# Oracle-FHIR — R4 REST API — part 2 of 3 (r4-rest-api-v32/api-documentreference.html – r4-rest-api-v32/op-nutritionorder-id-get.html)

Source: Oracle Health Millennium FHIR R4 REST API Guide v32, Bulk Data Access Guide v10 and API guides (oracle-fhir-docs.zip). Text-only edition for AI ingestion (NotebookLM); pages follow the source order (its table of contents when one exists).

## DocumentReference

File: r4-rest-api-v32/api-documentreference.html

### Description

DocumentReference

This topic describes information for the DocumentReference resource.

Overview

The DocumentReference resource is used to reference a clinical document for a patient within the health system. This resource supports reading Continuity of Care Documents (CCDs), returning a list of clinical documents, and a reference to retrieve a document as a PDF. When retrieving document links and metadata, this resource refers to the Binary resource for downloading the complete document.

Additionally, this resource supports writing and updating documents. For fields supported on write or update operations, see the appropriate tasks for this resource.

This resource supports the US Core DocumentReference Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site. The field is present only for confidential resources.

Note:

meta.security

The following fields are returned if valued for clinical documents:

DocumentReference ID

Status

Document status

Document type

Document category

Subject (Patient)

Created date

Author

Reference (Practitioner)

Authenticator/verifying provider

Document attachment

Attachment ContentType

Created date and time

Title

URL (fully qualified link to the document)

Document dformat

Patient encounter

Reference (Encounter)

Document period

Custodian

Related

Terminology Bindings

DocumentReference.status

Description: The status of the document reference.

Details: DocumentReference status

System: http://hl7.org/fhir/document-reference-status

DocumentReference.docStatus

Description: The status of the underlying document.

Details: DocumentReference docStatus

System: http://hl7.org/fhir/r4/codesystem-composition-status.html

DocumentReference.type

Description: Specifies the particular type of document referenced.

Details: US Core DocumentReference Type

System: http://loinc.org

Details: US Core DocumentReference Type

System: http://terminology.hl7.org/CodeSystem/v3-NullFlavor (when type doesn't have a LOINC code)

Details: For more information, see Code Set 72 Clinical Event Codes under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/72

DocumentReference.category

Description: A categorization for the type of document referenced.

Details: US Core DocumentReference Category

System: http://hl7.org/fhir/us/core/CodeSystem/us-core-documentreference-category

Details: US Core DiagnosticReport Category

System: http://loinc.org

DocumentReference.meta.security

Description: These tags connect specific resources to the overall security policy and infrastructure.

Details: ValueSet

System: http://terminology.hl7.org/CodeSystem/v3-ActCode

DocumentReference

The operations from the DocumentReference category.

Create a document reference

Method: post Path: /DocumentReference

Get a document reference by ID

Method: get Path: /DocumentReference/{ID}

Get a list of document references

Method: get Path: /DocumentReference

Get a list of document references with $docref

Method: get Path: /DocumentReference/$docref

Update a document reference

Method: put Path: /DocumentReference/{ID}

# Create a document reference

File: r4-rest-api-v32/op-documentreference-post.html

Creates new documents.

Note:

* Only the body fields mentioned below are supported. Unsupported fields are ignored.

* All provided dates must have a time component.

* The following MIME types are supported:

* application/pdf

* text/plain

* text/richtext

* text/rtf

* text/html

* application/xml

* application/xhtml+xml

* See the content.attachment.contentType body field below for further details.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

### Request

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

The body of the create operation.

Root Schema : DocumentReferenceCreate

Type:

object

A summary representation of the create (POST) operation for a document reference.

Show Source

authenticator: object

authenticator

Which person authenticates that this document is valid. If set, must be a practitioner reference with a valid Millennium ID. Only supported with system access. Cannot be populated for provider access.

Note:

Example:

```
{
  "authenticator": {
    "reference": "Practitioner/3332064"
  }
}
```

author(required): object

author

Identifies who is responsible for adding the information to the document. Must contain only practitioner references with valid Millennium IDs. Optional for system access. For provider access, only a single author can be provided, and it must be the authorized provider.

Note:

Example:

```
{
  "author": [
    {
      "reference": "Practitioner/3332064"
    }
  ]
}
```

content(required): array

content

The document and format referenced. Must contain only one entry.

Note:

Example:

```
{
   "content": [
     {
       "attachment": {
         "contentType": "text/xml;charset=utf-8",
         "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
         "title": "Height Weight Allergy Rule",
         "creation": "2020-07-29T21:02:04.000Z"
       }
     }
   ]
}
```

context(required): array

context

The clinical context in which the document was prepared.

Example:

```
{
  "encounter": [
     {
```

```
      "reference": "Encounter/97987761"
    }
   ],
  "period": {
    "start": "2020-01-01T00:00:00.000Z",
    "end": "2020-01-01T01:00:00.000Z"
  }
}
```

docStatus(required): string

The status of the underlying document. Only is supported for provider access. and are supported for system access.

Note:

final

final

amended

Example:

```
{
  "docStatus": "final"
}
```

* resourceType(required): string Allowed Values: [ "DocumentReference" ] The type of the FHIR resource.

status(required): string

The status of this document reference. Only is supported.

Note:

current

Example:

```
{
  "status": "current"
}
```

subject(required): object

subject

Who the document is about. Only patient references are supported.

Note:

Example:

```
{
  "subject": {
    "reference": "Patient/12457977"
  }
}
```

type(required): object

type

Specifies the particular type of document referenced.

Note:

* The type must include a LOINC or a proprietary coding but not both together.

* Multiple LOINC codings or a single proprietary coding can be provided.

* When providing a proprietary code system, use the following format where the code set is Millennium Code Set 72: https://fhir.cerner.com/<your EHR source id>/codeSet/<code set>.

* Example: https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72.

Example:

```
{
  "type": {
    "coding": [
      {
        'system': 'https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72',
        'code': '2820507',
        'display': 'Admission Note Physician',
        'userSelected': true
      }
    ],
    'text': 'Admission Note Physician'
  }
}
```

```
{
    "description":"A summary representation of the create (POST) operation for a document reference.",
    "type":"object",
    "required":[
        "resourceType",
        "status",
        "docStatus",
```

```
    "type",
    "subject",
    "author",
    "content",
    "content.attachment",
    "content.attachment.contentType",

                                "type":"string"
                            }
                        }
                    },
                    "context.period":{
                        "description":"The time period over which the service that is described by the document was
    provided.<br>\n\n<b>Note:</b> The period.end field is required; the period.start field is optional. All dates
    require a time component.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"period\": {\n    \"start\":
    \"2020-01-01T00:00:00.000Z\",\n    \"end\": \"2020-01-01T01:00:00.000Z\"\n  }\n}</code></pre>\n",
                        "type":"object",
                        "properties":{
                            "start":{
                                "type":"string"
                            },
                            "end":{
                                "type":"string"
                            }
                        }
                    }
                }
            }
        }
    }
}
```

Nested Schema : authenticator

Type:

object

Which person authenticates that this document is valid. If set, must be a practitioner reference with a valid Millennium ID. Only supported with system access. Cannot be populated for provider access.

Note:

Example:

```
{
  "authenticator": {
    "reference": "Practitioner/3332064"
  }
}
```

Show Source

* reference: string

```
{
    "description":"Which person authenticates that this document is valid.<br>\n\n<b>Note:</b> If set, must be a
    practitioner reference with a valid Millennium ID. Only supported with system access. Cannot be populated for
    provider access.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"authenticator\": {\n    \"reference\":
    \"Practitioner/3332064\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
```

```
        }
    }
}
```

Nested Schema : author

Type:

object

Identifies who is responsible for adding the information to the document. Must contain only practitioner references with valid Millennium IDs. Optional for system access. For provider access, only a single author can be provided, and it must be the authorized provider.

Note:

Example:

```
{
  "author": [
    {
      "reference": "Practitioner/3332064"
    }
  ]
}
```

Show Source

* reference: string

```
{
    "description":"Identifies who is responsible for adding the information to the document.<br>\n\n<b>Note:</b> Must
    contain only practitioner references with valid Millennium IDs. Optional for system access. For provider access,
    only a single author can be provided, and it must be the authorized
    provider.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"author\": [\n    {\n      \"reference\":
    \"Practitioner/3332064\"\n    }\n  ]\n}</code></pre>\n",

    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : content

Type:

array

The document and format referenced. Must contain only one entry.

Note:

Example:

```
{
   "content": [
     {
       "attachment": {
         "contentType": "text/xml;charset=utf-8",
         "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
         "title": "Height Weight Allergy Rule",
         "creation": "2020-07-29T21:02:04.000Z"
       }
     }
   ]
}
```

        }
    }
}
```

Nested Schema : context

Type:

array

The clinical context in which the document was prepared.

Example:

```
{
  "encounter": [
     {
       "reference": "Encounter/97987761"
```

```
    }
   ],
  "period": {
     "start": "2020-01-01T00:00:00.000Z",
     "end": "2020-01-01T01:00:00.000Z"
  }
}
```

    }
}
```

Nested Schema : subject

Type:

object

Who the document is about. Only patient references are supported.

Note:

Example:

```
{
  "subject": {
    "reference": "Patient/12457977"
  }
}
```

Show Source

* reference: string

```
{
    "description":"Who the document is about.<br>\n\n<b>Note:</b> Only patient references are
    supported.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"subject\": {\n    \"reference\": \"Patient/12457977\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : type

Type:

object

Specifies the particular type of document referenced.

Note:

* The type must include a LOINC or a proprietary coding but not both together.

* Multiple LOINC codings or a single proprietary coding can be provided.

* When providing a proprietary code system, use the following format where the code set is Millennium Code Set 72: https://fhir.cerner.com/<your EHR source id>/codeSet/<code set>.

* Example: https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72.

Example:

```
{
  "type": {
    "coding": [
      {
        'system': 'https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72',
        'code': '2820507',
        'display': 'Admission Note Physician',
        'userSelected': true
      }
    ],
    'text': 'Admission Note Physician'
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"Specifies the particular type of document referenced.<br>\n\n<b>Note:</b> \n<ul>\n  <li>The type must

                    }
                }
            }
        }
    }
}
```

Nested Schema : items

Type:

object

Show Source

content.attachment: object

content.attachment

The document or URL of the document with critical metadata to prove that the content has integrity. Data and content type must be provided.

Note:

Example:

```
{
  "attachment": {
        "contentType": "application/xml;charset=utf-8",
        "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
        "title": "Height Weight Allergy Rule",
        "creation": "2020-07-29T21:02:04.000Z"
      }
}
```

content.attachment.contentType: string

Identifies the type of the data in the attachment and allows a method to be chosen to interpret or render the data. Includes MIME type parameters such as charset where appropriate.

Note:

* Must be provided.
* Content type must include a supported MIME type and character set.
* The following values are supported:
* application/pdf
* text/plain;charset=utf-8
* text/richtext;charset=utf-8
* text/rtf;charset=utf-8
* text/html;charset=utf-8
* application/xml;charset=utf-8
* application/xhtml+xml;charset=utf-8

Example:

```
{
  "contentType": "application/xml;charset=utf-8"
}
```

content.attachment.creation: string

The date that the attachment was first created. A time component must be provided with the date.

Note:

Example:

```
{
  "creation": "2020-07-29T21:02:04.000Z"
}
```

content.attachment.data: string

The actual data of the attachment. A sequence of bytes that are base64 encoded. See the page for more information.

Note:

Common Issues

Example:

```
{
  "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4="
}
```

content.attachment.title: object

content.attachment.title

A label or set of text to display in place of the data.

Example:

```
{
  "title": "Height Weight Allergy Rule",
}
```

```
{
    "type":"object",
    "properties":{
        "content.attachment":{
            "description":"The document or URL of the document with critical metadata to prove that the content has
    integrity.<br>\n\n<b>Note:</b> Data and content type must be provided.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n
    \"attachment\": {\n        \"contentType\": \"application/xml;charset=utf-8\",\n        \"data\":

    }
}
```

Nested Schema : content.attachment

Type:

object

The document or URL of the document with critical metadata to prove that the content has integrity. Data and content type must be provided.

Note:

Example:

```
{
  "attachment": {
        "contentType": "application/xml;charset=utf-8",
        "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
        "title": "Height Weight Allergy Rule",
        "creation": "2020-07-29T21:02:04.000Z"
      }
}
```

Show Source

* contentType(required): string Identifies the type of the data in the attachment and allows a method to be chosen to interpret or render the data. Includes MIME type parameters such as charset where appropriate.

* creation: string The date that the attachment was first created.

* data(required): string The actual data of the attachment. A sequence of bytes that are base64 encoded.

* title: string A label or set of text to display in place of the data.

```
{
    "description":"The document or URL of the document with critical metadata to prove that the content has
    integrity.<br>\n\n<b>Note:</b> Data and content type must be provided.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n

    "required":[
        "contentType",
        "data"
    ],
    "properties":{
        "contentType":{
            "type":"string",
            "description":"Identifies the type of the data in the attachment and allows a method to be chosen to
    interpret or render the data. Includes MIME type parameters such as charset where appropriate."
        },
        "data":{
            "type":"string",
            "description":"The actual data of the attachment. A sequence of bytes that are base64 encoded."
        },
        "title":{
            "type":"string",
            "description":"A label or set of text to display in place of the data."
        },
        "creation":{
            "type":"string",
            "description":"The date that the attachment was first created."
        }
    }
}
```

Nested Schema : content.attachment.title

Type:

object

A label or set of text to display in place of the data.

Example:

```
{
  "title": "Height Weight Allergy Rule",
}
```

Show Source

* contentType(required): string Identifies the type of the data in the attachment and allows a method to be chosen to interpret or render the data. Includes MIME type parameters such as charset where appropriate.

* creation: string The date that the attachment was first created.

* data(required): string The actual data of the attachment. A sequence of bytes that are base64 encoded.

* title: string A label or set of text to display in place of the data.

```
{
    "description":"A label or set of text to display in place of the data.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"title\": \"Height Weight Allergy Rule\",\n}</code></pre>\n",
    "type":"object",
    "required":[
        "contentType",
        "data"
    ],
    "properties":{
        "contentType":{
            "type":"string",
            "description":"Identifies the type of the data in the attachment and allows a method to be chosen to
    interpret or render the data. Includes MIME type parameters such as charset where appropriate."
        },
        "data":{
            "type":"string",
            "description":"The actual data of the attachment. A sequence of bytes that are base64 encoded."
        },
        "title":{
            "type":"string",
            "description":"A label or set of text to display in place of the data."
        },
        "creation":{
            "type":"string",
            "description":"The date that the attachment was first created."
        }
    }
}
```

Nested Schema : items

Type:

object

Show Source

context.encounter: object

context.encounter

Describes the clinical encounter that the document content is associated with. Only a single encounter reference is supported.

Note:

Example:

```
{
  "encounter": [
    {
      "reference": "Encounter/97987761"
    }
  ]
}
```

context.period: object

context.period

The time period over which the service that is described by the document was provided. The period.end field is required; the period.start field is optional. All dates require a time component.

Note:

Example:

```
{
  "period": {
    "start": "2020-01-01T00:00:00.000Z",
    "end": "2020-01-01T01:00:00.000Z"
  }
}
```

```
{
    "type":"object",
    "properties":{
        "context.encounter":{
            "description":"Describes the clinical encounter that the document content is associated
    with.<br>\n\n<b>Note:</b> Only a single encounter reference is supported.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n
    \"encounter\": [\n    {\n      \"reference\": \"Encounter/97987761\"\n    }\n  ]\n}</code></pre>\n",
            "type":"object",
            "properties":{
                "reference":{
                    "type":"string"
                }
            }
        },
        "context.period":{
            "description":"The time period over which the service that is described by the document was
    provided.<br>\n\n<b>Note:</b> The period.end field is required; the period.start field is optional. All dates

```

Headers

* Etag: string For Update or Patch versioning controls. Related to If-Match. When a resource performs an operation that creates or updates a record, an Etag value is returned as a header. This same value should be included in request headers as an If-Match for any subsequent update to that record.

