Epic API ID | 11431
FHIR version | R4
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11431

Description

This is an outgoing web service that sends notifications upon updates to prior authorization requests.

To make use of this web service, prior authorization requests should be submitted using Claim $submit (Prior Auth) (R4). The synchronous response to a Claim $submit call might not represent the final decision on the authorization request; in that case, the system might, at the time of a final decision, asynchronously make an HTTP POST request following the “Response” format detailed below.

The authorization request information is structured in the same bundle as the response for the Claim $submit (Prior Auth) (R4) web service.

This functions similarly to an asynchronous 278R response but uses FHIR technology. It is based on the Da Vinci Prior Authorization Support implementation guide and the Subscriptions R5 Backport implementation guide.

Response

```

Response Elements

Name | Description | Is Optional | Is Array

resourceType (String) | The string “Bundle”. | false | false
type (String) | The string “history”. | false | false
entry (BundleEntry) | Notification bundle entries. The first entry in this array will be a BundleEntry with a SubscriptionStatus resource. The second entry will be a BundleEntry with a PAS ResponseBundle resource; this is the same response format as the synchronous response to the Claim $submit (Prior Auth) (R4) web service. | false | true

Types

BundleEntry

Name | Description | Is Optional | Is Array
link (BundleLink) | Links related to this entry. | false | true
fullUrl (String) | URL for the entry resource. | false | false
resource (Resource) | Entry resource. This will be a SubscriptionStatus for the first entry and a PAS ResponseBundle for the second entry. | false | false
request (BundleRequest) | Request metadata. | false | false
response (BundleResponse) | Response metadata. | false | false

BundleLink

Name | Description | Is Optional | Is Array
relation (String) | The string “self”. | false | false
url (String) | URL for the entry resource. This is the same as the entry’s fullUrl. | false | false

SubscriptionStatus

Name | Description | Is Optional | Is Array
resourceType (String) | The string “Parameters”. | false | false
parameter (Parameter) | Array of parameters of subscription information. This will contain one TopicParameter, one StatusParameter, one TypeParameter, and one NotificationEventParameter. | false | true

TopicParameter

Name | Description | Is Optional | Is Array
name (String) | The string “topic”. | false | false
valueCanonical (String) | The string “http://hl7.org/fhir/us/davinci-pas/SubscriptionTopic/PASSubscriptionTopic”. | false | false

StatusParameter

Name | Description | Is Optional | Is Array
name (String) | The string “status”. | false | false
valueCode (String) | The string “active”. | false | false

TypeParameter

Name | Description | Is Optional | Is Array
name (String) | The string “type”. | false | false
valueCode (String) | The string “event-notification”. | false | false

NotificationEventParameter

Name | Description | Is Optional | Is Array
name (String) | The string “notification-event”. | false | false
part (Parameter) | Array of parameter parts. This will contain one EventNumber, one EventTimestamp, and one EventFocus. | false | true

EventNumber

Name | Description | Is Optional | Is Array
name (String) | The string “event-number”. | false | false
valueString (String) | A monotonically increasing number unique to this notification. | false | false

EventTimestamp

Name | Description | Is Optional | Is Array
name (String) | The string “timestamp”. | false | false
valueInstant (Instant) | The timestamp of this notification being generated. | false | false

EventFocus

Name | Description | Is Optional | Is Array
name (String) | The string “focus”. | false | false
valueReference (Reference) | A reference to the ClaimResponse for this notification. | false | false

BundleRequest

Name | Description | Is Optional | Is Array
method (String) | The string “GET” for the SubscriptionStatus entry or “POST” for the ClaimResponse bundle entry. | false | false
url (String) | Representative URL of a change to the resource. “Subscription/$status” for the SubscriptionStatus entry, or “ClaimResponse/$submit” for the ClaimResponse bundle entry. | false | false

BundleResponse

Name | Description | Is Optional | Is Array
status (String) | The string “200 OK”. | false | false

Remarks

The response to this notification should have a successful HTTP status code (2xx) on a successful ingestion. If instead an HTTP error status code is returned, it will be logged. The content of the response to a notification is not stored or interpreted in any way beyond the status code.

