0 Welcome to FHIR®

URL: https://hl7.org/fhir/STU3/index.html

This page is part of the FHIR Specification (v3.0.2: STU 3). The current version which supercedes this version is 4.0.1. For a full list of available versions, see the Directory of published versions

First time here? See the executive summary, the developer's introduction, clinical introduction, or architect's introduction, and then the FHIR overview / roadmap & Timelines. See also the open license (and don't miss the full Table of Contents or you can search this specification).

Technical Corrections:

* Oct-24 2019: Corrections to invariants & regexes

* Apr-19 2017: Corrections to invariants & generated conformance resources, and add note about isSummary

Level 1 Basic framework on which the specification is built

Foundation

Base Documentation, XML, JSON, REST API + Search, Data Types, Extensions

Level 2 Supporting Implementation, and binding to external specifications

Implementer Support

Downloads, Common Use Cases, Testing

Security & Privacy

Security, Consent Provenance AuditEvent

Conformance

StructureDefinition, CapabilityStatement, ImplementationGuide, Profiling

Terminology

CodeSystem, ValueSet, ConceptMap, Terminology Svc

Linked Data

RDF

Level 3 Linking to real world concepts in the healthcare system

Administration

Patient, Practitioner, Device, Organization, Location, Healthcare Service

Level 4 Record-keeping and Data Exchange for the healthcare process

Clinical

Allergy, Problem, CarePlan, DetectedIssue, RiskAssessment, etc.

Diagnostics

Observation, Report, Specimen, ImagingStudy,Genomics,etc

Medications

Order, Dispense, Administration, Statement, Immunization, etc.

Workflow

Task, Appointment, Schedule, Referral, PlanDefinition, etc.

Financial

Claim, Account, Coverage, Claim, EligibilityRequest, ExplanationOfBenefit, etc.

Level 5 Providing the ability to reason about the healthcare process

Clinical Reasoning

Library, ServiceDefinition & GuidanceResponse, Measure/MeasureReport, etc

Additional Resources will be added in the future. A list of hypothesized resources can be found on the HL7 wiki . Feel free to add any you think are missing or engage with one of the HL7 Work Groups to submit a proposal to define a resource of particular interest.

1.3 Profiles defined as part of FHIR

URL: https://hl7.org/fhir/STU3/profilelist.html

This page is part of the FHIR Specification (v3.0.2: STU 3). The current version which supercedes this version is 4.0.1. For a full list of available versions, see the Directory of published versions

1.3 Profiles defined as part of FHIR

This specification is a common platform standard that must be adapted to particular use cases. Some particular use cases are common or important enough to be described as a part of the specification itself. These are published as a "Profile" - a group of Structure Definitions (Constraints or Extensions), Value Sets, and examples that are all defined with a common purpose. Additional profiles may be registered on the HL7 FHIR registry at http://hl7.org/fhir/registry

Name | Description | Kind | FMM

General

EHRS FM Record Lifecycle Event - Audit Event | Defines the elements to be supported within the AuditEvent resource in order to conform with the Electronic Health Record System Functional Model Record Lifecycle Event standard | profiles

Common extensions for Coding data type | Defines "common" extensions for use with the DataElement data type | extensions

CQIF Extensions | Defines common extensions used by the Clinical Reasoning Module. | extensions

CQIF Guidance Extensions | Defines common extensions used by the Decision Support-Specific Clinical Quality Improvement Framework. | extensions

Element-definition Extensions for use by FHIR Implementers | A set of extensions that constrain data elements, whether used in DataElements, StructureDefinitions or Questionnaires | extensions

ISO 11179 Element Definition Profile | A profile showing how to use ElementDefinition to express 11179 Data_Element and Concept_Elements. At present, the profile is a partially-complete place-holder | extensions, search parameters

DataElement constraint on ElementDefinition data type | Identifies how the ElementDefinition data type is used when it appears within a data element | profiles

Common extensions for ElementDefinition data type | Defines "common" extensions for use with the DataElement data type | extensions

Event Pattern HL7 Extensions | This profile defines extensions that can be used to provide alignment with the Event workflow pattern data elements for concepts that may be generally applicable but may be sufficiently uncommon that they are more appropriate to include as extensions than as core properties of the resource. See the workflow module for more discussion about this specification that are typically involved in workflow. | extensions

General Extensions for use by FHIR Implementers | A set of general extensions defined for the convenience of implementers that use FHIR resources | extensions

Common extensions for HumanName data type | Defines "common" extensions for use with the HumanName data type | extensions