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# Get a document reference by ID

File: r4-rest-api-v32/op-documentreference-id-get.html

Retrieves an individual document by the associated ID.

Note:

* The read operation is supported for clinical-note, cardiology, radiology, microbiology, and pathology charted documents and clinical-note staged documents.

* Contents of the documents are found in the attachment URL. See the Binary resource information to determine what authorization scopes are required and how to set the Accept header when downloading document contents.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Note:

* Contents of the documents are found in the attachment URL.

* See the Binary resource information to determine what authorization scopes are required and how to set the Accept header when downloading document contents.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/DocumentReference/198381924
```

Example Response:

Headers

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

### x-confidential-response Response

Note: The confidentiality feature is supported for physdoc and radiology documents.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/DocumentReference/198381924
```

Example Response:

```
{
    "resourceType": 'DocumentReference',
    "id": '198381924',
    "meta": {
      "versionId": '1',
      "lastUpdated": '2022-07-07T09:43:56.000Z',
      "security": [
        {
          "system": "http://terminology.hl7.org/CodeSystem/v3-ActCode",
          "code": "PRS",
          "display": "patient requested information sensitivity",
          "userSelected": false
        },
```

```
    {
      "system": "http://terminology.hl7.org/CodeSystem/v3-ActCode",

### x-with-nil-status-request Response

Note:

* Contents of the documents are found in the attachment URL.

* See the Binary resource information to determine what authorization scopes are required and how to set the Accept header when downloading document contents.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/DocumentReference/206098371
```

Example Response:

```
{
    "resourceType": 'OperationOutcome',
    "issue": [
      {
        "severity": 'error',
        "code": 'not-found',
        "details": {
          "text": 'Resource not found'
        }
      }
    ]
  }
```

Headers

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# Get a list of document references

File: r4-rest-api-v32/op-documentreference-get.html

Retrieves a list of documents that meet supplied query parameters.

Note:

* The search operation is supported for clinical-note, cardiology, radiology, microbiology, and pathology charted documents and clinical-note staged documents.

* Contents of the documents are found in the attachment URL. See the Binary resource information to determine what authorization scopes are required and how to set the Accept header when downloading document contents.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Query Parameters

* _count: string The maximum number of results to return. Defaults to 10 and a maximum of 100 documents can be returned.

_id: string

The logical resource ID. Example:

* This parameter is required if the patient parameter is not used.

* Must not be provided with any other parameters except _revinclude parameter as noted below.

12345

_lastUpdated: string

The date range in which the document was last updated. Example: or

* This parameter only qualifies clinically significant updates. For example, changes to the value or code, and other significant fields. Minor updates, such as nonclinically relevant note updates, do not qualify.

* This parameter may be provided up to two times, and must use the eq, ge, gt, le, or lt prefixes.

* When a value is provided without a prefix, an implied eq prefix is used.

* When provided twice, the lower value must have a ge or gt prefix and the higher value must have an le or lt prefix.

* The _lastUpdated parameter may not be provided at the same time as either of the date or period parameters. You may only use one of the three at a time.

_lastUpdated=gt2014-09-24

_lastUpdated=gt2014-09-24T12:00:00.000Z

_revinclude: string

The Provenance resource entries to be returned as part of the bundle. Example:

* May be provided once with the Provenance:target value. Example: _revinclude=Provenance:target.

* May be provided with the _id or patient parameter. Example: _id=214938095&_revinclude=Provenance:target.

* When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding with the authorization type, such as user/Provenance.read, patient/Provenance.read, or system/Provenance.read.

_revinclude=Provenance:target

category: string

The categorization of the document. Example:

`http://loinc.org|11488-4`

date: string

When this document reference was created. Example:

* For a single date occurrence:

* May be provided with a prefix to imply a date range or without a prefix to search for documents last updated at a specific date and time.

* The time component is optional.

* For two date occurences:

* Must be provided with le or lt and ge or gt prefixes to search for documents within a specific range.

* The time component is required for both parameters.

* The date parameter may not be provided at the same time as either of the period or _lastUpdated parameters. You may only use one of the three at a time.

date=ge2020-01-01T08:00:00.000Z&date=le2020-01-31T17:00:00.000Z

encounter: string

The encounters in which the document was created. Example:

* Patient-level documents are filtered out from responses when the encounter ID is blank.

* May be provided with a single reference or a comma-separated list of references. Example: encounter=1234 or encounter=1234,5678.

12345

* patient: string The specific patient to return documents for. This parameter is required if the _id parameter is not used. Example: 12345

period: string

The time of service that is being documented. Example:

* Must be provided twice, once with the ge prefix, and once with the lt prefix.

* Date precision must be consistent.

* The period parameter may not be provided at the same time as either of the date or _lastUpdated parameters. You may only use one of the three at a time.

period=ge2017-01-01&period=lt2017-01-05

type: string

The type of document. May be a list separated by commas. Example:

`http://loinc.org|11488-4`

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Note:

* Contents of the documents are found in the attachment URL.

* See the Binary resource information to determine what authorization scopes are required and how to set the Accept header when downloading document contents.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/DocumentReference?patient=12769853
```

Example Response:

# Get a list of document references with $docref

File: r4-rest-api-v32/op-documentreference-docref-get.html

Argonaut operation for querying document references for the supplied parameters.

Terminology Bindings

* DocumentReference.type

* Description: The precise type of clinical document

* Details: LOINC

* System: http://loinc.org

* DocumentReference.content.format

* Description: The document format codes.

* Details: DocumentReference Format Code Set

* System: urn:oid:1.3.6.1.4.1.19376.1.2.3

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

**Request**

Query Parameters

end: string

The end of the date range until which document reference records should be included. Example:

* Must be valid dateTime values with a time component.

* Must have eq prefixes or nothing.

* If start is not provided, then all previous records up to the end date are included.

* If end is not provided, then all records between the start date and the current date are included.

end=2016-09-24T12:00:00.000Z

* patient(required): string A reference to the patient whose document references are required. Example: patient=12345

start: string

The start of the date range from which document reference records should be included. Example:

* Must be valid dateTime values with a time component.

* Must have eq prefixes or nothing.

* If start is not provided, then all previous records up to the end date are included.

* If end is not provided, then all records between the start date and the current date are included.

start=2014-09-24T12:00:00.000Z

type(required): string

The document reference type. Example:

* Must include both a system and a code. Example: &type=http://loinc.org|34133-9.

* May be a single system and code or a comma-separated list.

type=http://loinc.org|34133-9

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-
    0e701af7583d/DocumentReference/$docref?patient=13160351&type=http%3A%2F%2Floinc.org%7C34133-9
```

Example Response:

```
{
    'resourceType': 'Bundle',
    'id': '2cb9157f-0f05-4fe4-af14-95d5808a4070',

# Update a document reference

File: r4-rest-api-v32/op-documentreference-id-put.html

Updates documents.

Note:

* Only the body fields mentioned below are supported. Unsupported fields are ignored.

* All provided dates must have a time component.

* The following MIME types are supported:

* application/pdf

* text/plain

* text/richtext

* text/rtf

* text/html

* application/xml

* application/xhtml+xml

* See the content.attachment.contentType body field below for further details.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

### Request

Supported Media Types

* application/fhir+json

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* If-Match(required): string The current version of the DocumentReference resource.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

The body of the update operation.

Root Schema : DocumentReferenceUpdate

Type:

object

Show Source

authenticator: object

authenticator

Which person authenticates that this document is valid. If set, must be a practitioner reference with a valid Millennium ID. Only supported with system access. Cannot be populated for provider access.

Note:

Example:

```
{
  "authenticator": {
    "reference": "Practitioner/3332064"
  }
}
```

author(required): object

author

Identifies who is responsible for adding the information to the document. Must contain only practitioner references with valid Millennium IDs. Optional for system access. For provider access, only a single author can be provided, and it must be the authorized provider.

Note:

Example:

```
{
  "author": [
    {
      "reference": "Practitioner/3332064"
    }
  ]
}
```

content(required): object

content

The document and format referenced. Must contain only one entry.

Note:

Example:

```
{
   "content": [
     {
       "attachment": {
         "contentType": "application/xml;charset=utf-8",
         "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
         "title": "Height Weight Allergy Rule",
         "creation": "2020-07-29T21:02:04.000Z"
       }
     }
   ]
}
```

context(required): object

context

The clinical context in which the document was prepared.

Example:

```
{
  "encounter": [
     {
       "reference": "Encounter/97987761"
     }
   ],
  "period": {
    "start": "2020-01-01T00:00:00.000Z",
    "end": "2020-01-01T01:00:00.000Z"
  }
}
```

docStatus(required): string

The status of the underlying document. Allowed values for docStatus are , , and . If either status or docStatus are updated to , the document is treated as a document that was entered in error, regardless of the values of the other fields.

Note:

final

amended

entered-in-error

entered-in-error

Example:

```
{
  "docStatus": "amended"
}
```

* resourceType(required): string Allowed Values: [ "DocumentReference" ] The type of the FHIR resource.

status(required): string

The status of this document reference. Both and are supported. If either status or docStatus are updated to , the document is treated as a document that was entered in error, regardless of the values of the other fields.

Note:

current

entered-in-error

entered-in-error

Example:

```
{
  "status": "entered-in-error"
}
```

subject(required): object

subject

Who the document is about. The patient has to match the original document.

Note:

Example:

```
{
  "subject": {
    "reference": "Patient/12457977"
  }
}
```

type: object

type

Specifies the particular type of document referenced.

Note:

* The type must include a LOINC or a proprietary coding but not both together.

* Multiple LOINC codings or a single proprietary coding can be provided.

* When providing a proprietary code system, use the following format where the code set is Millennium Code Set 72: https://fhir.cerner.com/<your EHR source id>/codeSet/<code set>

* Example: https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72

Example:

```
{
  "type": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72",
        "code": "2820507",
        "display": "Admission Note-Physician",
        "userSelected": true
      }
    ]
  }
}
```

```
{
    "type":"object",
    "required":[

            }
        }
    }
}
```

Nested Schema : authenticator

Type:

object

Which person authenticates that this document is valid. If set, must be a practitioner reference with a valid Millennium ID. Only supported with system access. Cannot be populated for provider access.

Note:

Example:

```
{
  "authenticator": {
    "reference": "Practitioner/3332064"
  }
}
```

Show Source

* reference: string

```
{
    "description":"Which person authenticates that this document is valid.<br>\n\n<b>Note:</b> If set, must be a
    practitioner reference with a valid Millennium ID. Only supported with system access. Cannot be populated for
    provider access.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"authenticator\": {\n    \"reference\":
    \"Practitioner/3332064\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : author

Type:

object

Identifies who is responsible for adding the information to the document. Must contain only practitioner references with valid Millennium IDs. Optional for system access. For provider access, only a single author can be provided, and it must be the authorized provider.

Note:

Example:

```
{
  "author": [
    {
      "reference": "Practitioner/3332064"
    }
  ]
}
```

Show Source

* reference: string

```
{
    "description":"Identifies who is responsible for adding the information to the document.<br>\n\n<b>Note:</b> Must
    contain only practitioner references with valid Millennium IDs. Optional for system access. For provider access,
    only a single author can be provided, and it must be the authorized
    provider.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"author\": [\n    {\n      \"reference\":
    \"Practitioner/3332064\"\n    }\n  ]\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : content

Type:

object

The document and format referenced. Must contain only one entry.

Note:

Example:

```
{
   "content": [
     {
       "attachment": {
         "contentType": "application/xml;charset=utf-8",
         "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
         "title": "Height Weight Allergy Rule",
         "creation": "2020-07-29T21:02:04.000Z"
       }
     }
   ]
}
```

Show Source

content.attachment: object

content.attachment

The document or URL of the document with critical metadata to prove that the content has integrity.

Note:

* Data and content type must be provided.

* Content type must include a supported MIME type and character set.

* The following values are supported:

* application/pdf

* text/rtf;charset=utf-8

* text/html;charset=utf-8

* application/xml;charset=utf-8

* application/xhtml+xml;charset=utf-8

* A time component must be provided with the creation date. The new date must not be earlier than the previous content.attachment.creation date.

Example:

```
{
  "attachment": {
        "contentType": "application/xml;charset=utf-8",
        "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
        "title": "Height Weight Allergy Rule",
        "creation": "2020-07-29T21:02:04.000Z"
      }
}
```

```
{
    "description":"The document and format referenced.<br>\n\n<b>Note:</b> Must contain only one

            "properties":{
                "contentType":{
                    "type":"string",
                    "description":"Identifies the type of the data in the attachment and allows a method to be chosen to
     interpret or render the data. Includes MIME type parameters such as charset where appropriate."
                },
                "data":{
                    "type":"string",
                    "description":"The actual data of the attachment. A sequence of bytes that are base64 encoded."
                },
                "title":{
                    "type":"string",
                    "description":"A label or set of text to display in place of the data."
                },
                "creation":{
                    "type":"string",
                    "description":"The date that the attachment was first created."
                }
            }
        }
    }
}
```

Nested Schema : context

Type:

object

The clinical context in which the document was prepared.

Example:

```
{
  "encounter": [
```

```
    {
      "reference": "Encounter/97987761"
    }
   ],
  "period": {
    "start": "2020-01-01T00:00:00.000Z",
    "end": "2020-01-01T01:00:00.000Z"
  }
}
```

Show Source

context.encounter: object

context.encounter

Describes the clinical encounter that the document content is associated with. The encounter has to match the original document encounter.

Note:

Example:

```
{
  "encounter": [
    {
      "reference": "Encounter/97987761"
    }
  ]
}
```

context.period: object

context.period

The time period over which the service that is described by the document was provided. The period.end field is required; the period.start field is optional. All dates require a time component.

Note:

Example:

```
{
  "period": {
    "start": "2020-01-01T00:00:00.000Z",
    "end": "2020-01-01T01:00:00.000Z"
  }
}
```

```
{
    "description":"The clinical context in which the document was prepared.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"encounter\": [\n     {\n       \"reference\": \"Encounter/97987761\"\n     }\n   ],\n  \"period\": {\n

                },
                "end":{
                    "type":"string"
                }
            }
        }
    }
}
```

Nested Schema : subject

Type:

object

Who the document is about. The patient has to match the original document.

Note:

Example:

```
{
  "subject": {
    "reference": "Patient/12457977"
  }
}
```

Show Source

* reference: string

```
{
    "description":"Who the document is about.<br>\n\n<b>Note:</b> The patient has to match the original
    document.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"subject\": {\n    \"reference\": \"Patient/12457977\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : type

Type:

object

Specifies the particular type of document referenced.

Note:

* The type must include a LOINC or a proprietary coding but not both together.

* Multiple LOINC codings or a single proprietary coding can be provided.

* When providing a proprietary code system, use the following format where the code set is Millennium Code Set 72: https://fhir.cerner.com/<your EHR source id>/codeSet/<code set>

* Example: https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72

Example:

```
{
  "type": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72",
        "code": "2820507",
        "display": "Admission Note-Physician",
        "userSelected": true
      }
    ]
  }
}
```

Show Source

* coding: array coding

* text: string

```

            }
        }
    }
}
```

Nested Schema : content.attachment

Type:

object

The document or URL of the document with critical metadata to prove that the content has integrity.

Note:

* Data and content type must be provided.

* Content type must include a supported MIME type and character set.

* The following values are supported:

* application/pdf

* text/rtf;charset=utf-8

* text/html;charset=utf-8

* application/xml;charset=utf-8

* application/xhtml+xml;charset=utf-8

* A time component must be provided with the creation date. The new date must not be earlier than the previous content.attachment.creation date.

Example:

```
{
  "attachment": {
        "contentType": "application/xml;charset=utf-8",
        "data": "PGh0bWw+Cjx0aXRsZT4gVGVzdCBEb2N1bWVudCA8L3RpdGxlPgoKRG9jdW1lbnQgY29udGVudCEKCjwvaHRtbD4=",
        "title": "Height Weight Allergy Rule",
        "creation": "2020-07-29T21:02:04.000Z"
      }
}
```

Show Source

* contentType(required): string Identifies the type of the data in the attachment and allows a method to be chosen to interpret or render the data. Includes MIME type parameters such as charset where appropriate.