Resource Support

* Supported request resources: ClaimResponse, Patient, Practitioner, PractitionerRole, Organization, CommunicationRequest, ServiceRequest

* Includes exactly one ClaimResponse per request

* Response must be an OperationOutcome or blank

Operation Support

* Create/update/delete is not supported on the Subscription resource, the handling of these actions is expected to be done as part of connection onboarding

* $status/$events are not supported

15.2.1 CRD Context Resource

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11434-CRD-Context-Resource.html
Epic API ID | 11434
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11434

Description

Coverage Requirements Discovery

Purpose: This is an overview covering Epic's payer-side support for a subset of Da Vinci Coverage Requirements Discovery (CRD) STU 2.1 (https://hl7.org/fhir/us/davinci-crd/STU2.1/) as a CRD server, focused on the ability to return whether prior auth is required for outpatient procedures.

The main value of this functionality is to inform providers when prior authorization is not needed, reducing administrative burden submitting and reviewing unnecessary prior authorizations.

Key Capabilities

Request requirements: The supported CDS Hooks are order-sign (https://cds-hooks.org/hooks/order-sign/) and appointment-book (https://cds-hooks.org/hooks/appointment-book/).

The request resources supported are ServiceRequest and MedicationRequest; these can be present in either the draftOrders bundle in an order-sign hook or referenced by the basedOn element of an Appointment in an appointment-book hook. MedicationRequests in an Appointment are a deviation from the STU 2.1 specification, which allows only ServiceRequests to be used in the basedOn element. Appointments that do not reference a ServiceRequest or MedicationRequest are not supported.

The request must include resources prefetched using the queries determined from CDS Discovery (https://cds-hooks.hl7.org/2.0/#discovery); the URL of this endpoint is "https://<payer server API base>/epic/2024/HL7DaVinciCRD/CoverageRequirementsDiscovery/cds-services". The server will not utilize any FHIR authorization information to query for referenced FHIR resources after receiving a CRD request.

If referenced resources are not included, the request might not be processed, or complete guidance might not be available. The request will also not be processed if the patient, coverage, or procedure cannot be matched to information available in Tapestry UM.

Some information, such as performing provider, is technically optional in a CRD request, but there might not be available guidance without this information present. Make sure to discuss with each payer you integrate with to ensure information they require will be available in your request.

When determining the service date to use when evaluating coverage requirements, the following elements are used. Other elements are not used.

* ServiceRequest.occurrencePeriod.start, MedicationRequest.dosageInstruction.timing.repeat.boundsPeriod.start

* ServiceRequest.occurrenceTiming.repeat.boundsPeriod.start

* Appointment.start

* Appointment.requestedPeriod.start

Work with payers you integrate to understand what code systems they will provide guidance for.

Response info:

For each service where a decision is made, the response will contain an update System Action (https://cds-hooks.hl7.org/2.0/#system-action) for the ServiceRequest or MedicationRequest to update it with a Coverage Information extension (https://hl7.org/fhir/us/davinci-crd/STU2.1/StructureDefinition-ext-coverage-information.html) containing the decision. This includes ServiceRequest or MedicationRequest resources referenced by an Appointment; Appointments will not be updated with coverage information.

The ServiceRequest or MedicationRequest resource will be included in the system action with a limited subset of information from the original request.

The coverage-information extension is built of multiple inner extensions; we support the extensions listed below. Other extensions on the Coverage Information are not currently supported.

* covered

* pa-needed

* info-needed

* doc-needed

* doc-purpose

* reason

* detail

* coverage-assertion-id

* coverage

* date

* expiry-date

15.2.2 CRD Prefetch Resource

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11435-CRD-Prefetch-Resource.html

15.2.3 CRD Request

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11427-CRD-Request.html
Epic API ID | 11427
FHIR version | FHIR (unversioned)

Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0, Clinicians or Administrative Users
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11427

Description

URL Template: POST
api/epic/2024/HL7DaVinciCRD/CoverageRequirementsDiscovery/cds-services/CoverageRequirementsDiscovery

Request

The HL7 FHIR Da Vinci Coverage Requirements Discovery (CRD) STU 2.1 (https://hl7.org/fhir/us/davinci-crd/STU2.1/) functionality is intended to allow health systems to query a health plan to determine whether services or medications require prior authorizations and if so, whether there are any additional documentation requirements or specific guidance regarding coverage.

CRD requests can only be initiated using the CDS Hooks framework (see https://fhir.epic.com/Documentation?docId=cds-hooks for details on Epic's support).

Epic supports two hooks for the purposes of triggering CRD:

* The "order-sign" CDS Hook (https://cds-hooks.hl7.org/hooks/order-sign/STU1/order-sign/) that occurs when an order is signed. CRD requests triggered by this hook contain a "draftOrders" bundle of ServiceRequest or MedicationRequest resources.