Common extensions for Identifier data type | Defines "common" extensions for use with the Identifier data type | extensions

ISO 21090 Data Type Extensions | Extra ISO 21090 features not included in data types because of core design policy | extensions

International Realm Pharmacy Extensions Profile | Contains a number of pharmacy domain extensions relevant to a number of medication-related resources. | extensions

EHRS FM Record Lifecycle Event - Provenance | Defines the elements to be supported within the Provenance resource in order to conform with the Electronic Health Record System Functional Model Record Lifecycle Event standard | profiles

CQIF-Questionnaire | Adds the ability to define behavior as part of a questionnaire. | profiles

Extensions for rendering data elements | A set of extensions dealing with controlling how particular data elements are rendered when displayed. Initially created for questionnaires, but potentially useable elsewhere. | extensions

Common extensions for Timing data type | Defines "common" extensions for use with the Timing data type | extensions

Metadata HL7 Extensions | Defines common extensions used with or related to conformance and knowledge resources | extensions

AllergyIntolerance

openEHR Archetype Profile | A set of extensions that define how the parts of the openEHR RiskOfAdverseReaction archetype that are not generaly encountered by implementers are represented | extensions

AllergyIntolerance HL7 Extensions | Defines common extensions used with or related to the AllergyIntolerance resource | extensions

AuditEvent

AuditEvent HL7 Extensions | Defines common extensions used with or related to the AuditEvent resource | extensions

Bundle

Common extensions for bundle-related types | Defines "common" extensions for use with the Bundle resource and contained elements | extensions

CapabilityStatement

Common CapabilityStatement extensions | Common extensions for use with the CapabilityStatement resource | extensions

CarePlan

Common Care Plan Extensions | A set of commonly used extensions that don't make the usage requirements for inclusion in the resource itself | extensions

CodeSystem

CodeSystem HL7 Extensions | Defines common extensions used with or related to the CodeSystem resource | extensions, search parameters

Shareable CodeSystem | Enforces the minimum information set for the value set metadata required by HL7 and other organisations that share and publish value sets | profiles

Communication

Communication HL7 Extensions | Defines common extensions used with or related to the Communication resource | extensions

CommunicationRequest

CommunicationRequest HL7 Extensions | Defines common extensions used with or related to the CommunicationRequest resource | extensions

Composition

Clinical Document Profile for Composition | The base Composition is a general resource for compositions or documents about any kind of subject that might be encountered in healthcare including such things as guidelines, medicines, etc. A clinical document is focused on documents related to the provision of care process, where the subject is a patient, a group of patients, or a closely related concept. A clinical document has additional reqiurements around confidentiality that do not apply in the same way to other kinds of documents | profiles, extensions

ConceptMap

ConceptMap HL7 Extensions | Defines common extensions used with or related to the ConceptMap resource | extensions

Condition

Condition HL7 Extensions | Defines common extensions used with or related to the Condition resource | extensions, search parameters

Consent

Consent HL7 Extensions | Defines common extensions used with or related to the Consent resource | extensions

Contract

| to do | profiles

DataElement

Standard DataElement Extensions | This profile describes common extensions that are used with DataElements | extensions

ISO 11179 Data Element Profile | A profile showing how to use DataElement to express 11179 Data_Element and Concept_Elements. At present, the profile is a partially-complete place-holder | extensions

Device

Device HL7 Extensions | Defines common extensions used with or related to the Device resource | extensions, search parameters

DeviceRequest

DeviceRequest HL7 Extensions | Defines common extensions used with or related to the DeviceRequest resource | extensions

DeviceUseStatement

DeviceUseStatement HL7 Extensions | Defines common extensions used with or related to the DeviceUseStatement resource

DiagnosticReport

Example Lipid Profile | Describes how the lab report is used for a standard Lipid Profile - Cholesterol, Triglyceride and Cholesterol fractions. Uses LOINC codes | profiles | 1

DiagnosticReport HL7 Extensions | Defines common extensions used with or related to the DiagnosticReport resource | extensions

DiagnosticReport-Genetics | Describes how the DiagnosticReport resource is used to report structured genetic test results | profiles, extensions, search parameters