* creation: string The date that the attachment was first created.

* data(required): string The actual data of the attachment. A sequence of bytes that are base64 encoded.

* title: string A label or set of text to display in place of the data.

```

            "description":"The date that the attachment was first created."
        }
    }
}
```

Nested Schema : context.encounter

Type:

object

Describes the clinical encounter that the document content is associated with. The encounter has to match the original document encounter.

Note:

Example:

```
{
  "encounter": [
    {
      "reference": "Encounter/97987761"
    }
  ]
}
```

Show Source

* reference: string

```
{
    "description":"Describes the clinical encounter that the document content is associated with.<br>\n\n<b>Note:</b>
    The encounter has to match the original document encounter.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"encounter\":
     [\n    {\n      \"reference\": \"Encounter/97987761\"\n    }\n  ]\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : context.period

Type:

object

The time period over which the service that is described by the document was provided. The period.end field is required; the period.start field is optional. All dates require a time component.

Note:

Example:

```
{
  "period": {
    "start": "2020-01-01T00:00:00.000Z",
    "end": "2020-01-01T01:00:00.000Z"
  }
}
```

Show Source

* end: string

* start: string

```
{
    "description":"The time period over which the service that is described by the document was
    provided.<br>\n\n<b>Note:</b> The period.end field is required; the period.start field is optional.  All dates
    require a time component.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"period\": {\n    \"start\":
    \"2020-01-01T00:00:00.000Z\",\n    \"end\": \"2020-01-01T01:00:00.000Z\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "start":{
            "type":"string"
        },
        "end":{
            "type":"string"
        }
    }
}
```

Nested Schema : coding

Type:

array

Show Source

* Array of: object items

```
{
    "type":"array",
    "items":{
        "type":"object",
        "properties":{
            "system":{
                "type":"string"
            },
            "code":{
                "type":"string"
            }
        }
    }
```

```
}
```

Nested Schema : items

Type:

object

Show Source

* code: string

* system: string

```
{
    "type":"object",
    "properties":{
        "system":{
            "type":"string"
        },
        "code":{
            "type":"string"
        }
    }
}
```

```

Headers

* Etag: string For Update or Patch versioning controls. Related to If-Match. When a resource performs an operation that creates or updates a record, an Etag value is returned as a header. This same value should be included in request headers as an If-Match for any subsequent update to that record.

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# Encounter

File: r4-rest-api-v32/api-encounter.html

### Description

Encounter

This topic describes information for the Encounter resource.

Overview

The Encounter resource provides admissions or visits during which healthcare services were provided to a patient. An encounter has a class to distinguish between different healthcare settings such as inpatient, outpatient, emergency, and so on. A patient may have one medical record number with multiple encounter numbers per facility or organization. Substantial variance exists between organizations in the definition of an encounter and what events are aggregated together to constitute an encounter.

This resource supports the US Core Encounter Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0.

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site. The field is present only when a problem or diagnosis is marked as confidential.

Note:

meta.security

Fields

* Encounter ID

* Encounter identifier

* Status

* Class

* Type

* Service Type

* Priority

Subject

* Reference (Patient)

Participant:

* Type

Name

* Reference (Practitioner)

* Appointment

* Start/end time of the Encounter

* Reason for visit

* Incident

* Admitting diagnoses

* Administrative problem

Hospitalization:

* Admit source
* Diet preference
* Special courtesy
* Special arrangement

Discharge destination

* Reference (Location)
* Discharge disposition

Location:

* Name
* Location status
* Service provider
* Extensions (for more information, see the Extensions section of this topic)

Contained Location bindings

Location.type

Description: Indicates the type of function performed at the location.

Details: v3 Code System RoleCode

System: http://terminology.hl7.org/CodeSystem/v3-RoleCode

Terminology Bindings

Encounter.identifier.type

Description: The type used to determine which identifier to use for a specific purpose.

Details: Identifier Type Codes

System: http://hl7.org/fhir/identifier-type

Details: v2 Identifier Type

System: http://terminology.hl7.org/CodeSystem/v2-0203

Details: For more information, see Code Set 319 Encounter Alias Type under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/319

Encounter.type

Description: The type of encounter.

Details: For more information, see Code Set 71 Visit Type under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/71

Details: v2 Patient Class

System: http://terminology.hl7.org/CodeSystem/v2-0004

Details: SNOMED CT

System: http://snomed.info/sct

Encounter.serviceType

Description: Broad categorization of the service that is to be provided.

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 34 Hospital Service under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/34

Encounter.priority

Description: Indicates the urgency of the encounter.

Details: Encounter Priority

System: http://hl7.org/fhir/encounter-priority

Details: For more information, see Code Set 3 Encounter Admission Type under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/3

Encounter.participant.type

Description: Role of participant in encounter.

Details: ParticipantType

System: http://terminology.hl7.org/CodeSystem/v3-ParticipationType

Details: For more information, see Code Set 333 Encounter/Personnel Relationship under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/333

Encounter.hospitalization.admitSource

Description: From where patient was admitted.

Details: AdmitSource

System: http://hl7.org/fhir/admit-source

Details: For more information, see Code Set 2 Admission Source under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/2

Encounter.hospitalization.dietPreference

Description: Medical, cultural or ethical food preferences to help with catering requirements.

Details: Diet

System: http://terminology.hl7.org/CodeSystem/diet

Details: For more information, see Code Set 18 Diet under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/18

Encounter.hospitalization.specialCourtesy

Description: Special courtesies.

Details: v3 Code System EncounterSpecialCourtesy

System: http://terminology.hl7.org/CodeSystem/v3-EncounterSpecialCourtesy

Details: For more information, see Code Set 67 VIP under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/67

Details: For more information, see Code Set 16 Courtesy under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/16

Encounter.hospitalization.specialArrangement

Description: Special arrangements.

Details: SpecialArrangements

System: http://hl7.org/fhir/encounter-special-arrangements

Encounter.hospitalization.dischargeDisposition

Description: Discharge Disposition.

Details: DischargeDisposition

System: http://hl7.org/fhir/discharge-disposition

Details: For more information, see Code Set 19 Discharge Disposition under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/19

Encounter.meta.security

Description: Security labels applied to this resource.

Encounters created with meta.security set with code 'UNCERTREL' will be returned with an external encounter type.

Note:

Details: Observation Values

System: http://terminology.hl7.org/CodeSystem/v3-ObservationValue

Encounter.extension[x].extension[x].valueCodeableConcept

Description: The value of the client defined custom attribute. This binding is used for the custom-attribute-value extension nested under custom-attribute extensions.

Note:

* The terminology binding only applies when the custom-attribute-value extension is of type CodeableConcept.

* The value of the custom attribute is not limited to a single Code Set or nomenclature.

Details: For more information, see the Proprietary Codes section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/<code set>

Details: For more information, see Nomenclature under the List of Systems section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/nomenclature

Encounter.extension[x].valueMoney.currency (for more information, see the Extensions section of this topic)

Description: Currency codes from ISO 4217. This binding is used in estimated-financial-responsibility-amount extensions.

Details: Currencies

System: urn:iso:std:iso:4217

Encounter.extension[x].valueCodeableConcept (for more information, see the Extensions section of this topic)

Description: The reason no estimated amount is collected for the encounter. This binding is used in estimated-financial-responsibility-not-collected-reason extensions.

Details: For more information, see the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/4660008

Encounter.extension[x].valueCodeableConcept (for more information, see the Extensions section of this topic)

Description: Identifies whether an encounter is connected to military service. This binding is used in military-service-connected-indicator extensions.

Details: For more information, see the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/4003348

Encounter.extension[x].valueCodeableConcept (for more information, see the Extensions section of this topic)

Description: The payment collection status. This binding is used in payment-collection-status extensions.

Details: For more information, see the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR source id>/codeSet/4003489

Extensions

All URLs for custom extensions are defined as https://fhir-ehr.cerner.com/r4/StructureDefinition/{id}

Table - Extensions

ID | Value[x} Type | Description
client-organization | Reference | The financially responsible organization.
custom-attribute | None (contains nested extensions) | A client defined custom attribute for the resource. Attribute values can be of type integer, string, CodeableConcept, or dateTime.
estimated-financial-responsibility-amount | Money | The estimated amount to be collected for the encounter.
estimated-financial-responsibility-not-collected-reason | CodeableConcept | The reason no estimated amount is collected for the encounter.
military-service-connected-indicator | CodeableConcept | Identifies whether an encounter is connected to military service.
payment-collection-status | CodeableConcept | The status of the payment collection for the encounter.

Encounter

The operations from the Encounter category.

Create an encounter

Method: post Path: /Encounter

Get a list of encounters

Method: get Path: /Encounter

Get an encounter by ID

Method: get Path: /Encounter/{ID}

Patch an encounter by ID

Method: patch Path: /Encounter/{ID}

# Create an encounter

File: r4-rest-api-v32/op-encounter-post.html

Creates an individual encounter.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

### Request

Supported Media Types

* application/json+fhir

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

The body of the create operation

Root Schema : EncounterCreateBody

Type:

object

Show Source

* class: string The classification of the encounter. Direct writing of class is not supported. This field is inferred on a write. Example: inpatient

extension:

A client-defined custom attribute for the encounter.

Note:

* The custom-attribute ID field cannot be set.

* custom-attribute-name and custom-attribute-value are both required.

* ID and valueString for custom-attribute-name are required.

* custom-attribute-value can be of type string, integer, dateTime, or CodeableConcept.

* CodeableConcept can have the following systems:

* https://fhir.cerner.com/{EHR source id}/nomenclature

* https://fhir.cerner.com/{EHR source id}/codeSet/{code set}

Example:

[ { "extension": [ { "id": "ENCNTR:2822522", "valueString": "ICD-9 Code", "url": "custom-attribute-name" }, { "valueString": "test string", "url": "custom-attribute-value" } ], "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/custom-attribute" } ]

* hospitalization: object hospitalization The details about the admission to a healthcare service. Only the admitSource and dischargeDisposition fields are supported on a write.

* identifier: object identifier The identifiers by which this encounter is known.

* location(required): The location where the encounter takes place. Only one location reference is permitted. Cannot be provided when serviceProvider is present. Example: [ { "location": { "reference": "Location/21250409" } } ]

* meta: The security labels applied to this resource. Encounters created with meta.security that are set with a code value of UNCERTREL are returned with an external encounter type. Example: [ { "security": [ { "system": "http://terminology.hl7.org/CodeSystem/v3-ObservationValue", "code": "UNCERTREL" } ] } ]

* participant: object participant The list of people responsible for providing the service.

* period: The start and end times of the encounter. A date with the time must be provided. Example: { "start": "2020-03-02T01:13:00Z", "end": "2020-03-05T00:00:00Z" }

* priority: Identification of the condition, problem, or diagnosis. Example: [ { "coding": [ { "system": "http://terminology.hl7.org/CodeSystem/v3-ActPriority", "code": "O" } ] } ]

* reasonCode: The reason that the encounter is taking place. ICD-10 and SNOMED codes with text fields are supported. Example: [ { "coding": [ { "system": "http://snomed.info/sct", "code": "208388003", "display": "Fracture At Wrist And/Or Hand Level", "userSelected": true } ] }, { "text": "Neck pain" } ]

* resourceType(required): string The FHIR resource type. resourceType must be Encounter. Example: Encounter

* serviceProvider(required): The organization (facility) responsible for this encounter. Cannot be provided when location is present. Example: { "reference": "Organization/619848" }

* status(required): string The status of the encounter. Currently, the cancelled or entered-in-error statuses are not supported. Example: in-progress

* subject: The patient present at the encounter. Example: { "reference": "Patient/4342011" }

* type: The specific type of encounter. Example: [ { "coding": [ { "system": "http://terminology.hl7.org/CodeSystem/v2-0004", "code": "O" } ] } ]

```
{

        }
    }
}
```

Nested Schema : hospitalization

Type:

object

The details about the admission to a healthcare service. Only the admitSource and dischargeDisposition fields are supported on a write.

Show Source

* admitSource: Where the patient was admitted from.

* dischargeDisposition: The category or type of location after discharge.

```
{
    "description":"The details about the admission to a healthcare service. Only the admitSource and
    dischargeDisposition fields are supported on a write.",
    "properties":{
        "admitSource":{
            "description":"Where the patient was admitted from."
        },
        "dischargeDisposition":{
            "description":"The category or type of location after discharge."
        }
    },
    "example":"{\n  \"admitSource\": {\n    \"coding\": [\n      {\n        \"system\":
    \"http://terminology.hl7.org/CodeSystem/admit-source\",\n        \"code\": \"born\"\n      }\n    ]\n  },\n
    \"dischargeDisposition\": {\n    \"coding\": [\n      {\n        \"system\":
    \"http://terminology.hl7.org/CodeSystem/discharge-disposition\",\n        \"code\": \"other-hcf\"\n      }\n    ]\n
      }\n}\n"
}
```

Example:

```
{
  "admitSource": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/admit-source",
        "code": "born"
      }
    ]
  },
  "dischargeDisposition": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/discharge-disposition",
        "code": "other-hcf"
      }
    ]
  }
}
```

Nested Schema : identifier

Type:

object

The identifiers by which this encounter is known.

Show Source

* period: The time period during which the identifier is valid for use. Example: { "start": "2017-01-17T20:39:40.000Z" }

* system(required): string The namespace of the identifier. Example: urn:oid:3.3.3.3.3.3

* type(required): object type The type for the identifier that can be used to determine which identifier is appropriate for a specific purpose.

* value(required): string The unique value of the identifier Example: 2009

```
{
    "required":[
        "type",
        "system",
        "value"
    ],
    "description":"The identifiers by which this encounter is known.",
    "properties":{
        "type":{
            "type":"object",
            "description":"The type for the identifier that can be used to determine which identifier is appropriate for
     a specific purpose.",
            "example":"{\n  \"type\": {\n    \"coding\": [\n      {\n        \"system\":
    \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/319\",\n        \"code\": \"1077\",\n
    \"display\": \"FIN NBR\"\n      }\n    ]\n  }\n}\n"
        },
        "system":{
            "type":"string",
            "description":"The namespace of the identifier.",
            "example":"urn:oid:3.3.3.3.3.3"
        },
        "value":{
            "type":"string",
            "description":"The unique value of the identifier",
            "example":2009
        },
        "period":{
            "description":"The time <a href=\"https://hl7.org/fhir/r4/datatypes.html#Period\">period</a> during which
    the identifier is valid for use.\n",
            "example":"{\n    \"start\": \"2017-01-17T20:39:40.000Z\"\n}\n"
        }
    },
    "example":"[\n   {\n     \"use\": \"usual\",\n     \"type\": {\n       \"coding\": [\n         {\n
    \"system\": \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/319\",\n           \"code\":

    \"urn:oid:3.3.3.3.3.3\",\n     \"value\": \"2009\",\n     \"period\": {\n       \"start\":
    \"2017-01-17T20:39:40.000Z\"\n     }\n   }\n ]\n"
}
```

Example:

```
[
   {
     "use": "usual",
     "type": {
       "coding": [
         {
           "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/319",
           "code": "1077",
           "display": "FIN NBR"
         }
       ]
     },
     "system": "urn:oid:3.3.3.3.3.3",
     "value": "2009",
```

```
     "period": {
       "start": "2017-01-17T20:39:40.000Z"
     }
   }
 ]
```

Nested Schema : participant

Type:

object

The list of people responsible for providing the service.

Show Source

* individual(required): The personnel present at the encounter.

* period: The start and end times for the period when the participant was involved in the encounter.