* The "appointment-book" CDS Hook (https://cds-hooks.hl7.org/hooks/appointment-book/STU1/appointment-book/) that occurs when an appointment is scheduled. CRD Requests triggered by this hook contain an "appointments" bundle of Appointment resources.

To improve performance, resources are be bundled directly into each CRD request instead of being retrieved through additional FHIR calls. This is done by configuring CDS Hooks prefetch templates for each type of hook. (See https://cds-hooks.hl7.org/STU2/#providing-fhir-resources-to-a-cds-service). Each prefetch template adds a resource to the request message under the "prefetch" element.

The extension element of a CRD request message includes at least one metadata field. "Extension:davinci-crd.configuration.coverage-info", when set to true, indicates that the receiver should respond to the request with a response type of "coverage-info" and should indicate whether the requested service is a covered benefit and whether prior authorization is required.

Response

Epic Health Systems expect CRD response messages to contain an empty "cards" array and a "systemActions" array within which the payer shall share whether the requested services and medications are covered and whether they require prior authorization.

For each service or medication for which a decision has been made, the systemActions element shall contain a slice with a type of "update" and a corresponding ServiceRequest or MedicationRequest resource, which should contain a coverage-information extension (https://hl7.org/fhir/us/davinci-crd/STU2.1/StructureDefinition-ext-coverage-information.html).

Please note that modifications to the ServiceRequest or MedicationRequest outside of the coverage-information extension will be ignored or could cause the message to be discarded.

15.2.4 CRD System Action

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11436-CRD-System-Action.html
Epic API ID | 11436
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11436

Description

Coverage Requirements Discovery

Purpose: This is an overview covering Epic's payer-side support for a subset of Da Vinci Coverage Requirements Discovery (CRD) STU 2.1 (https://hl7.org/fhir/us/davinci-crd/STU2.1/) as a CRD server, focused on the ability to return whether prior auth is required for outpatient procedures.

The main value of this functionality is to inform providers when prior authorization is not needed, reducing administrative burden submitting and reviewing unnecessary prior authorizations.

Key Capabilities

Request requirements: The supported CDS Hooks are order-sign (https://cds-hooks.org/hooks/order-sign/) and appointment-book (https://cds-hooks.org/hooks/appointment-book/).

The request resources supported are ServiceRequest and MedicationRequest; these can be present in either the draftOrders bundle in an order-sign hook or referenced by the basedOn element of an Appointment in an appointment-book hook. MedicationRequests in an Appointment are a deviation from the STU 2.1 specification, which allows only ServiceRequests to be used in the basedOn element. Appointments that do not reference a ServiceRequest or MedicationRequest are not supported.

The request must include resources prefetched using the queries determined from CDS Discovery (https://cds-hooks.hl7.org/2.0/#discovery); the URL of this endpoint is "https://<payer server API base>/epic/2024/HL7DaVinciCRD/CoverageRequirementsDiscovery/cds-services". The server will not utilize any FHIR authorization information to query for referenced FHIR resources after receiving a CRD request.

If referenced resources are not included, the request might not be processed, or complete guidance might not be available. The request will also not be processed if the patient, coverage, or procedure cannot be matched to information available in Tapestry UM.

Some information, such as performing provider, is technically optional in a CRD request, but there might not be available guidance without this information present. Make sure to discuss with each payer you integrate with to ensure information they require will be available in your request.

When determining the service date to use when evaluating coverage requirements, the following elements are used. Other elements are not used.

* ServiceRequest.occurrencePeriod.start, MedicationRequest.dosageInstruction.timing.repeat.boundsPeriod.start

* ServiceRequest.occurrenceTiming.repeat.boundsPeriod.start

* Appointment.start

* Appointment.requestedPeriod.start

Work with payers you integrate to understand what code systems they will provide guidance for.

Response info:

For each service where a decision is made, the response will contain an update System Action (https://cds-hooks.hl7.org/2.0/#system-action) for the ServiceRequest or MedicationRequest to update it with a Coverage Information extension (https://hl7.org/fhir/us/davinci-crd/STU2.1/StructureDefinition-ext-coverage-information.html) containing the decision. This includes ServiceRequest or MedicationRequest resources referenced by an Appointment; Appointments will not be updated with coverage information.