Profile for HLA Genotyping Results | Describes how the HLA genotyping results | profiles, extensions
Encounter
Encounter HL7 Extensions | Defines common extensions used with or related to the Encounter resource | extensions
FamilyMemberHistory
Family member history for genetics analysis | Adds additional information to a family member history supporting both the capture of mother/father relationships as well as additional observations necessary to enable genetics-based risk analysis for patients | profiles, extensions
Family Member History HL7 Extensions | Defines common extensions used with or related to the FamilyMemberHistory resource | extensions
Flag
Flag HL7 Extensions | Defines common extensions used with or related to the Flag resource | extensions
Goal
FHIR Core Goal Profile | This profile holds core Goal extensions | extensions
Immunization
Immunization HL7 Extensions | Defines common extensions used with or related to the Immunization resource
ImmunizationRecommendation
ImmunizationRecommendation HL7 Extensions | Defines common extensions used with or related to the ImmunizationRecommendation resource
ImplementationGuide
FHIR Core ImplementationGuide Profile | This profile holds core ImplementationGuide extensions | extensions
Location
Location HL7 Extensions | Defines common extensions used with or related to the Location resource | extensions, search parameters
Medication
Medication HL7 Extensions | Defines common extensions used with or related to the Medication resource | extensions
MedicationAdministration
MedicationAdministration HL7 Extensions | Defines common extensions used with or related to the MedicationAdministration resource
MedicationDispense
MedicationDispense HL7 Extensions | Defines common extensions used with or related to the MedicationDispense resource | extensions
MedicationRequest
MedicationRequest HL7 Extensions | Defines common extensions used with or related to the MedicationRequest resource
MedicationStatement
MedicationStatement HL7 Extensions | Defines common extensions used with or related to the MedicationStatement resource | extensions
MessageHeader
Common extensions for message header | Defines "common" extensions for use with the messageheader resource and contained elements | extensions
Observation
Device Metric Observation Profile | This profile describes the direct or derived, qualitative or quantitative physiological measurement, setting, or calculation data produced by a medical device or a device component. | profiles
Observation HL7 Extensions | Defines common extensions used with or related to the Observation resource | extensions
Observation-genetics | Describes how the observation resource is used to report structured genetic test results | profiles, extensions, search parameters
Vital Signs Profile | Defines constraints and extensions on the Observation resource for use in querying and retrieving Vital Signs information. | profiles
OperationOutcome
Standard OperationOutcome Extensions | This profile describes common extensions that are used with OperationOutcomes | extensions
Organization
Organization HL7 Extensions | Defines common extensions used with or related to the Organization resource | extensions, search parameters
Patient
Patient HL7 Extensions | Defines common extensions used with or related to the Patient resource | extensions, search parameters
Practitioner
Practitioner HL7 Extensions | Defines common extensions used with or related to the Practitioner resource | extensions
PractitionerRole
PractitionerRole HL7 Extensions | Defines common extensions used with or related to the PractitionerRole resource | extensions
Procedure
Procedure HL7 Extensions | Defines common extensions used with or related to the Procedure resource | extensions
ProcedureRequest
ProcedureRequest-Genetics | Describes how the ProcedureRequest resource is used to for genetics | profiles, extensions
Procedure Request HL7 Extensions | Defines common extensions used with or related to the Procedure Request resource | extensions
Questionnaire
Core extensions for Questionnaire | Contains standard extensions for Questionnaire, amongst others for validation | extensions
QuestionnaireResponse
Core extensions for QuestionnaireResponse | Contains standard extensions for QuestionnaireResponse, amongst others for validation | extensions
ReferralRequest
ReferralRequest HL7 Extensions | Defines common extensions used with or related to the ReferralRequest resource | extensions
SearchParameter
Standard Search Parameter Extensions | This profile describes common extensions that are used with Search Parameters
Specimen
Specimen HL7 Extensions | Defines common extensions used with or related to the Specimen resource | extensions
StructureDefinition
Standard Structure Definition Extensions | This profile describes common extensions that are used with Structure Definitions | extensions
Task
Task HL7 Extensions | Defines common extensions used with or related to the Task resource | extensions
ValueSet
ValueSet HL7 Extensions | Defines common extensions used with or related to the ValueSet resource | extensions, search parameters
Shareable ValueSet | Enforces the minimum information set for the value set metadata required by HL7 and other organisations that share and publish value sets | profiles

1.5 Defined RESTful API Operations

URL: https://hl7.org/fhir/STU3/operationslist.html

This page is part of the FHIR Specification (v3.0.2: STU 3). The current version which supercedes this version is 4.0.1. For a full list of available versions, see the Directory of published versions

1.5 Defined RESTful API Operations

The RESTful API defines a set of common interactions (read, update, search, etc.) performed on a repository of typed resources. For further information concerning how operations are defined and invoked, see Extended Operations on the RESTful API.