* type(required): The role of the participant in the encounter.

```
{
    "required":[
        "type",
        "individual"
    ],
    "description":"The list of people responsible for providing the service.",
    "properties":{
        "type":{
            "description":"The role of the participant in the encounter."
        },
        "period":{
            "description":"The start and end times for the period when the participant was involved in the encounter."
        },
        "individual":{
            "description":"The personnel present at the encounter."
        }
    },
    "example":"[\n  {\n    \"type\": [\n      {\n        \"coding\": [\n          {\n            \"system\":
    \"http://terminology.hl7.org/CodeSystem/v3-ParticipationType\",\n            \"code\": \"ATND\"\n          }\n
            ]\n      }\n    ],\n    \"period\": {\n      \"start\": \"2017-03-02T20:01:13.000Z\"\n    },\n
    \"individual\": {\n      \"reference\": \"Practitioner/1912007\"\n    }\n  }\n]\n  \n"
}
```

Example:

```
[
  {
    "type": [
      {
        "coding": [
          {
            "system": "http://terminology.hl7.org/CodeSystem/v3-ParticipationType",
            "code": "ATND"
          }
        ]
      }
    ],
    "period": {
      "start": "2017-03-02T20:01:13.000Z"
    },
    "individual": {
      "reference": "Practitioner/1912007"
    }
  }
]
```

Nested Schema : type

Type:

object

The type for the identifier that can be used to determine which identifier is appropriate for a specific purpose.

Example:

```
{
  "type": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/319",
        "code": "1077",
        "display": "FIN NBR"
      }
    ]
  }
}
```

# Get a list of encounters

File: r4-rest-api-v32/op-encounter-get.html

Retrieves a list of encounters that meet supplied query parameters.

Note:

* The Encounter.hospitalization.destination is returned as a reference to a contained location resource.

* The Encounter.location.location may be returned as a reference to a contained location resource.

* A populated Encounter response bundle is sorted from newest to oldest based on the start of the Encounter.period.

* The Encounter R4 resource prioritizes v3 ActEncounterCodes for the Encounter.class field. v2 ActEncounterCodes (or other codes) are only returned if no v3 ActEncounterCodes are mapped.

### Request

Query Parameters

* _count: string The maximum number of results to return.

* _id: string The logical resource ID associated with the encounter. This parameter is required if patient, subject, account, or identifier is not used.

_lastUpdated: string

The date and time range in which the encounter was last updated. Example:

* This parameter may be provided up to two times and must use the eq, ge, gt, le, or lt prefixes.

* When a value is provided without a prefix, an implied eq prefix is used.

* When provided twice, the lower value must have a ge or gt prefix and the higher value must have a le or lt prefix.

_lastUpdated=gt2014-09-24T12:00:00.000Z

_revinclude: string

token: The Provenance resource entries to be returned as part of the bundle. Example:

* May be provided once with the Provenance:target value. Example: _revinclude=Provenance:target

* May be provided with the _id/patient/subject/account parameter. Example: _id=74771957,4732066&_revinclude=Provenance:target

* When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding with the authorization type, such as user/Provenance.read, patient/Provenance.read, or system/Provenance.read.

_revinclude=Provenance:target

account: string

Example:

* The account associated with the encounters. This parameter is required if patient, subject, _id, or identifier is not used.

* The account query parameter is only supported for provider and system personas and is not available for a patient persona.

* The account query returns the relevant encounters; however, a reference to account is not populated in the results.

F703726

date: string

The date and time range that the encounter falls within.

* Must be prefixed by ge, gt, le, or lt.

* May be provided:

* Once with an appropriate prefix representing the earliest date and time or latest date and time. Examples: date=ge2015-01-01T00:00:00.000Z, date=gt2015-01-01T00:00:00.000Z, date=le2016-01-01T00:00:00.000Z, date=lt2016-01-01T00:00:00.000Z

* Twice with appropriate prefixes to indicate a specific range. Examples: date=ge2015-01-01T00:00:00.000Z&date=le2016-01-01T00:00:00.000Z, date=ge2015-01-01T00:00:00.000Z&date=lt2016-01-01T00:00:00.000Z, date=gt2015-01-01T00:00:00.000Z&date=le2016-01-01T00:00:00.000Z, date=gt2015-01-01T00:00:00.000Z&date=lt2016-01-01T00:00:00.000Z

identifier: string

An encounter's identifier. Example:

* This parameter is required if patient, subject, account, or _id is not used.

* Code details are required. System is optional. If a system is not provided, the search is performed across all systems supported by the Encounter resource.

* When a valid system is provided, the search is performed against the specific system.

urn:oid:1.2.243.58|110219457

patient: string

The patient present at the encounter. Example:

* This parameter is required if subject, account, _id, or identifier is not used.

* _count and status must be provided with this parameter.

12345

* status: string token: The status of the encounter. Valid statuses are planned, in-progress, finished, and cancelled. Example: planned

* subject: string The patient present at the encounter. This parameter is required if patient, account, _id, or identifier is not used. Example: subject=Patient/12345 or subject:Patient=12345

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/json+fhir

### Default Response

This operation supports the following authorization types:

* Provider

* Patient

* System

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Encounter?patient=12724066
```

# Get an encounter by ID

File: r4-rest-api-v32/op-encounter-id-get.html

Retrieves an individual encounter by the associated encounter ID.

Note:

* The Encounter.hospitalization.destination is returned as a reference to a contained location resource.

* The Encounter.location.location may be returned as a reference to a contained location resource.

* The Encounter R4 resource prioritizes v3 ActEncounterCodes for the Encounter.class field. v2 ActEncounterCodes (or other codes) are only returned if no v3 ActEncounterCodes are mapped.

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/json+fhir

### Default Response

This operation supports the following authorization types:

* Provider

* Patient

* System

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Encounter/97939518
```

Example Response:

```
{

Headers

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

### x-encounter-combines Response

Millennium supports the ability to logically merge an encounter record into another encounter record when both records are describing the same encounter. This ability is known as an encounter combine. If necessary, you can perform an encounter uncombine to undo this merging. When the requested encounter record is combined into another record, an inactive encounter entry is returned with a reference to the current encounter entry in the partOf field. Entries for combined encounters are only returned when retrieving the entries directly by ID. They are not returned when searching with other parameters.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Encounter/97865451
```

Example Response:

```
{
  "resourceType": "Encounter",
  "id": "97865451",
  "text": {
    "status": "generated",
    "div": "<div xmlns="http://www.w3.org/1999/xhtml"><p><b>Encounter</b></p><p><b>Type</b>: Unknown</p></div>"
  },
  "status": "unknown",

# Patch an encounter by ID

File: r4-rest-api-v32/op-encounter-id-patch.html

Patch Operations

Path | Operation | Value Type

/period/start | replace | dateTime

Description: The start time of the encounter. Example: { "op": "replace", "path": "/period/start", "value": "2015-09-01T00:00:00.000Z" } Note: When no value is provided, the Encounter.period.start is unset. When an Encounter.period.start value is provided, the time component should be provided.

/period/end | replace | dateTime

Description: The end time of the encounter. Example: { "op": "replace", "path": "/period/end", "value": "2017-09-01T00:00:00.000Z" } Note: When no value is provided, the Encounter.period.end is unset. The API can return an encounter with an In Progress status even when the Encounter.period.end is in the past. When an Encounter.period.end value is provided, the time component should be provided.

/type | replace | List of CodeableConcept

Description: The specific type of encounter. Example: { "op": "replace", "path": "/type", "value": [ { "coding": [ { "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/71", "code": "309310" } ] } ] } Note: The Encounter.type value should be a list. When a list is provided, the first value is used to patch Encounter.type.

/extension | replace | List of Extension

Description: The array of extensions for an encounter. Example: { "op": "replace", "path": "/extension", "value": [ { "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/payment-collection-status", "valueCodeableConcept": { "coding": [ { "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/4003489", "code": "269411463", "display": "1st Attempt - Left Message", "userSelected": true } ], "text": "1st Attempt - Left Message" } }, { 'op': 'replace', 'path': '/extension', 'value': [ { 'url': 'https://fhir-ehr.cerner.com/r4/StructureDefinition/estimated-financial-responsibility-amount', 'valueMoney': { 'value': 10.0, 'currency': 'USD' } } ] }, { 'op': 'replace', 'path': '/extension', 'value': [ { 'id': 'CA-0', 'extension': [ { 'id': 'ENCNTR:3339152', 'valueString': 'Self-Pay Follow Up Date', 'url':

'custom-attribute-name' }, { 'valueDateTime': '2018-05-01T12:00:00.000Z', 'url': 'custom-attribute-value' } ], 'url': 'https://fhir-ehr.cerner.com/r4/StructureDefinition/custom-attribute' } ] } ] } Note: Supported extensions that can be replaced: Payment Collection Status Estimated Financial Responsibility Amount Custom Attribute custom-attribute extensions without the ID field populated are treated as an add operation. Existing custom-attribute extensions that are not present are not modified.

/extension/- | add | Single Extension

Description: An extension for an encounter. Example: [ { "op": "add", "path": "/extension/-", "value": { "extension": [ { "id": "ENCNTR:2822522", "valueString": "ICD-9 Code", "url": "custom-attribute-name" }, { "valueString": "test string", "url": "custom-attribute-value" } ], "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/custom-attribute" } } ] Note: The custom-attribute ID field cannot be set. The add operation is currently only supported for Custom Attribute Extension.

### Request

Supported Media Types

* application/fhir+json

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* If-Match(required): string The current version of the Encounter resource.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

### Response

Supported Media Types

* application/json-patch+json

### 200 Response

The ETag response header includes the current If-Match version to use on a subsequent update.

Example Request:

```
PATCH https://fhir-ehr-code.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Encounter/97939518
```

Example Response:

```
  Cache-Control: no-cache
  Content-Length: 0
  Content-Type: text/html
  Date: Tue, 26 Mar 2019 15:42:29 GMT
  Etag: W/"10"
  Last-Modified: Tue, 26 Mar 2019 15:42:27 GMT
  Vary: Origin
  X-Request-Id: 11111111111111111111111111111111
```

Headers

* ETag: string The identifier for a specific version of a resource. This identifier is formatted as W/"" and used to specify the If-Match header value on subsequent updates.

* X-Request-Id: string The Oracle troubleshooting identifier.

* opc-request-id: string The Oracle troubleshooting identifier.

# FamilyMemberHistory

File: r4-rest-api-v32/api-familymemberhistory.html

### Description

FamilyMemberHistory

This topic describes information for the FamilyMemberHistory resource.

Overview

The FamilyMemberHistory resource represents family history for a given patient. The resource may provide a list of conditions associated with a patient's family member or the absence of a condition on a given individual. In other cases, the resource may indicate that no relevant family history exists, no significant history for a given relative exists, or the patient's family history is unknown or unobtainable.

The resource should be used as a snapshot in time and new information should be consistently retrieved through the API rather than stored in an application. In some instances, a relative could have an associated condition removed from the patient's chart, which would then no longer be exposed on a subsequent transaction. Information must be refreshed with every interaction.

Oracle Cerner recommends that an update to FamilyMemberHistory contains all relevant information that previously existed on the resource to ensure that information remains populated in the patient's chart (for example, FamilyMemberHistory.sex, FamilyMemberHistory.bornDate, FamilyMemberHistory.condition.onsetDate, and so on). The absence of this optional information may remove the existing information from the patient's chart.

Terminology Bindings

FamilyMemberHistory.category

Description: The category of the communication.

Details: FamilyMemberHistory Category

System: http://terminology.hl7.org/CodeSystem/communication-category

Details: SNOMED CT

System: http://snomed.info/sct

FamilyMemberHistory.email-status

Description: The status of the email. May be received, in-progress, or completed.

Details: FamilyMemberHistory Email Status Extension

System: http://hl7.org/fhir/task-status

Extensions

ID | Value[x} Type | Description
condition-result | CodeableConcept | Indicates the presence (positive) or absence (negative) of a given condition.
condition-lifecycle-status | CodeableConcept | Indicates whether a condition is active, inactive, resolved, and so on.
patient-adopted | Boolean | Indicates whether a patient is adopted. Only returned when true.
precision | CodeableConcept | Indicates the precision of a given value.
condition-course | CodeableConcept | Indicates a condition's progress since diagnosis.
familymemberhistory-severity | CodeableConcept | Indicates the seriousness or health impact of the family member's condition.

FamilyMemberHistory

The operations from the FamilyMemberHistory category.

Create a family member history

Method: post Path: /FamilyMemberHistory

Get a family member history by ID

Method: get Path: /FamilyMemberHistory/{ID}

Get a list of family member histories

Method: get Path: /FamilyMemberHistory

Update a family member history

Method: put Path: /FamilyMemberHistory/{ID}

# Create a family member history

File: r4-rest-api-v32/op-familymemberhistory-post.html

Creates a new family member history.

Note:

* Only the body fields below are supported. Unsupported fields are ignored.

* You cannot add conditions while creating the family member history.

**Request**

Supported Media Types

* application/fhir+json

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

Root Schema : FamilyMemberHistoryCreateBody

Type:

object

Show Source

born[x]:

The actual or approximate date of birth of the relative.

Example:

```
{
  "bornDate": "1998-12-07"
}
```

dataAbsentReason: object

dataAbsentReason

Describes why the family member's history is not available.

Example:

```
{
  "dataAbsentReason": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/history-absent-reason",
        "code": "subject-unknown"
      }
    ]
  }
}
```

deceased[x]:

A deceased flag or the approximate age of the relative at the time of death for the family member history record.

Note:

* When the deceased field is not provided, it is defaulted to deceasedBoolean false.

* When the deceasedAge is provided without the precision extension, it is defaulted to Age.

Example:

```
{
  "deceasedAge": {
    "value": 42,
    "system": "http://unitsofmeasure.org",
    "code": "a",
    "extension": [
      {
        "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
        "valueCodeableConcept": {
          "coding": [
            {
              "code": "26175008",
              "system": "http://snomed.info/sct"
            }
          ]
        }
      }
    ]
  }
}
```

```
{
  "deceasedBoolean": true
}
```

deceasedAge.extension(precision): object

deceasedAge.extension(precision)

The precision of a given value. When precision is not provided, it is defaulted to .

Note:

Age

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
      "valueCodeableConcept": {
        "coding": [
          {
            "code": "26175008",
            "system": "http://snomed.info/sct"
          }
        ]
      }
    }
  ]
}
```

name: string

The family member's name.

Example:

```
{
  "name": "Halpert, Simothy"
}
```

patient(required): object

patient

The person whom this history concerns.

Example:

```
{
  "patient": {
    "reference": "Patient/631923",
    "display": "Nilsson, Christine"
  }
}
```

relationship(required): object

relationship

The type of relationship this person has to the patient (father, mother, brother, and so on). A relationship of indicates a family member history that contains information specific to the patient that pertains to all relations of the patient.

Note:

FAMMEMB

Example:

```
{
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "BRO"
      }
    ]
  }
}
```

sex: object

sex

The birth sex of the family member.

Example:

```
{
  "sex": {
    "coding": [
      {
        "code": "male",
        "system": "http://hl7.org/fhir/administrative-gender"
      }
    ]
  }
}
```

status(required): string

A code specifying the status of the record of the family history of a specific family member.

