Description

This web service searches for ExplanationOfBenefit (Claim) resources that meet the specified criteria. ExplanationOfBenefit (Claim) resources represent claims data received and processed by health plans, including services rendered to a patient and the cost information associated with those services. When used as part of the CMS Payer-to-Payer or Provider Access API, payment information is omitted.

Subject to configuration by the organization, this API can return resources built from pending claims, or claims processed or paid by an external organization. Resource information for these claims might be unverified, incomplete, or duplicative.

Request parameters

Name | Type | Optional | Array | Cardinality | Description
_count | number | Optional | Yes | | Number of results per page.
_id | token | Optional | Yes | | FHIR resource IDs for the desired resources. Can be used in combination with _count, _include, and _revInclude. All others will be ignored.
_include | string | Optional | Yes | | Used to indicate which referenced resources to include in the search bundle.
_revinclude | string | Optional | Yes | | Used to include Provenance or AuditEvent resources that refer to search results, when available.
billable-period-start | date | Optional | Yes | | Start date of the billing period for the claim. Only claims with billing periods that start within the date range specified by this parameter are returned. When omitted, the billing period start is not restricted. Only one of the following parameters can be used in a single request: billable-period-start, service-date, or service-start-date.
created | date | Optional | Yes | | Creation date of the claim.
identifier | token | Optional | Yes | | Claim ID(s). Multiple claims can be specified by including multiple values separated by commas. When included, only claims with a listed ID are returned. Patient-access search requests support searching for either the unique claim ID or the secondary member-facing ID. Provider-access and Payer-to-Payer requests only support searches for the unique claim ID. This parameter does not require that the system be specified, but when the system is included, for unique claim IDs, it is expected to equal "urn:oid:1.2.840.114350.1.13.X.1.7.2.677677", where X is a numeric value dependent on the server environment.
patient | reference | Required | Yes | | The patient for whom claims data is being retrieved.
service-date | date | Optional | Yes | | Range of service dates for the claim. Only claims with a service period that overlaps with the date range specified by this parameter are returned. When omitted, claim service dates are not restricted. Only one of the following parameters can be used in a single request: billable-period-start, service-date, or service-start-date.
service-start-date | date | Optional | Yes | | Date when services start for the claim. Only claims with a service start date within the date range specified by this parameter are returned. When omitted, the service start date is not restricted. Only one of the following parameters can be used in a single

request: billable-period-start, service-date, or service-start-date.
type | token | Optional | Yes | | The type(s) of claims to search for. The supported values are "institutional", "professional", "oral", and "pharmacy". Multiple types of claims can be returned by listing multiple values separated by commas. This parameter does not require that the system be specified, but when the system is included, it is expected to be equal to the following URL: http://terminology.hl7.org/CodeSystem/claim-type
use | token | Optional | Yes | | This value can be "claim", "preauthorization", or both, delimited by comma. If it is blank or contains both values, the response includes both claim and prior authorization data.