This is a full list of the operations defined by this specification:

Base Operations (All resource types)
Validate a resource | [base]/[Resource]/$validate | [base]/[Resource]/[id]/$validate
Access a list of profiles, tags, and security labels | [base]/$meta | [base]/[Resource]/$meta | [base]/[Resource]/[id]/$meta
Add profiles, tags, and security labels to a resource | [base]/[Resource]/[id]/$meta-add
Delete profiles, tags, and security labels for a resource | [base]/[Resource]/[id]/$meta-delete
Operations Defined by Resource Types
Apply | [base]/ActivityDefinition/[id]/$apply
Data Requirements | [base]/ActivityDefinition/[id]/$data-requirements
Fetch a subset of the CapabilityStatement resource | [base]/CapabilityStatement/$subset | [base]/CapabilityStatement/[id]/$subset
Test if a server implements a client's required operations | [base]/CapabilityStatement/$implements | [base]/CapabilityStatement/[id]/$implements
Test if a server implements a client's required operations | [base]/CapabilityStatement/$conforms
Concept Look Up & Decomposition | [base]/CodeSystem/$lookup
Subsumption Testing | [base]/CodeSystem/$subsumes | [base]/CodeSystem/[id]/$subsumes
Code Composition based on supplied properties | [base]/CodeSystem/$compose | [base]/CodeSystem/[id]/$compose
Generate a Document | [base]/Composition/$document | [base]/Composition/[id]/$document
Concept Translation | [base]/ConceptMap/$translate | [base]/ConceptMap/[id]/$translate
Closure Table Maintenance | [base]/$closure
Fetch Encounter Record | [base]/Encounter/[id]/$everything

Find patient matches using MPI based logic | [base]/Patient/$match
Fetch Patient Record | [base]/Patient/$everything | [base]/Patient/[id]/$everything
Apply | [base]/PlanDefinition/[id]/$apply
Data Requirements | [base]/PlanDefinition/[id]/$data-requirements
Populate Questionnaire | [base]/Questionnaire/$populate | [base]/Questionnaire/[id]/$populate
Generate HTML for Questionnaire | [base]/Questionnaire/$populatehtml | [base]/Questionnaire/[id]/$populatehtml
Generate a link to a Questionnaire completion webpage | [base]/Questionnaire/$populatelink | [base]/Questionnaire/[id]/$populatelink
Evaluate | [base]/ServiceDefinition/[id]/$evaluate
Data Requirements | [base]/ServiceDefinition/[id]/$data-requirements
Build Questionnaire | [base]/StructureDefinition/$questionnaire | [base]/StructureDefinition/[id]/$questionnaire
Model Instance Transformation | [base]/StructureMap/$transform | [base]/StructureMap/[id]/$transform
Value Set Expansion | [base]/ValueSet/$expand | [base]/ValueSet/[id]/$expand
Value Set based Validation | [base]/ValueSet/$validate-code | [base]/ValueSet/[id]/$validate-code

Notes:

* The special operations on the meta element also operate on previous versions of a resource (/_history/). They are the only operations that can manipulate versions other than the "current" version.

* Implementation Guides can define additional operations

1.5.1 Services Defined by the FHIR specification

This specification defines a set of services, which are business level aggregations of Resources and Operations that provide a defined package of functionality that correspond to an identified business need.

Note that in addition to the services defined in this specification, many implementation guides define business level services.

This table lists the services currently defined:

Name | Description | Links

Terminology Service | A service that lets healthcare applications make use of codes, code systems, and value sets without having to become experts in the fine details of the code system, value set and concept map resources, and the underlying code systems and terminological principles. The service provides the following functionality: Defining and managing code systems, value sets, and concept maps Code lookup & Validation Value Set Expansion (including for UI data entry support) Value Set Validation Translations between code systems Subsumption testing and other logical analyses Maintaining a closure table | Capability statement module

Conformance Service | A service that provides the underlying services needed to test whether resources conform to the rules defined by the FHIR specification and applicable implementation guides, and to help author implementation guides. The service provides the following functionality: Defining and managing structure definitions, data elements, Capability statements, search parameters, and operation & compartment definitions Resource Validation Comparing and subsetting Capability statements | To be developed

Knowledge Repository | A service that provides basic retrieval and maintenance functionality for clinical knowledge artifacts. The service provides the following functionality: Defining and managing plan and activity definitions (e.g. order sets, protocols, decision support rules, documentation templates, etc.), libraries, and measures Search and retrieval of knowledge artifacts Data requirements analysis of knowledge artifacts | Capability statement module

Measure Processor | A service that provides measure evaluation functionality. The service provides the following functionality: Searching and retrieval of measure definitions Evaluation of measures for patients and populations Data requirements analysis of measure definitions | Capability statement module

Possible candidate Business Services for future versions:

* Conversion Service (using mapping language, and also iso-semantic transforms in a resource)
* Questionnaire related finctionality (though see SDC)
* Patient Registration & Reconciliation service (per IXS)
* Medication Management service (home specific variant?)
* Clinical Data Repository
* Clinical Task Manager
* Comminications Manager
* ...?