Example:

```
{
  "status": "partial"
}
```

```
{
    "type":"object",
    "required":[
        "status",
        "patient",
        "relationship"
    ],
    "properties":{
        "status":{
            "description":"A code specifying the status of the record of the family history of a specific family
    member.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"status\": \"partial\"\n}\n</code></pre>\n",
            "type":"string"
        },
        "dataAbsentReason":{
            "description":"Describes why the family member's history is not
    available.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"dataAbsentReason\": {\n    \"coding\": [\n      {\n
    \"system\": \"http://terminology.hl7.org/CodeSystem/history-absent-reason\",\n        \"code\": \"subject-
    unknown\"\n      }\n    ]\n  }\n}\n</code></pre>\n",
            "type":"object",
            "properties":{
                "text":{
                    "type":"string"
                },
                "coding":{
                    "type":"array",
                    "items":{
                        "type":"object",
                        "properties":{
                            "system":{
                                "type":"string"
                            },
                            "code":{
                                "type":"string"
                            }
                        }
                    }
                }
            }
        },
        "patient":{
            "description":"The person whom this history concerns.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"patient\":
    {\n    \"reference\": \"Patient/631923\",\n    \"display\": \"Nilsson, Christine\"\n  }\n}\n</code></pre>\n",
            "type":"object",
            "properties":{
                "reference":{
                    "type":"string"
                }
            }
        },
        "name":{
            "description":"The family member's name.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"name\": \"Halpert,
    Simothy\"\n}\n</code></pre>\n",
            "type":"string"
        },
        "relationship":{
            "description":"The type of relationship this person has to the patient (father, mother, brother, and so
    on).<br>\n\n<b>Note:</b> A relationship of <code>FAMMEMB</code> indicates a family member history that contains
    information specific to the patient that pertains to all relations of the
    patient.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"relationship\": {\n    \"coding\": [\n      {\n
    \"system\": \"http://terminology.hl7.org/CodeSystem/v3-RoleCode\",\n        \"code\": \"BRO\"\n      }\n    ]\n
    }\n}\n</code></pre>\n",
            "type":"object",
            "properties":{
                "text":{
                    "type":"string"
                },
                "coding":{
                    "type":"array",
                    "items":{
                        "type":"object",
                        "properties":{
                            "system":{

    \"system\": \"http://unitsofmeasure.org\",\n    \"code\": \"a\"\n  }\n}\n"
}
```

Example:

```
{
  "resourceType": "FamilyMemberHistory",
  "id": "12504018-12764234",
  "status": "completed",
  "patient": {
    "reference": "Patient/12504018"
  },
  "name": "Smart, Test",
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "SIS"
      }
```

```
    ]
  },
  "sex": {
    "coding": [
      {
        "system": "http://hl7.org/fhir/administrative-gender",
        "code": "female"
      }
    ]
  },
  "bornDate": "1993-08-08",
  "deceasedAge": {
    "extension": [
      {
        "valueCodeableConcept": {
          "coding": [
            {
              "system": "http://snomed.info/sct",
              "code": "397669002"
            }
          ]
        },
        "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision"
      }
    ],
    "value": 18,
    "system": "http://unitsofmeasure.org",
    "code": "a"
  }
}
```

Nested Schema : dataAbsentReason

Type:

object

Describes why the family member's history is not available.

Example:

```
{
  "dataAbsentReason": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/history-absent-reason",
        "code": "subject-unknown"
      }
    ]
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"Describes why the family member's history is not available.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n
      \"dataAbsentReason\": {\n    \"coding\": [\n      {\n        \"system\":

        ]\n  }\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : deceasedAge.extension(precision)

Type:

object

The precision of a given value. When precision is not provided, it is defaulted to .

Note:

Age

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
      "valueCodeableConcept": {
        "coding": [
          {
            "code": "26175008",
            "system": "http://snomed.info/sct"
          }
        ]
      }
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The precision of a given value.<br>\n\n<b>Note:</b> When precision is not provided, it is defaulted

        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : patient

Type:

object

The person whom this history concerns.

Example:

```
{
  "patient": {
    "reference": "Patient/631923",
    "display": "Nilsson, Christine"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The person whom this history concerns.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"patient\": {\n
    \"reference\": \"Patient/631923\",\n    \"display\": \"Nilsson, Christine\"\n  }\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : relationship

Type:

object

The type of relationship this person has to the patient (father, mother, brother, and so on). A relationship of indicates a family member history that contains information specific to the patient that pertains to all relations of the patient.

Note:

FAMMEMB

Example:

```
{
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "BRO"
      }
    ]
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The type of relationship this person has to the patient (father, mother, brother, and so
    on).<br>\n\n<b>Note:</b> A relationship of <code>FAMMEMB</code> indicates a family member history that contains
    information specific to the patient that pertains to all relations of the
    patient.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"relationship\": {\n    \"coding\": [\n      {\n

    }\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : sex

Type:

object

The birth sex of the family member.

Example:

```
{
  "sex": {
    "coding": [
      {
        "code": "male",
        "system": "http://hl7.org/fhir/administrative-gender"
      }
    ]
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The birth sex of the family member.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"sex\": {\n

### Response

Supported Media Types

* application/fhir+json

### 201 Response

**OK**

Headers

* ETag: string The identifier for a specific version of a resource. This identifier is formatted as W/"" and used to specify the If-Match header value on subsequent updates.

Location: string

The URL location of the created entity. Example:

`https://fhir-ehr-code.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/FamilyMemberHistory/642774`

* X-Request-Id: string Oracle troubleshooting identifier.

* opc-request-id: string Oracle troubleshooting identifier.

### Default Response

This operation supports the following authorization types: The response header indicates the current version to use on a subsequent update.

* Provider

* System

Example Request:

`POST https://fhir-ehr-code.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/FamilyMemberHistory`

Example Response:

```
  Cache-Control: no-cache
  Content-Length: 0
  Content-Type: application/fhir+json
  Date: Mon, 06 Apr 2020 19:00:43 GMT
  Etag: W/"1"
  Location: https://fhir-ehr-code.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/FamilyMemberHistory/17228728
  Last-Modified: Mon, 06 Apr 2020 19:00:43 GMT
  Vary: Origin
  X-Request-Id: 11111111111111111111111111111111

# Get a family member history by ID

File: r4-rest-api-v32/op-familymemberhistory-id-get.html

Retrieves an individual family member history by the associated ID.

Note: Family member histories with the FAMMEMB relation are sometimes system generated.

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

This operation supports the following authorization types:

* Provider

* Patient

* System

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/FamilyMemberHistory/12504018-12764234
```

# Get a list of family member histories

File: r4-rest-api-v32/op-familymemberhistory-get.html

Retrieves a list of family member histories that meet supplied query parameters.

Note: Family member histories with the FAMMEMB relation are sometimes system generated.

### Request

Query Parameters

* _id: string The logical resource ID. This parameter is required if patient is not used.

* patient: string The identity of a subject to list family member history items for. This parameter is required if _id is not used. Example: 12345

* status: string The record status for a specific family member. This parameter is only provided when the patient search parameter is used.

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

This operation supports the following authorization types:

* Provider

* Patient

* System

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/FamilyMemberHistory?patient=12504018
```

Example Response:

```
{
  "resourceType": "Bundle",
  "id": "e989e20d-5cfc-4b11-ab43-95ba1a684063",
  "type": "searchset",
  "link": [

# Update a family member history

File: r4-rest-api-v32/op-familymemberhistory-id-put.html

Updates a family member history.

Note:

* You can remove conditions from a family member history if you set the condition-lifecycle-status modifierExtension to entered-in-error with a system of http://terminology.hl7.org/CodeSystem/condition-ver-status. Only existing conditions can be removed and the condition ID must be provided.

* Only perform an update directly after a family member history is retrieved. If a condition ID is returned for the GET request, the ID must be provided on the subsequent update and must match the condition ID returned from the GET.

### Request

Supported Media Types

* application/fhir+json

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

Root Schema : FamilyMemberHistoryUpdateBody

Type:

object

Show Source

* condition: object condition The significant conditions (or condition) that the family member had. Note: Each item on the list must represent a distinct condition.

condition.code: object

condition.code

The actual condition specified.

Example:

```
{
  "code": {
    "coding": [
      {
        "system": "http://snomed.info/sct",
        "code": "57054005"
      }
    ]
  }
}
```

condition.extension(condition-course): object

condition.extension(condition-course)

An indication of a condition's progress since diagnosis.

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-course",
      "valueCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "58158008"
          }
        ]
      }
    }
  ]
}
```

condition.extension(familymemberhistory-severity): object

condition.extension(familymemberhistory-severity)

A qualification of the seriousness or impact on health of the family member condition.

Example:

```
{
  "extension": [
    {
      "url": "http://hl7.org/fhir/StructureDefinition/familymemberhistory-severity",
      "valueCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "24484000"
          }
        ]
      }
    }
  ]
}
```

condition.id: string

The unique ID for inter-element referencing. If a is returned on a read, it must be provided on an update.

Note:

condition.id

Example:

```
{
  "id": "111"
}
```

condition.modifierExension(condition-lifecycle-status): object

condition.modifierExension(condition-lifecycle-status)

An indication of whether a condition is active, inactive, resolved, and so on. The lifecycle status indicates the relevance of a given condition. If a condition is resolved or inactivated, it may no longer be clinically relevant. The lifecycle status may not be returned if it is not applicable to the given condition.

Example:

```
{
  "modifierExtension": [
     {
       "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-lifecycle-status",
       "valueCodeableConcept": {
         "coding": [
           {
             "system": "http://terminology.hl7.org/CodeSystem/condition-clinical",
             "code": "active"
           }
         ]
       }
    }
  ]
}
```

```
{
  "modifierExtension": [
     {
       "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-lifecycle-status",
       "valueCodeableConcept": {
         "coding": [
           {
             "system": "http://terminology.hl7.org/CodeSystem/condition-ver-status",
             "code": "entered-in-error"
           }
         ]
       }
    }
  ]
}
```

condition.modifierExension(condition-result): object

condition.modifierExension(condition-result)

An indication of the presence (positive) or absence (negative) of a given condition. Must be provided. The result may indicate the absence of a condition, which may lead to different clinical decisions than if the result were positive.

Example:

```
{
  "modifierExtension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-result",
      "valueCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "10828004"
          }
        ]
      }
    }
  ]
}
```

condition.note: object

condition.note

An area where general notes can be placed about this specific condition.

Example:

```
{
  "note": [
    {
      "text": "Comment about condition"
    }
  ],
}
```

condition.onset[x]:

The age of onset. When is provided without the precision extension, it is defaulted to .

Note:

onsetAge

Age

Example:

```
{
  "onsetAge": {
    "value": 42,
    "system": "http://unitsofmeasure.org",
    "code": "a",
    "extension": [
      {
        "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
        "valueCodeableConcept": {
          "coding": [
            {
              "code": "26175008",
              "system": "http://snomed.info/sct"
            }
          ]
        }
      }
    ]
  }
}
```

condition.onsetAge.extension(precision): object

condition.onsetAge.extension(precision)

The precision of a given value. When precision is not provided, it is defaulted to .

Note:

Age

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
      "valueCodeableConcept": {
        "coding": [
          {
            "code": "26175008",
            "system": "http://snomed.info/sct"
          }
        ]
      }
    }
  ]
}
```

extension(patient-adopted): object

extension(patient-adopted)

An indication of whether a patient is adopted. Only returned when the relationship is and the value is .

Note:

FAMMEMB

true

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/patient-adopted",
      "valueBoolean": true
    }
  ]
}
```

* ID: string The logical ID of the resource to update. Example: { "id": "12504018-12764234" }

relationship(required): object

relationship

The type of relationship this person has with the patient (father, mother, brother, and so on). A relationship of indicates a family member history that contains information specific to the patient that pertains to all relations of the patient. https://hl7.org/fhir/familymemberhistory-definitions.html#FamilyMemberHistory.relationship

Note:

FAMMEMB

URL:

Example:

```
{
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "BRO"
      }
    ]
  }
}
```

```
{
    "type":"object",
    "required":[
        "relationship"
    ],
    "properties":{
        "ID":{
            "type":"string",
            "description":"The logical ID of the resource to update.\n",

      "code": "a"
    },
    "note": [
      {
        "text": "Cancer is common in the family"
      }
    ]
  }
 ]
}
```

Nested Schema : condition

Type:

object

The significant conditions (or condition) that the family member had. Each item on the list must represent a distinct condition.

Note:

Nested Schema : condition.code

Type:

object

The actual condition specified.

Example:

```
{
  "code": {
    "coding": [
      {
        "system": "http://snomed.info/sct",
        "code": "57054005"
      }
    ]
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The actual condition specified.<br>\n<b>Example:</b>\n<pre><code>{\n  \"code\": {\n    \"coding\":
    [\n      {\n        \"system\": \"http://snomed.info/sct\",\n        \"code\": \"57054005\"\n      }\n    ]\n
    }\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
```

```
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : condition.extension(condition-course)

Type:

object

An indication of a condition's progress since diagnosis.

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-course",
      "valueCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "58158008"
          }
        ]
      }
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"An indication of a condition's progress since diagnosis.<br>\n<b>Example:</b>\n\n<pre><code>{\n

    ]\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : condition.extension(familymemberhistory-severity)

Type:

object

A qualification of the seriousness or impact on health of the family member condition.

Example:

```
{
  "extension": [
    {
      "url": "http://hl7.org/fhir/StructureDefinition/familymemberhistory-severity",
      "valueCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "24484000"
          }
        ]
      }
```

```
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"A qualification of the seriousness or impact on health of the family member
    condition.<br>\n<b>Example:</b>\n<pre><code>{\n  \"extension\": [\n    {\n      \"url\":

    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : condition.modifierExension(condition-lifecycle-status)

Type:

object

An indication of whether a condition is active, inactive, resolved, and so on. The lifecycle status indicates the relevance of a given condition. If a condition is resolved or inactivated, it may no longer be clinically relevant. The lifecycle status may not be returned if it is not applicable to the given condition.

Example:

```
{
  "modifierExtension": [
     {
       "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-lifecycle-status",
       "valueCodeableConcept": {
         "coding": [
           {
             "system": "http://terminology.hl7.org/CodeSystem/condition-clinical",
             "code": "active"
           }
         ]
       }
    }
  ]
}
```

```
{
  "modifierExtension": [
     {
       "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-lifecycle-status",
       "valueCodeableConcept": {
         "coding": [
           {
             "system": "http://terminology.hl7.org/CodeSystem/condition-ver-status",
             "code": "entered-in-error"
           }
         ]
       }
    }
  ]
}
```

Show Source

                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : condition.modifierExension(condition-result)

Type:

object

An indication of the presence (positive) or absence (negative) of a given condition. Must be provided. The result may indicate the absence of a condition, which may lead to different clinical decisions than if the result were positive.

Example:

```
{
  "modifierExtension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/condition-result",
      "valueCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "10828004"
          }
        ]
      }
    }
  ]
}
```

Show Source

            }
        }
    }
}
```

Nested Schema : condition.note

Type:

object

An area where general notes can be placed about this specific condition.

Example:

```
{
  "note": [
    {
      "text": "Comment about condition"
    }
  ],
}
```

Show Source

* authorReference: object authorReference

* text: string

* time: string

```
{
    "description":"An area where general notes can be placed about this specific
    condition.<br>\n<b>Example:</b>\n<pre><code>{\n  \"note\": [\n    {\n      \"text\": \"Comment about condition\"\n
        }\n  ],\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "authorReference":{
            "type":"object",
            "properties":{
                "reference":{
                    "type":"string"
                }
            }
        },
        "time":{
            "type":"string"
        },
        "text":{
            "type":"string"
        }
    }
}
```

Nested Schema : condition.onsetAge.extension(precision)

Type:

object

The precision of a given value. When precision is not provided, it is defaulted to .

Note:

Age

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
      "valueCodeableConcept": {
        "coding": [
          {
            "code": "26175008",
            "system": "http://snomed.info/sct"
          }
        ]
      }
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The precision of a given value.<br>\n\n<b>Note:</b> When precision is not provided, it is defaulted

            ]\n      }\n    }\n  ]\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
```

```
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : extension(patient-adopted)

Type:

object

An indication of whether a patient is adopted. Only returned when the relationship is and the value is .