The ServiceRequest or MedicationRequest resource will be included in the system action with a limited subset of information from the original request.

The coverage-information extension is built of multiple inner extensions; we support the extensions listed below. Other extensions on the Coverage Information are not currently supported.

* covered
* pa-needed
* info-needed
* doc-needed
* doc-purpose
* reason
* detail
* coverage-assertion-id
* coverage
* date
* expiry-date

15.2.5 DTR Outgoing Questionnaire.$log-questionnaire-errors

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11430-DTR-Outgoing-Questionnaire-log-questionnaire-errors.html
Epic API ID | 11430
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11430

Description

Epic Payer Support for DTR

Epic supports compliance with the HL7 Da Vinci Documentation Templates and Rules (DTR) implementation guide version 2.1.0. This service enables payers to provide structured documentation requirements and questionnaires to requesting systems using FHIR.

Endpoint & Availability

Epic DTR Base URL (separate from generic FHIR server base URL):
https://<hostname>/<IC-Instancename>/api/epic/2024/HL7DaVinciDTR/DTROperations

Available: February 2026

Purpose

The DTR services support collection of clinical documentation needed to satisfy payer requirements. DTR may be invoked standalone or as part of CRD or PAS workflows.

Key Capabilities

* Provide standard and adaptive questionnaires
* Support standalone, CRD-initiated, and PAS-initiated DTR workflows
* Adaptive question progression using $next-question
* Optional logging of questionnaire errors
* ValueSet expansion support

Requirements

Required request properties

* Patient
* Coverage
* ServiceRequest(s) AND/OR Context identifier
* CRD-initiated DTR: requires BOTH ServiceRequest and Context
* Standalone DTR: requires ServiceRequest(s) only

* PAS-initiated DTR: requires Context only

* Referenced resources

ServiceRequest coding requirements

* CPT codes using http://www.ama-assn.org/go/cpt

* HCPCS codes using http://www.cms.gov/Medicare/Coding/HCPCSReleaseCodeSets

Practitioner / PractitionerRole / Location requirements

* Referenced resource must include NPI identifiers.

Supported Operations

Questionnaire/$questionnaire-package

URL: POST https://<hostname>/<IC-Instancename>/api/epic/2024/HL7DaVinciDTR/DTROperations/Questionnaire/$questionnaire-package

* Supports standard and adaptive questionnaires

* Must include Patient, Coverage(s), ServiceRequest(s), and referenced resources

* Questionnaire profiles must be declared

* QuestionnaireResponse must conform to DTR profiles

Questionnaire/$next-question

URL: POST
https://<hostname>/<IC-Instancename>/api/epic/2024/HL7DaVinciDTR/DTROperations/Questionnaire/$next-question

* Requires adaptive QuestionnaireResponse

* Contained adaptive Questionnaire must be present

* Response may add questions as well as add/update answers to questions

Questionnaire/$log-questionnaire-errors

URL: POST https://<hostname>/<IC-Instancename>/api/epic/2024/HL7DaVinciDTR/DTROperations/Questionnaire/$log-questionnaire-errors

* Only supported for questionnaires that allow error logging

* Unsupported attempts return OperationOutcome

ValueSet/$expand

URL: GET https://<hostname>/<IC-Instancename>/api/epic/2024/HL7DaVinciDTR/DTROperations/ValueSet/$expand

* Must specify ValueSet URL via query parameters.

15.2.6 DTR Outgoing Questionnaire.$next-question

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11429-DTR-Outgoing-Questionnaire-next-question.html
Epic API ID | 11429

Description

The HL7 FHIR Da Vinci Documentation Templates and Rules (DTR) STU 2.1 (https://hl7.org/fhir/us/davinci-dtr/STU2.1/) functionality enables health plans to express their documentation requirements for prior authorizations and to allow health systems to gather and submit that information in a streamlined manner.

When a health plan responds to a CRD (https://hl7.org/fhir/us/davinci-crd/STU2.1/) or PAS (https://hl7.org/fhir/us/davinci-pas/STU2.1/) message indicating that clinical or administrative data is required, and optionally includes a canonical questionnaire, the health system performs a $questionnaire-package operation (https://hl7.org/fhir/us/davinci-dtr/STU2.1/OperationDefinition-questionnaire-package.html).

Health systems use the $questionnaire-package operation to retrieve a DTR Standard Questionnaire resource (https://hl7.org/fhir/us/davinci-dtr/STU2.1/StructureDefinition-dtr-std-questionnaire.html) that is shown to an appropriate user.