Note that there is already past & current work on some of these in HL7 (though not necessarily FHIR specific).

1.9 Getting Started with FHIR

URL: https://hl7.org/fhir/STU3/modules.html

This page is part of the FHIR Specification (v3.0.2: STU 3). The current version which supercedes this version is 4.0.1. For a full list of available versions, see the Directory of published versions

1.9 Getting Started with FHIR

FHIR is a platform specification that defines a set of capabilities use across the healthcare process, in all jurisdictions, and in lots of different context. While the basics of the FHIR specification are relatively straight-forward (see the Overviews: General, Developers, Clinical, and Architects), it can still be difficult to know where to start when implementing a solution based on FHIR.

This page provides some guidance to help get new implementers started on their path to successful implementation. Beyond reading the overviews (previous paragraph), where should an implementer start? Generally, an implementer needs to resolve:

* How will information be exchanged? (see Foundation Module)

* How are terminologies being used? (see Terminology Module)

* How will the information be secured? (see Security and Privacy Module)

* What information is going to be exchanged?

The remaining sections provide guidance on specific areas (Foundation, Implementer Support, Security and Privacy, Conformance, Terminology, Linked Data, Administration, Clinical, Diagnostics, Medications, Workflow, Financial and Clinical Reasoning).

1.9.1 Modules

In order to help implementers find their way around the specification and answer these questions, it is organised into a set of "modules". Each module represents a different functional area of the specification, and contains:

* Scope and Index:A description of the content covered by the module, and an index of the important content

* Use cases: guidance for common uses of the module, and how to approach them. This is a key resource for implementers familiarizing themselves with the FHIR specification

* Security / Privacy: information

* Roadmap: Where the content covered by the module is in terms of overall progress (see also, for general information: FHIR Timelines

Broadly, the modules are organized into 3 groups:

* Infrastructure (bottom rung, and bottom row of boxes)

* Content (middle rung, and top row of boxes)

* Reasoning (top rung)

Level 1 Basic framework on which the specification is built

Foundation

Base Documentation, XML, JSON, REST API + Search, Data Types, Extensions

Level 2 Supporting Implementation, and binding to external specifications

Implementer Support

Downloads, Common Use Cases, Testing

Security & Privacy

Security, Consent Provenance AuditEvent

Conformance

StructureDefinition, CapabilityStatement, ImplementationGuide, Profiling

Terminology

CodeSystem, ValueSet, ConceptMap, Terminology Svc

Linked Data

RDF

Level 3 Linking to real world concepts in the healthcare system

Administration

Patient, Practitioner, Device, Organization, Location, Healthcare Service

Level 4 Record-keeping and Data Exchange for the healthcare process

Clinical

Allergy, Problem, CarePlan, DetectedIssue, RiskAssessment, etc.

Diagnostics

Observation, Report, Specimen, ImagingStudy,Genomics,etc

Medications

Order, Dispense, Administration, Statement, Immunization, etc.

Workflow

Task, Appointment, Schedule, Referral, PlanDefinition, etc.

Financial

Claim, Account, Coverage, Claim, EligibilityRequest, ExplanationOfBenefit, etc.

Level 5 Providing the ability to reason about the healthcare process

Clinical Reasoning

Library, ServiceDefinition & GuidanceResponse, Measure/MeasureReport, etc

Dependencies between the modules are mainly downwards, with some horizontal dependencies. Implementers should choose the content modules to engage with based on their requirements, and should only engage with the reasoning module if they need to do clinical decision support, and/or Quality Measures.

In addition to the use case based assistance in the modules, these additional documentation pages may be useful:

* Common Use Cases: Personal Health Record, Document Sharing (XDS) and Decision Support

* Resource Guide: Further information about the resources and the relationship between them

Finally, one important place to look is the registry of implementation guides , to see whether similar (or identical) requirements have been met.