Note:

FAMMEMB

true

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/patient-adopted",
      "valueBoolean": true
    }
  ]
}
```

Show Source

* url: string

```
{
    "description":"An indication of whether a patient is adopted.<br>\n\n<b>Note:</b> Only returned when the
    relationship is <code>FAMMEMB</code> and the value is <code>true</code>.<br>\n\n<b>Example:</b>\n<pre><code>{\n
    \"extension\": [\n    {\n      \"url\": \"https://fhir-ehr.cerner.com/r4/StructureDefinition/patient-adopted\",\n

    "type":"object",
    "properties":{
        "url":{
            "type":"string"
        }
    }
}
```

Nested Schema : relationship

Type:

object

The type of relationship this person has with the patient (father, mother, brother, and so on). A relationship of indicates a family member history that contains information specific to the patient that pertains to all relations of the patient. https://hl7.org/fhir/familymemberhistory-definitions.html#FamilyMemberHistory.relationship

Note:

FAMMEMB

URL:

Example:

```
{
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "BRO"
      }
    ]
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The type of relationship this person has with the patient (father, mother, brother, and so
    on).<br>\n\n<b>Note:</b> A relationship of <code>FAMMEMB</code> indicates a family member history that contains
    information specific to the patient that pertains to all relations of the patient.<br>\n<b>URL:</b>
    https://hl7.org/fhir/familymemberhistory-
```

```
    definitions.html#FamilyMemberHistory.relationship<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"relationship\": {\n

    \"code\": \"BRO\"\n      }\n    ]\n  }\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : FamilyMemberHistoryCreateBody

Type:

object

Show Source

born[x]:

The actual or approximate date of birth of the relative.

Example:

```
{
  "bornDate": "1998-12-07"
}
```

dataAbsentReason: object

dataAbsentReason

Describes why the family member's history is not available.

Example:

```
{
  "dataAbsentReason": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/history-absent-reason",
        "code": "subject-unknown"
      }
    ]
  }
}
```

deceased[x]:

A deceased flag or the approximate age of the relative at the time of death for the family member history record.

Note:

* When the deceased field is not provided, it is defaulted to deceasedBoolean false.

* When the deceasedAge is provided without the precision extension, it is defaulted to Age.

Example:

```
{
  "deceasedAge": {
    "value": 42,
    "system": "http://unitsofmeasure.org",
    "code": "a",
    "extension": [
      {
        "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
        "valueCodeableConcept": {
          "coding": [
            {
              "code": "26175008",
              "system": "http://snomed.info/sct"
            }
          ]
        }
      }
    ]
  }
}
{
```

```
  "deceasedBoolean": true
}
```

deceasedAge.extension(precision): object

deceasedAge.extension(precision)

The precision of a given value. When precision is not provided, it is defaulted to .

Note:

Age

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
      "valueCodeableConcept": {
        "coding": [
          {
            "code": "26175008",
            "system": "http://snomed.info/sct"
          }
        ]
      }
    }
  ]
}
```

name: string

The family member's name.

Example:

```
{
  "name": "Halpert, Simothy"
}
```

patient(required): object

patient

The person whom this history concerns.

Example:

```
{
  "patient": {
    "reference": "Patient/631923",
    "display": "Nilsson, Christine"
  }
}
```

relationship(required): object

relationship

The type of relationship this person has to the patient (father, mother, brother, and so on). A relationship of indicates a family member history that contains information specific to the patient that pertains to all relations of the patient.

Note:

FAMMEMB

Example:

```
{
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "BRO"
      }
    ]
  }
}
```

sex: object

sex

The birth sex of the family member.

Example:

```
{
  "sex": {
    "coding": [
      {
        "code": "male",
        "system": "http://hl7.org/fhir/administrative-gender"
      }
    ]
  }
}
```

status(required): string

A code specifying the status of the record of the family history of a specific family member.

Example:

```
{
  "status": "partial"
}
```

```
{
    "type":"object",
    "required":[
        "status",
        "patient",
        "relationship"
    ],
    "properties":{
        "status":{
            "description":"A code specifying the status of the record of the family history of a specific family
    member.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"status\": \"partial\"\n}\n</code></pre>\n",
            "type":"string"
        },
        "dataAbsentReason":{
            "description":"Describes why the family member's history is not
    available.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"dataAbsentReason\": {\n    \"coding\": [\n      {\n
    \"system\": \"http://terminology.hl7.org/CodeSystem/history-absent-reason\",\n        \"code\": \"subject-
    unknown\"\n      }\n    ]\n  }\n}\n</code></pre>\n",
            "type":"object",
            "properties":{
                "text":{

            }
        }
    }
}
```

Nested Schema : deceasedAge.extension(precision)

Type:

object

The precision of a given value. When precision is not provided, it is defaulted to .

Note:

Age

Example:

```
{
  "extension": [
    {
      "url": "https://fhir-ehr.cerner.com/r4/StructureDefinition/precision",
      "valueCodeableConcept": {
        "coding": [
          {
            "code": "26175008",
            "system": "http://snomed.info/sct"
          }
```

```
        ]
      }
    }
  ]
}
```

            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : patient

Type:

object

The person whom this history concerns.

Example:

```
{
  "patient": {
    "reference": "Patient/631923",
    "display": "Nilsson, Christine"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The person whom this history concerns.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"patient\": {\n
    \"reference\": \"Patient/631923\",\n    \"display\": \"Nilsson, Christine\"\n  }\n}\n</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : relationship

Type:

object

The type of relationship this person has to the patient (father, mother, brother, and so on). A relationship of indicates a family member history that contains information specific to the patient that pertains to all relations of the patient.

Note:

FAMMEMB

Example:

```
{
  "relationship": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v3-RoleCode",
        "code": "BRO"
      }
    ]
  }
```

```
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The type of relationship this person has to the patient (father, mother, brother, and so
    on).<br>\n\n<b>Note:</b> A relationship of <code>FAMMEMB</code> indicates a family member history that contains

# FinancialTransaction

File: r4-rest-api-v32/api-financialtransaction.html

### Description

FinancialTransaction

This topic describes information for the FinancialTransaction resource.

Overview

The FinancialTransaction resource provides the ability to record and exchange financial payment and adjustment information related to patient healthcare services. This custom resource is implemented through extensions on the Basic resource.

Terminology Bindings

Basic.extension[x].valueCodeableConcept

Description: The category of payment type codes. Whether this is a payment or adjustment. This binding is used in financial-transaction-type extensions

Details: Payment Type Codes

System: http://terminology.hl7.org/CodeSystem/payment-type

Basic.extension[x].valueCodeableConcept

Description: The payment method of the transaction. This binding is used in financial-transaction-method extensions.

Details: v2 Payment Method Code

System: http://terminology.hl7.org/CodeSystem/v2-0570

Basic.extension[x].valueMoney.currency

Description: Currency codes from ISO 4217 (see https://www.iso.org/iso-4217-currency-codes.html). This binding is used for financial-transaction-tendered-amount extensions.

Details: Currencies

System: urn:iso:std:iso:4217

Basic.extension[x].valueMoney.currency

Description: Currency codes from ISO 4217 (see https://www.iso.org/iso-4217-currency-codes.html). This binding is used for financial-transaction-amount extensions.

Details: Currencies

System: urn:iso:std:iso:4217

Basic.extension[x].extension[x].valueMoney.currency (for more information, see the Extensions section of this topic)

Description: Currency codes from ISO 4217 (see https://www.iso.org/iso-4217-currency-codes.html). This binding is used for amount extensions nested under financial-transaction-allocation extensions.

Details: Currencies

System: urn:iso:std:iso:4217

Extensions

Table - Extensions

ID | Value[x} Type | Description
apply-first-in-first-out | boolean | Whether to apply FIFO logic for recurring encounters.
financial-transaction-account-number | string | A value associated with the specific payment method usually represented as the last four digits of a credit card, the check number, the EFT number, or Lockbox number.
financial-transaction-alias | string | A client-defined value to represent the combination of the type, subtype, and reason describing the financial transaction.
financial-transaction-allocation | None (contains nested extensions) | Defines how the payment or adjustment is to be allocated across other resources.
financial-transaction-amount | Money | The total amount of the financial transaction.
financial-transaction-card-brand | string | Identifies the brand of credit card when credit card is used as a payment method.
financial-transaction-date | date | Represents the expiration date if the method is card or check date if the method is check.
financial-transaction-location | string | A client-configured value representing the location or workflow that the payment was received in.
financial-transaction-method | string | Describes the method of payment for the financial transaction.
financial-transaction-tendered-amount | Money | The amount of cash originally tendered for payment. This value should be greater than or equal to the amount of the cash payment.
financial-transaction-type | CodeableConcept | The classification of the transaction.

FinancialTransaction

The operations from the FinancialTransaction category.

Create a financial transaction

Method: post Path: /Basic

# Create a financial transaction

File: r4-rest-api-v32/op-basic-post.html

Creates a new financial transaction.

Note:

* Only the body fields mentioned below are supported. Unsupported fields are ignored, or can result in errors.

* When integrating your application with a customer's environment, the customer must provide the appropriate financial-transaction-alias values to send with the financial transaction.

* The Oracle Cerner Revenue Cycle Patient Accounting application must be in use at a customer site to create meaningful financial transactions.

* When creating financial transactions, a Basic OAuth2 token scope is required in addition to a FinancialTransaction Oauth2 token scope.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

### Request

Supported Media Types

* application/fhir+json

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

Root Schema : FinancialTransactionCreate

Type:

object

Show Source

code(required): object

code

Identifies the type of resource, equivalent to the resource name for other resources.

identifier(required): array

identifier

Minimum Number of Items:

Identifier assigned to the resource for business purposes.

Note:

* At least one external transaction identifier must be provided.

* The identifier can contain alphanumeric value and no special characters.

* The length of the identifier cannot exceed 250 character.

resourceType(required): string

Allowed Values:

[ "Basic" ]

The type of the FHIR resource.

```
{
    "type":"object",
    "required":[
        "resourceType",
        "identifier",
        "code"
    ],
    "properties":{
        "resourceType":{
            "description":"<p>The type of the FHIR resource.</p>\n",
            "type":"string",
            "enum":[
                "Basic"
            ]
        },
        "identifier":{
            "description":"<p>Identifier assigned to the resource for business purposes.</p>\n<p><b>Note:</b> \n  <ul>\n
         <li>At least one external transaction identifier must be provided.</li>\n     <li>The identifier can contain
    alphanumeric value and no special characters.</li>\n     <li>The length of the identifier cannot exceed 250
    character.</li>\n  </ul>\n</p>\n",
            "type":"array",
            "minItems":1,
            "items":{
                "type":"object",
                "properties":{

### Response

Supported Media Types

* application/fhir+json

### Default Response

The response header indicates the current version to use on a subsequent update.

Example creation of a cash payment.

Example Request:

```
POST https://fhir-ehr-code.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Basic
```

Example Request Body:

```
{
    'resourceType': 'Basic',
    'code': {
      'coding': [
        {
          'code': 'FinancialTransaction'
        }
      ]
    },
    'identifier': [
      {
        'value': '14266754',
```

```
      'use': 'usual'
    }
  ],

# Goal

File: r4-rest-api-v32/api-goal.html

### Description

Goal

This topic describes information for the Goal resource.

Overview

The Goal resource describes intended objectives for a patient. A goal is typically expressed as a desired outcome or health state to be achieved by a patient over a period or at a specific point in time. A goal may address preventative health or mitigation of a diagnosis or problem. Goals can be non-healthcare related (for example, dance at a wedding).

This resource supports the US Core Goal Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0.

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site.

Goal.lifecycleStatus

Description: The codes that reflect the current state of a goal and whether the goal is still being targeted.

Details: Goal Lifecycle Status Codes

System: http://hl7.org/fhir/goal-status

Goal.achievementStatus

Description: The progression, or lack thereof, towards the goal against the target.

Details: Goal Achievement Status Codes

System: http://terminology.hl7.org/CodeSystem/goal-achievement

Goal.category

Description: The codes for grouping and sorting goals.

Details: Category

System: http://terminology.hl7.org/CodeSystem/goal-category

Goal.description

Description: The human-readable or coded description (or both) of a specific object of care.

Details: LOINC

System:http://loinc.org/

Details:

SNOMED CT

Goal

The operations from the Goal category.

Get a goal by ID

Method: get Path: /Goal/{ID}

Get a list of goals

Method: get Path: /Goal

# Get a goal by ID

File: r4-rest-api-v32/op-goal-id-get.html

Retrieves an individual goal by the associated goal ID.

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

## Get a list of goals

File: r4-rest-api-v32/op-goal-get.html

Retrieves a list of goals that meet supplied query parameters.

### Request

Query Parameters

* _id: string The logical resource ID associated with the goal. This parameter is required if patient is not used. This parameter may not be provided at the same time as the patient or target-date. Example: _id=7891

* _revinclude: string Provenance resource entries to be returned as part of the bundle. The _revinclude parameter may be provided once with the value Provenance:target. Example:_revinclude=Provenance:target The _revinclude parameter may be provided with the _id/patient parameter. For example, _id=178866310&_revinclude=Provenance:target. When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding to the authorization type, such as user/Provenance.read, patient/Provenance.read or system/Provenance.read.

* patient: string The patient who has the goal. This parameter is required if _id is not used. Example: patient=12345

* target-date: string A date or date range from which to find goals. The target-date parameter may be provided once with a prefix to imply a date range or without a prefix to search for goals at a specific date. Alternately, it may be provided twice with le, lt, ge, or gt prefixes to search for goals within a specific range. The date and prefix pairs must create a closed range. Example: target-date=ge2016-10-01&target-date=le2016-12-01

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

# Health Cards

File: r4-rest-api-v32/api-health-cards.html

### Description

Health Cards

The following topic describes information for the Health-Cards resource.

Overview

A health card is a verifiable, digital artifact that represents a limited set of information about an individual, relevant to a specific health status. The card can be presented in digital and physical form. A QR code representing the card can be shared from a device or a piece of paper. Information in the health card can be used to determine the authenticity of the artifact and its issuer. The goal is to provide individuals with the choice to share limited health information in a portable and secure manner.

Health cards are designed in conformance with the emerging SMART Health Card framework (technical specification) and HL7 FHIR Vaccination and Testing IG.

The $health-cards-issue operation adheres to the FHIR specification and returns health cards as verifiableCredentials in a FHIR Parameters resource. These verifiable credentials are JSON Web Signatures with a compressed payload.

See the specification for details on the protocols for the following actions:

Encoding and decoding the health cards JWS

Signing and verifying the JWS

The FHIR Bundle encompassed in the health card adheres to the Data Minimization profiles defined by HL7 FHIR Vaccination and Testing IG.

Supported Health Card Types

Description | FHIR Bundle Profile | Credential Types
COVID-19 vaccination | For more information, see the Vaccination Credentials (DM) section in this topic. | https://smarthealth.cards#health-card https://smarthealth.cards#immunization https://smarthealth.cards#covid19
COVID-19 laboratory test result | For more information, see the Laboratory Test Result Credentials (DM) section in this topic. | https://smarthealth.cards#health-card https://smarthealth.cards#laboratory https://smarthealth.cards#covid19

A supported health card type is returned if the following conditions are met:

The intersection of the requested credential types matches the credential types of the health card type

The system contains valid data to satisfy the health card types FHIR Bundle profile

Supported FHIR Bundle Profiles

Below are the FHIR Bundle profiles for the resources returned in a health card type.

Vaccination Credentials (DM)

This profile represents the patient and the clinical data related to a vaccination.

The following resources are included:

A single Patient resource that follows the VaccinationCredentialPatientDM profile with the following fields, if valued:

Patient official name

Date of Birth

One or more Immunization resources that follow the VaccinationCredentialImmunizationDM profile with the following fields, if valued:

Status

Vaccine administered

Patient

Administration date/time

Vaccine lot number

Performer

Organization that performed the action

Terminology Bindings

Immunization.vaccineCode

Description: The administered vaccine product.

Details: CVX

System: http://hl7.org/fhir/sid/cvx

Authorization Types

The OAuth2 token must include Patient.read and Immunization.read scopes.

Laboratory Test Result Credentials (DM)

This profile represents the patient and the clinical data related to a laboratory test result.

The following resources are included:

A single Patient resource that follows the VaccinationCredentialPatientDM profile with the following fields, if valued:

Patient official name

Date of Birth

One or more Observation resources that follow the InfectiousDiseaseLaboratoryResultObservationDM profile with the following fields, if valued:

Status

Code

Subject

Effective date time

Value (one of)

Value codeable concept

Value quantity

Value string

Reference range

Terminology Bindings

Observation.code

Description: The codes that identify names of simple observations.

Details: LOINC

System: http://loinc.org

Details: LOINC (Covid19)

System: http://loinc.org

Observation.valueCodeableConcept

Description: The codes for the values of the observation.

Details: SNOMED CT

System: http://snomed.info/sct

The OAuth2 token must include and scopes.

Authorization Types

Patient.read

Observation.read

Health Cards

The operations from the Health Cards category.

Issue health cards for an existing patient

Method: post Path: /Patient/{ID}/$health-cards-issue

# Issue health cards for an existing patient

File: r4-rest-api-v32/op-patient-id-health-cards-issue-post.html

Issues health cards for an existing patient who meets the supplied request.

POST /Patient/:id/$health-cards-issue

Note:

* The specification is considered stable; however, it has yet to undergo the HL7 FHIR balloting process that may introduce changes. Consider the possible impacts while implementing health cards in a production environment.

* Only the body fields mentioned below are supported. Unsupported fields are ignored.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

See the Supported Health Card Types and the Authorization Types sections of the associated FHIR Bundle Profile for scopes required for specific health card types.

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* Authorization: string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* Content-Type(required): string Specifies the content type of the request entity body. See what the resource's operation produces for what is supported.

Body ()

Root Schema : HealthCardsBody

Type:

object

Show Source

_since:

The specific point of time after which resources should be included in the health cards.

Note:

* The value must be in the form of valueDateTime (see the FHIR dateTime datatype format).

* Only one value can be defined.

Example:

[ { "name": "_since", "valueDateTime": "2020-04-01" } ]

credentialType(required):

The type of the health cards requested.

Note:

* The value must be in the form of valueUri.

* More than one value for the credentialType can be defined by repeating the element with a different valueUri.

* Multiple values in a request are interpreted as a request for the intersection of the requested types (logical AND).

* Oracle recommends adding multiple credential types to the request to match the intended health card type most precisely. This action helps to avoid any integration issues as support for additional health card types is added.

* See the Supported Health Card Types section in the Health Cards resource overview for a list of valid credential types.

Example:

[ { "name": "credentialType", "valueUri": "https://smarthealth.cards#covid19" }, { "name": "credentialType", "valueUri": "https://smarthealth.cards#immunization" } ]

* parameter(required): Parameters defined by the operation. Example: { "parameter": [ { "name": "credentialType", "valueUri": "https://smarthealth.cards#health-card" } ] }

* resourceType(required): string Allowed Values: [ "Parameters" ] The type of the FHIR resource.