The health system then builds a QuestionnaireResponse resource from the answered questionnaire and sends it to the health plan as part of the PAS request process.

The HL7 FHIR Da Vinci Documentation Templates and Rules (DTR) STU 2.1 (https://hl7.org/fhir/us/davinci-dtr/STU2.1/) functionality enables health plans to express their documentation requirements for prior authorizations and to allow health systems to gather and submit that information in a streamlined manner.

When a health plan responds to a CRD (https://hl7.org/fhir/us/davinci-crd/STU2.1/) or PAS (https://hl7.org/fhir/us/davinci-pas/STU2.1/) message indicating that clinical or administrative data is required, and optionally includes a canonical questionnaire, the health system performs a $questionnaire-package operation (https://hl7.org/fhir/us/davinci-dtr/STU2.1/OperationDefinition-questionnaire-package.html).

Health systems use the $questionnaire-package operation to retrieve a DTR Standard Questionnaire resource (https://hl7.org/fhir/us/davinci-dtr/STU2.1/StructureDefinition-dtr-std-questionnaire.html) that is shown to an appropriate user.

The health system then builds a QuestionnaireResponse resource from the answered questionnaire and sends it to the health plan as part of the PAS request process.

15.2.8 DTR Outgoing ValueSet.$expand

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11428-DTR-Outgoing-ValueSet-expand.html
Epic API ID | 11428
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11428

Description

The HL7 FHIR Da Vinci Documentation Templates and Rules (DTR) STU 2.1 (https://hl7.org/fhir/us/davinci-dtr/STU2.1/) functionality enables health plans to express their documentation requirements for prior authorizations and to allow health

systems to gather and submit that information in a streamlined manner.

When a health system performs a $questionnaire-package operation and receives a Questionnaire resource, that resource might contain questions (questionnaire.item) of type choice, open-choice, or quantity. These types of questions are defined by either a list of values embedded within the item (item.answerOption) or by referencing a ValueSet resource.

Per the DTR specification, value sets containing forty or fewer elements are expected to be contained within the questionnaire using the answerOption element or pre-expanded and included as ValueSet resources in the $questionnaire-package's response bundle.

Value sets containing greater than forty elements can be referenced by an item but not included in the response bundle, in which case the health system performs a ValueSet $expand operation (https://hl7.org/fhir/R4/valueset-operation-expand.html) against the DTR endpoint immediately after receiving the questionnaire, once for each value set that needs expansion.

Sample Request

Click to expand

```
https://hostname/instance/api/FHIR/R4/ValueSet/$expand?url={CANONICAL}&activeOnly=true&excludeNotForUI=true
```

Sample Response

Click to expand

15.2.9 PAS Claim Response Submit

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11433-PAS-Claim-Response-Submit.html
Epic API ID | 11433
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11433

Description

PAS Auth Request

Purpose: This incoming web service enables submission of prior authorization requests to the UM system using FHIR technology. It can be used standalone or following Coverage Requirements Discovery (CRD) when prior authorization is determined necessary, or after Documentation Templates and Rules (DTR) interactions to submit QuestionnaireResponse resources alongside the initial authorization request. This service functions similarly to the incoming 278R Request but uses FHIR instead, based on the Da Vinci Clinical Data Exchange Guide v2.1.0 for CDex.

Key Capabilities

* Submit initial prior authorization requests

* Submit updates to existing authorizations (using related claim references)

* Support for multiple service types including medical procedures, DME, and home health services

* Real-time adjudication and authorization responses

* Attachment support via DocumentReference and QuestionnaireResponse

* Submit QuestionnaireResponse resources from DTR workflows alongside authorization requests

* Submit unsolicited supporting documents (DocumentReference) and questionnaire responses (QuestionnaireResponse) from DTR with the initial authorization request via Claim.supportingInfo

Resource Support:

* Supported request resources: Claim, Coverage, Patient, Practitioner, PractitionerRole, Organization, Location, ServiceRequest, DeviceRequest, DocumentReference, QuestionnaireResponse

* Supported response resources: ClaimResponse, Patient, Practitioner, PractitionerRole, Organization, ServiceRequest, CommunicationRequest

* Must include exactly one Claim resource per request

* Includes exactly one ClaimResponse resource per successful response

Identifier Handling:

* Patient identifiers support SSN, Member ID, and custom Identity IDs

* Practitioner/Organization identifiers support TIN and NPI

* Identifier priority based on use field (official/usual higher priority)

Contact Information Priority:

* Patient: home, work, mobile

* Other resources: work, mobile

* Higher rank values take precedence

Extensions & Modifications:

* Level of service type extension must be in an array

* Home health care information extension uses custom date element structure

* Item trace number format follows TRN segment mapping

Update Message Requirements:

* Use Claim.extension:authorizationNumber or Claim.extension:administrationReferenceNumber with preAuthRef from previous ClaimResponse

* Certification type rules:

* Initial (I): cannot use infoChanged

* Revision (S): cannot use added

* Cancel (3): requires infoCancelledFlag modifier extension

For $submit, item.quantity is required on items.