```
{
    "type":"object",
    "required":[
        "resourceType",
        "parameter",
        "credentialType"
    ],
    "properties":{
        "resourceType":{
            "description":"The type of the FHIR resource.\n",
            "type":"string",
            "enum":[
                "Parameters"
            ]
        },
        "parameter":{
            "description":"Parameters defined by the operation.\n",

# Immunization

File: r4-rest-api-v32/api-immunization.html

### Description

Immunization

This topic describes information for the Immunization resource.

Overview

The Immunization resource is intended to cover the recording of current and historical administration of vaccines to patients across all healthcare disciplines, in all care settings, and all regions. This resource contains the functionality to query a patient's immunization history. You can find detailed administration records in the MedicationAdministration resource, while this Immunization resource represents the known vaccination history regardless of where the administration itself was done.

An immunization reaction may indicate an allergy or intolerance. If so, create a separate AllergyIntolerance resource instance as well.

Note that while the terms immunization and vaccination are not clinically identical, for the purposes of FHIR resources, the terms are used synonymously.

This resource supports the US Core Immunization Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0.

The following fields are returned if valued:

ID

Immunization Record Identifier

Status

Status reason

Vaccine administered

Patient

Patient encounter

Occurrence DateTime

Primary Source

Report Origin

Location

Vaccine manufacturer

Vaccine lot number

Vaccine expiration date

Vaccine administration site

Vaccine administration route

Dosage administered

Performer

Type of performer (ordering or administering)

Individual who performed

Reference (Practitioner | Organization)

Note (follows Annotation structure)

Reference (Practitioner)

Time

Text

Protocol applied

Dose Number String

Target disease

Terminology Bindings

Immunization.statusReason

Description: The reason why the immunization was not performed.

Details: Immunization Status Reason

System: http://terminology.hl7.org/CodeSystem/v3-ActReason

Details: For more information, see Code Set 30440 Expire Reasons under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/30440

Immunization.vaccineCode

Description: The vaccine product administered.

The CVX binding is always returned. An NDC binding is returned when available.

Note:

Details: CVX

System: http://hl7.org/fhir/sid/cvx

Details: NDC

System: http://hl7.org/fhir/sid/ndc

Details: For more information, see Code Set 72 Clinical Event Codes under the Proprietary Systems section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/72

Immunization.reportOrigin

Description: The source of an immunization record when not reported by the person who administered the vaccine.

Details: Immunization Report Origin

System: http://terminology.hl7.org/CodeSystem/immunization-origin

Details: For more information, see Code Set 30200 Result Source under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/30200

Immunization.site

Description: The site at which the vaccine was administered.

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 97 Medication Administration Site under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/97

Immunization.route

Description: The path by which the vaccine product was taken into the body.

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 4001 Medication Administration Route under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4001

Immunization.protocolApplied.targetDisease

Description: The vaccine-preventable disease the dose is being administered against.

Details: CVX

System: http://hl7.org/fhir/sid/cvx

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 4003106 Vaccine Group under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4003106

Immunization

The operations from the Immunization category.

Create an immunization

Method: post Path: /Immunization

Get a list of immunizations

Method: get Path: /Immunization

Get an immunization by ID

Method: get Path: /Immunization/{ID}

Update an immunization

Method: put Path: /Immunization/{ID}

# Create an immunization

File: r4-rest-api-v32/op-immunization-post.html

Creates a new immunization.

Note: Only the body fields mentioned below are supported. Unsupported fields are ignored or can result in errors.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

**Request**

Supported Media Types

* application/fhir+json

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

The body of the create operation

Root Schema : ImmunizationCreate

Type:

object

A summary representation of the create (POST) operation for an immunization.

Show Source

doseQuantity: object

doseQuantity

The quantity of vaccine product that was administered.

Example:

```
{
  "doseQuantity": {
    "value": 1.5,
    "unit": "mL",
    "system": "http://unitsofmeasure.org",
    "code": "mL"
  }
}
```

encounter(required): object

encounter

The visit, admission, or other contact between the patient and healthcare provider that the immunization was part of.

Note:

* encounter is a required field to create charted immunizations.

* encounter is not a required field to create staged immunizations.

Example:

```
{
  "encounter": {
    "reference": "Encounter/36209678"
  }
}
```

expirationDate: string

The date when the vaccine batch expires.

Example:

```
{
  "expirationDate": "2019-07-30"
}
```

lotNumber: string

The lot number of the vaccine product.

Example:

```
{
  "lotNumber": "123ab",
}
```

manufacturer: object

manufacturer

The name of the vaccine manufacturer.

Example:

```
{
  "manufacturer": {
    "display": "Adams Laboratories"
  }
}
```

note: array

note

Extra information about the immunization that is not conveyed by the other attributes.

Example:

```
{
  "authorReference": {
    "reference": "Practitioner/2028012",
    "display": "Doe, Jane"
  },
  "time": "2019-06-09T14:03:26-05:00",
  "text": "Additional details"
}
```

occurrenceDateTime(required): string

The date when the vaccine was administered or to be administered.

Example:

```
{
  "occurrenceDateTime": "2019-07-05T10:35:00-05:00"
}
```

patient(required): object

patient

The patient who received or did not receive the immunization.

Example:

```
{
  "patient": {
    "reference": "Patient/123820084",
    "display": "Immun, Test1"
  }
}
```

performer: array

performer

Indicates who performed the immunization event.

Example:

```
{
  "performer": [
    {
      "function": {
        "coding": [
          {
            "system": "http://terminology.hl7.org/CodeSystem/v2-0443",
            "code": "AP",
            "display": "Administering Provider"
          }
        ],
        "text": "Administering Provider"
      },
      "actor": {
        "reference": "Practitioner/7750958",
        "display": "Doe, John"
      }
    }
  ]
}
```

primarySource: boolean

An indication that the content of the record is based on information from the person who administered the vaccine.

Note:

* Set to true if not specified.

* For a create action, should not be set to true when reportOrigin is populated.

* For an update action, should not be set to true.

Example:

```
{
  "primarySource": true
}
```

reportOrigin: object

reportOrigin

The source of an immunization record when not reported by the person who administered the vaccine. Should not be supplied when is set to .

Note:

primarySource

true

Example:

```
{
  "reportOrigin": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30200",
        "code": "20738688",
        "display": "Primary Care Provider",
        "userSelected": false
      }
    ],
    "text": "Primary Care Provider"
  }
}
```

* resourceType(required): string Allowed Values: [ "Immunization" ] The type of the FHIR resource.

route: object

route

The path by which the vaccine product was taken into the body.

Example:

```
{
  "route": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/4001",
        "code": "318167",
        "display": "IM",
        "userSelected": false
      }
    ],
    "text": "IM"
  }
}
```

site: object

site

The body site where the vaccine was administered.

Example:

```
{
  "site": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/97",
        "code": "576",
        "display": "Left Arm",
        "userSelected": false
      }
    ],
    "text": "Left Arm"
  }
}
```

status(required): string

Indicates the current status of the immunization event.

Example:

```
{
  "status": "completed"
}
```

statusReason: object

statusReason

The reason the immunization was not performed. This parameter is generally only used for the status of .

Note:

not-done

Example:

```
{
  "statusReason": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30440",
        "code": "679607",
        "display": "Patient Refuses",
        "userSelected": true
      }
    ],
    "text": "Patient Refuses"
  }
}
```

vaccineCode(required): object

vaccineCode

The vaccine that was administered or was to be administered.

Example:

```
{
  "vaccineCode": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72",
        "code": "2797921",
        "display": "hepatitis A-hepatitis B vaccine",
        "userSelected": false
      }
    ],
    "text": "hepatitis A-hepatitis B vaccine"
  }
}
```

```

            "type":"boolean"
        }
    }
}
```

Nested Schema : doseQuantity

Type:

object

The quantity of vaccine product that was administered.

Example:

```
{
  "doseQuantity": {
    "value": 1.5,
    "unit": "mL",
    "system": "http://unitsofmeasure.org",
    "code": "mL"
  }
}
```

Show Source

* code: string

* system: string

* unit: string

* value: number

```
{
    "description":"The quantity of vaccine product that was administered.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"doseQuantity\": {\n    \"value\": 1.5,\n    \"unit\": \"mL\",\n    \"system\": \"http://unitsofmeasure.org\",\n
        \"code\": \"mL\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "value":{
            "type":"number"
        },
        "unit":{
            "type":"string"
        },
        "system":{
            "type":"string"
        },
        "code":{
            "type":"string"
        }
    }
}
```

Nested Schema : encounter

Type:

object

The visit, admission, or other contact between the patient and healthcare provider that the immunization was part of.

Note:

* encounter is a required field to create charted immunizations.

* encounter is not a required field to create staged immunizations.

Example:

```
{
  "encounter": {
    "reference": "Encounter/36209678"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The visit, admission, or other contact between the patient and healthcare provider that the
    immunization was part of.<br>\n\n<b>Note:</b>\n<ul>\n  <li><code>encounter</code> is a required field to create
    charted immunizations.</li>\n  <li><code>encounter</code> is not a required field to create staged
    immunizations.</li>\n</ul> \n\n<b>Example:</b>\n\n<pre><code>{\n  \"encounter\": {\n    \"reference\":
    \"Encounter/36209678\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : manufacturer

Type:

object

The name of the vaccine manufacturer.

Example:

```
{
  "manufacturer": {
    "display": "Adams Laboratories"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The name of the vaccine manufacturer.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"manufacturer\": {\n
        \"display\": \"Adams Laboratories\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
```

```
        }
    }
}
```

Nested Schema : note

Type:

array

Extra information about the immunization that is not conveyed by the other attributes.

Example:

```
{
  "authorReference": {
    "reference": "Practitioner/2028012",
    "display": "Doe, Jane"
  },
  "time": "2019-06-09T14:03:26-05:00",
  "text": "Additional details"
}
```

Show Source

* Array of: object items

```
{
    "description":"Extra information about the immunization that is not conveyed by the other
    attributes.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"authorReference\": {\n    \"reference\":
    \"Practitioner/2028012\",\n    \"display\": \"Doe, Jane\"\n  },\n  \"time\": \"2019-06-09T14:03:26-05:00\",\n
    \"text\": \"Additional details\"\n}</code></pre>\n",
    "type":"array",
    "items":{
        "type":"object",
        "properties":{
            "authorReference":{
                "type":"object",
                "properties":{
                    "reference":{
                        "type":"string"
                    }
                }
            },
            "time":{
                "type":"string"
            },
            "text":{
                "type":"string"
            }
        }
    }
}
```

Nested Schema : patient

Type:

object

The patient who received or did not receive the immunization.

Example:

```
{
  "patient": {
    "reference": "Patient/123820084",
    "display": "Immun, Test1"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The patient who received or did not receive the immunization.<br>\n<b>Example:</b>\n\n<pre><code>{\n
      \"patient\": {\n    \"reference\": \"Patient/123820084\",\n    \"display\": \"Immun, Test1\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : performer

Type:

array

Indicates who performed the immunization event.

Example:

```
{
  "performer": [
    {
      "function": {
        "coding": [
          {
            "system": "http://terminology.hl7.org/CodeSystem/v2-0443",
            "code": "AP",
            "display": "Administering Provider"
          }
        ],
        "text": "Administering Provider"
      },
      "actor": {
        "reference": "Practitioner/7750958",
        "display": "Doe, John"
      }
    }
  ]
}
```

Show Source

* Array of: object items

```
{
    "description":"Indicates who performed the immunization event.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"performer\": [\n    {\n      \"function\": {\n        \"coding\": [\n          {\n            \"system\":

    \"Administering Provider\"\n          }\n        ],\n        \"text\": \"Administering Provider\"\n      },\n
    \"actor\": {\n        \"reference\": \"Practitioner/7750958\",\n        \"display\": \"Doe, John\"\n      }\n    }\n
      ]\n}</code></pre>\n",
    "type":"array",
    "items":{
        "type":"object",
        "properties":{
            "performer.function":{
                "description":"Describes the type of performance (such as ordering provider, administering provider, and
     so on).<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"function\": {\n    \"coding\": [\n      {\n        \"system\":
    \"http://terminology.hl7.org/CodeSystem/v2-0443\",\n        \"code\": \"OP\",\n        \"display\": \"Ordering
    Provider\"\n      }\n    ],\n    \"text\": \"Ordering Provider\"\n  }\n}</code></pre>\n",
                "type":"object",
                "properties":{
                    "text":{
                        "type":"string"
                    },
                    "coding":{
                        "type":"array",
                        "items":{
                            "type":"object",
                            "properties":{
                                "system":{
                                    "type":"string"
                                },
                                "code":{
                                    "type":"string"
                                }
                            }
                        }
                    }
                }
            },
            "performer.actor":{
                "description":"The practitioner or organization who performed the
    action.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"actor\": {\n    \"reference\": \"Practitioner/7750958\",\n
    \"display\": \"Doe, John\"\n  }\n}</code></pre>\n",
                "type":"object",
                "properties":{
                    "reference":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : reportOrigin

Type:

object

The source of an immunization record when not reported by the person who administered the vaccine. Should not be supplied when is set to .

Note:

primarySource

true

Example:

```
{
  "reportOrigin": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30200",
        "code": "20738688",
        "display": "Primary Care Provider",
        "userSelected": false
      }
    ],
    "text": "Primary Care Provider"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The source of an immunization record when not reported by the person who administered the
    vaccine.<br>\n\n<b>Note:</b> Should not be supplied when <code>primarySource</code> is set to
    <code>true</code>.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"reportOrigin\": {\n    \"coding\": [\n      {\n
            \"system\": \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30200\",\n
    \"code\": \"20738688\",\n        \"display\": \"Primary Care Provider\",\n        \"userSelected\": false\n      }\n
        ],\n    \"text\": \"Primary Care Provider\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : route

Type:

object

The path by which the vaccine product was taken into the body.