15.2.10 PAS Outgoing Binary Fetch

15.2.11 PAS Outgoing Claim.$inquire

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11320-PAS-Outgoing-Claim-inquire.html
Epic API ID | 11320
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11320

Description

Description

The HL7 FHIR Da Vinci Prior Authorization Support (PAS) STU 2.1 (https://hl7.org/fhir/us/davinci-pas/STU2.1/) functionality is intended to streamline the prior authorization process using a FHIR-based data exchange rather than the previous ANSI X12-based electronic messaging specification as well as to encourage automation throughout the process.

Complex prior authorization requests can take some time to adjudicate. Health systems may choose to inquire about the status of an outstanding request using the Claim $inquire operation (https://hl7.org/fhir/us/davinci-pas/STU2.1/StructureDefinition-profile-claim-inquiry.html).

15.2.12 PAS Outgoing Claim.$submit

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11319-PAS-Outgoing-Claim-submit.html
Epic API ID | 11319
FHIR version | FHIR (unversioned)
Categories | CMS Outgoing
API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11319

Description

Description

The HL7 FHIR Da Vinci Prior Authorization Support (PAS) STU 2.1 (https://hl7.org/fhir/us/davinci-pas/STU2.1/) functionality is intended to streamline the prior authorization process using a FHIR-based data exchange rather than the previous ANSI

X12-based electronic messaging specification as well as to encourage automation throughout the process.

Health systems submit requests for prior authorization by performing the PAS Claim.$submit operation, which sends a PAS Request Bundle (https://hl7.org/fhir/us/davinci-pas/STU2.1/StructureDefinition-profile-pas-request-bundle.html) to the health plan.

This bundle includes a PAS Claim resource, which contains information that defines the patient, their coverage, the requested service, and its supporting information.

If a prior Coverage Requirements Discovery (CRD) (https://hl7.org/fhir/us/davinci-crd/STU2.1/) response indicated that additional clinical information was required to support a prior authorization request, and that information was collected using the Documentation Templates and Rules (DTR) (https://hl7.org/fhir/us/davinci-dtr/STU2.1/) process, the health system may include that information in the request bundle of the intial prior authorization request submitted via the Claim $submit operation.

15.2.13 PAS Outgoing Parameters.$submit-attachment

File: site/apis/15-CMS-Outgoing/2-FHIR-unversioned/11321-PAS-Outgoing-Parameters-submit-attachment.html

API type | Industry-Standard
USCDI | No
Supports OAuth 2.0 | True
Supported user types | Backend Systems and Non-OAuth 2.0
Performs scope validation | False
Source | https://fhir.epic.com/Specifications?api=11321

Description

Description

The HL7 FHIR Da Vinci Prior Authorization Support (PAS) STU 2.1 (https://hl7.org/fhir/us/davinci-pas/STU2.1/) functionality is intended to streamline the prior authorization process using a FHIR-based data exchange rather than the previous ANSI X12-based electronic messaging specification as well as to encourage automation throughout the process.

When a PAS response indicates the need for clinical information and the Documentation Templates and Rules (DTR) (https://hl7.org/fhir/us/davinci-dtr/STU2.1/) process is performed, health systems can use the CDEX $submit-attachment operation (https://hl7.org/fhir/us/davinci-cdex/STU2.1/OperationDefinition-submit-attachment.html) to send this additional clinical information to the health plan to support their prior authorization request.

Typically, the $submit-attachment operation is used to respond asynchronously to solicited attachment requests. Unsolicited attachments are instead included in the initial PAS claim submission operation bundle.

15.3 CMS Outgoing: Non-FHIR

File: site/apis/15-CMS-Outgoing/3-Non-FHIR/index.html