Example:

```
{
  "route": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/4001",
        "code": "318167",
        "display": "IM",
        "userSelected": false
      }
    ],
    "text": "IM"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The path by which the vaccine product was taken into the body.<br>\n<b>Example:</b>\n\n<pre><code>{\n
      \"route\": {\n    \"coding\": [\n      {\n        \"system\":
    \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/4001\",\n        \"code\": \"318167\",\n
            \"display\": \"IM\",\n        \"userSelected\": false\n      }\n    ],\n    \"text\": \"IM\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
```

```
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : site

Type:

object

The body site where the vaccine was administered.

Example:

```
{
  "site": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/97",
        "code": "576",
        "display": "Left Arm",
        "userSelected": false
      }
    ],
    "text": "Left Arm"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The body site where the vaccine was administered.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"site\":
    {\n    \"coding\": [\n      {\n        \"system\":
    \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/97\",\n        \"code\": \"576\",\n
    \"display\": \"Left Arm\",\n        \"userSelected\": false\n      }\n    ],\n    \"text\": \"Left Arm\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : statusReason

Type:

object

The reason the immunization was not performed. This parameter is generally only used for the status of .

Note:

not-done

Example:

```
{
  "statusReason": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30440",
        "code": "679607",
        "display": "Patient Refuses",
        "userSelected": true
```

```
      }
    ],
    "text": "Patient Refuses"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The reason the immunization was not performed.<br>\n\n<b>Note:</b> This parameter is generally only
    used for the status of <code>not-done</code>.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"statusReason\": {\n

                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : vaccineCode

Type:

object

The vaccine that was administered or was to be administered.

Example:

```
{
  "vaccineCode": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72",
        "code": "2797921",
        "display": "hepatitis A-hepatitis B vaccine",
        "userSelected": false
      }
    ],
    "text": "hepatitis A-hepatitis B vaccine"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The vaccine that was administered or was to be administered.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"vaccineCode\": {\n    \"coding\": [\n      {\n        \"system\":
    \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72\",\n        \"code\": \"2797921\",\n
            \"display\": \"hepatitis A-hepatitis B vaccine\",\n        \"userSelected\": false\n      }\n    ],\n
    \"text\": \"hepatitis A-hepatitis B vaccine\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
```

```
            }
        }
    }
}
```

Nested Schema : items

Type:

object

Show Source

* authorReference: object authorReference

* text: string

Type:

object

Show Source

* reference: string

```
{
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : items

Type:

object

Show Source

performer.actor: object

performer.actor

The practitioner or organization who performed the action.

Example:

```
{
  "actor": {
    "reference": "Practitioner/7750958",
    "display": "Doe, John"
  }
}
```

performer.function: object

performer.function

Describes the type of performance (such as ordering provider, administering provider, and so on).

Example:

```
{
  "function": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v2-0443",
        "code": "OP",
        "display": "Ordering Provider"
      }
    ],
```

```
    "text": "Ordering Provider"
  }
}
```

```
{
    "type":"object",
    "properties":{
        "performer.function":{
            "description":"Describes the type of performance (such as ordering provider, administering provider, and so
    on).<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"function\": {\n    \"coding\": [\n      {\n        \"system\":

```

ETag

If-Match

Headers

* Etag: string For Update or Patch versioning controls. Related to If-Match. When a resource performs an operation that creates or updates a record, an Etag value is returned as a header. This same value should be included in request headers as an If-Match for any subsequent update to that record.

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# Get a list of immunizations

File: r4-rest-api-v32/op-immunization-get.html

Retrieves a list of immunizations that meet supplied query parameters.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Query Parameters

_id: string

The logical resource ID. Example:

* This parameter is required if the patient parameter is not used.

* May be provided with a single reference or a comma-separated list of references. Example: _id=M1234 or _id=M1234,M5678.

* Must not be provided with any other parameters except with _revinclude as indicated below.

M12345

_lastUpdated: string

The date on which the immunization was last updated. Example: or

* May be provided with only a single reference, and must use the gt or ge prefix.

* The time component is optional.

* The date and _lastUpdated parameters may not be provided together.

_lastUpdated=gt2014-09-24

_lastUpdated=gt2014-09-24T12:00:00.000Z

_revinclude: string

The Provenance resource entries that are returned as part of the bundle.

* May be provided once with the Provenance:target value. Example: _revinclude=Provenance:target.

* May be provided with the _id or patient parameter. Example: _id=M17255835&_revinclude=Provenance:target.

* When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding with the authorization type, such as user/Provenance.read, patient/Provenance.read, or system/Provenance.read.

date: string

The date range for the immunization administration or administrations. Example:

* For a single date occurrence:

* Must be provided with the le or ge prefix to search for vaccination record administrations earlier or later than the given date.

* The time component is optional.

* For two date occurrences:

* Must be provided with le and ge prefixes to search for vaccination records within a specific range.

* The time component is optional but must be consistent. If one date has a time component, so must the other.

date=ge2020-01-01T08:00:00.000Z&date=le2020-01-31T17:00:00.000Z

patient: string

The patient for the vaccination record. Example:

* This parameter is required if the _id parameter is not used.

* May be provided with only a single reference. A comma-separated list is not supported.

12345

target-disease: string

The target disease that the dose is being administered against. Searching by Millennium proprietary codes is not supported. Example:

`http://hl7.org/fhir/sid/cvx|213`

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example search for immunization records by patient.

Example Request:

`GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Immunization?patient=12724066`

Example Response:

# Get an immunization by ID

File: r4-rest-api-v32/op-immunization-id-get.html

Retrieves an individual immunization by the associated immunization ID.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example retrieval of an immunization record.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Immunization/M197197986
```

Example Response:

```
{
    'resourceType': 'Immunization',
    'id': 'M197197986',

# Update an immunization

File: r4-rest-api-v32/op-immunization-id-put.html

Updates an immunizations.

Note: Only the body fields mentioned below are supported. Unsupported fields are ignored or can result in errors.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

### Request

Supported Media Types

* application/fhir+json

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* If-Match(required): string The current version of the Immunization resource.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

The body of the update operation

Root Schema : ImmunizationUpdate

Type:

object

A summary representation of the update (PUT) operation for an immunization.

Show Source

doseQuantity: object

doseQuantity

The quantity of vaccine product that was administered.

Example:

```
{
  "doseQuantity": {
    "value": 1.5,
    "unit": "mL",
    "system": "http://unitsofmeasure.org",
    "code": "mL"
  }
}
```

encounter(required): object

encounter

The visit, admission, or other contact between the patient and healthcare provider the immunization was part of.

Example:

```
{
  "encounter": {
    "reference": "Encounter/36209678"
  }
}
```

expirationDate: string

The date when the vaccine batch expires.

Example:

```
{
  "expirationDate": "2019-07-30"
}
```

id(required): string

The logical ID of the resource.

Example:

```
{
  "id": "M43434511"
}
```

lotNumber: string

The lot number of the vaccine product.

Example:

```
{
  "lotNumber": "123ab",
}
```

manufacturer: object

manufacturer

The name of the vaccine manufacturer.

Example:

```
{
  "manufacturer": {
    "display": "Adams Laboratories"
  }
}
```

note: array

note

Extra information about the immunization that is not conveyed by the other attributes.

Example:

```
{
  "authorReference": {
    "reference": "Practitioner/2028012",
    "display": "Doe, Jane"
  },
  "time": "2019-06-09T14:03:26-05:00",
  "text": "Additional details"
}
```

occurrenceDateTime(required): string

The date when the vaccine was administered or to be administered.

Example:

```
{
  "occurrenceDateTime": "2019-07-05T10:35:00-05:00"
}
```

patient(required): object

patient

The patient who received or did not receive the immunization.

Example:

```
{
  "patient": {
    "reference": "Patient/123820084",
    "display": "Immun, Test1"
  }
}
```

performer: array

performer

Indicates who performed the immunization event.

Example:

```
{
  "performer": [
    {
      "function": {
        "coding": [
          {
            "system": "http://terminology.hl7.org/CodeSystem/v2-0443",
            "code": "AP",
            "display": "Administering Provider"
          }
        ],
        "text": "Administering Provider"
      },
      "actor": {
        "reference": "Practitioner/7750958",
        "display": "Doe, John"
      }
    }
  ]
}
```

primarySource: boolean

An indication that the content of the record is based on information from the person who administered the vaccine.

Note:

* Set to true if not specified.

* For a create action, should not be set to true when reportOrigin is populated.

* For an update action, should not be set to true.

Example:

```
{
  "primarySource": true
}
```

reportOrigin: object

reportOrigin

The source of an immunization record when not reported by the person who administered the vaccine. Should not be supplied when is set to true.

Note:

primarySource

Example:

```
{
  "reportOrigin": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30200",
        "code": "20738688",
        "display": "Primary Care Provider",
        "userSelected": false
      }
    ],
    "text": "Primary Care Provider"
  }
}
```

* resourceType(required): string Allowed Values: [ "Immunization" ] The type of the FHIR resource.

route: object

route

The path by which the vaccine product was taken into the body.

Example:

```
{
  "route": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/4001",
        "code": "318167",
        "display": "IM",
        "userSelected": false
      }
    ],
    "text": "IM"
  }
}
```

site: object

site

The body site where the vaccine was administered.

Example:

```
{
  "site": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/97",
        "code": "576",
        "display": "Left Arm",
        "userSelected": false
      }
    ],
    "text": "Left Arm"
  }
}
```

status(required): string

Indicates the current status of the immunization event.

Example:

```
{
  "status": "completed"
}
```

statusReason: object

statusReason

The reason why the immunization was not performed. This parameter is generally only used for the status of .

Note:

not-done

Example:

```
{
  "statusReason": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30440",
        "code": "679607",
        "display": "Patient Refuses",
        "userSelected": true
      }
    ],
    "text": "Patient Refuses"
  }
}
```

vaccineCode(required): object

vaccineCode

The vaccine that was administered or will be administered.

Example:

```
{
  "vaccineCode": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72",
        "code": "2797921",
        "display": "hepatitis A-hepatitis B vaccine",
        "userSelected": false
      }
    ],
    "text": "hepatitis A-hepatitis B vaccine"
  }
}
```

            "type":"boolean"
        }
    }
}
```

Nested Schema : doseQuantity

Type:

object

The quantity of vaccine product that was administered.

Example:

```
{
  "doseQuantity": {
    "value": 1.5,
    "unit": "mL",
    "system": "http://unitsofmeasure.org",
    "code": "mL"
```

```
  }
}
```

Show Source

* code: string

* system: string

* unit: string

* value: number

```
{
    "description":"The quantity of vaccine product that was administered.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"doseQuantity\": {\n    \"value\": 1.5,\n    \"unit\": \"mL\",\n    \"system\": \"http://unitsofmeasure.org\",\n
        \"code\": \"mL\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "value":{
            "type":"number"
        },
        "unit":{
            "type":"string"
        },
        "system":{
            "type":"string"
        },
        "code":{
            "type":"string"
        }
    }
}
```

Nested Schema : encounter

Type:

object

The visit, admission, or other contact between the patient and healthcare provider the immunization was part of.

Example:

```
{
  "encounter": {
    "reference": "Encounter/36209678"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The visit, admission, or other contact between the patient and healthcare provider the immunization
    was part of.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"encounter\": {\n    \"reference\": \"Encounter/36209678\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : manufacturer

Type:

object

The name of the vaccine manufacturer.

Example:

```
{
  "manufacturer": {
    "display": "Adams Laboratories"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The name of the vaccine manufacturer.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"manufacturer\": {\n
        \"display\": \"Adams Laboratories\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : note

Type:

array

Extra information about the immunization that is not conveyed by the other attributes.

Example:

```
{
  "authorReference": {
    "reference": "Practitioner/2028012",
    "display": "Doe, Jane"
  },
  "time": "2019-06-09T14:03:26-05:00",
  "text": "Additional details"
}
```

Show Source

* Array of: object items

```
{
    "description":"Extra information about the immunization that is not conveyed by the other
    attributes.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"authorReference\": {\n    \"reference\":
    \"Practitioner/2028012\",\n    \"display\": \"Doe, Jane\"\n  },\n  \"time\": \"2019-06-09T14:03:26-05:00\",\n
    \"text\": \"Additional details\"\n}</code></pre>\n",
    "type":"array",
    "items":{
        "type":"object",
        "properties":{
            "authorReference":{
                "type":"object",
                "properties":{
                    "reference":{
                        "type":"string"
                    }
                }
            },
            "time":{
                "type":"string"
            },
            "text":{
                "type":"string"
            }
        }
    }
}
```

Nested Schema : patient

Type:

object

The patient who received or did not receive the immunization.

Example:

```
{
  "patient": {
    "reference": "Patient/123820084",
    "display": "Immun, Test1"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The patient who received or did not receive the immunization.<br>\n<b>Example:</b>\n\n<pre><code>{\n
      \"patient\": {\n    \"reference\": \"Patient/123820084\",\n    \"display\": \"Immun, Test1\"\n
    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : performer

Type:

array

Indicates who performed the immunization event.

Example:

```
{
  "performer": [
    {
      "function": {
        "coding": [
          {
```

```
            "system": "http://terminology.hl7.org/CodeSystem/v2-0443",
            "code": "AP",
            "display": "Administering Provider"
          }
        ],
        "text": "Administering Provider"
      },
      "actor": {
        "reference": "Practitioner/7750958",
        "display": "Doe, John"
      }
    }
  ]
}
```

Show Source

* Array of: object items

```
{
    "description":"Indicates who performed the immunization event.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"performer\": [\n    {\n      \"function\": {\n        \"coding\": [\n          {\n            \"system\":

                            "properties":{
                                "system":{
                                    "type":"string"
                                },
                                "code":{
                                    "type":"string"
                                }
                            }
                        }
                    }
                }
            },
            "performer.actor":{
                "description":"The practitioner or organization who performed the
    action.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"actor\": {\n    \"reference\": \"Practitioner/7750958\",\n
    \"display\": \"Doe, John\"\n  }\n}</code></pre>\n",
                "type":"object",
                "properties":{
                    "reference":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : reportOrigin

Type:

object

The source of an immunization record when not reported by the person who administered the vaccine. Should not be supplied when is set to true.

Note:

primarySource

Example:

```
{
  "reportOrigin": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30200",
        "code": "20738688",
```

```
        "display": "Primary Care Provider",
        "userSelected": false
      }
    ],
    "text": "Primary Care Provider"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The source of an immunization record when not reported by the person who administered the
    vaccine.<br>\n\n<b>Note:</b> Should not be supplied when <code>primarySource</code> is set to

        }
    }
}
```

Nested Schema : route

Type:

object

The path by which the vaccine product was taken into the body.

Example:

```
{
  "route": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/4001",
        "code": "318167",
        "display": "IM",
        "userSelected": false
      }
    ],
    "text": "IM"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The path by which the vaccine product was taken into the body.<br>\n<b>Example:</b>\n\n<pre><code>{\n
      \"route\": {\n    \"coding\": [\n      {\n        \"system\":

                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
```

```
                    }
                }
            }
        }
    }
}
```

Nested Schema : site

Type:

object

The body site where the vaccine was administered.

Example:

```
{
  "site": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/97",
        "code": "576",
        "display": "Left Arm",
        "userSelected": false
      }
    ],
    "text": "Left Arm"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The body site where the vaccine was administered.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"site\":

    }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "text":{
            "type":"string"
        },
        "coding":{
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : statusReason

Type:

object

The reason why the immunization was not performed. This parameter is generally only used for the status of .

Note:

not-done

Example:

```
{
  "statusReason": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/30440",
        "code": "679607",
        "display": "Patient Refuses",
        "userSelected": true
      }
    ],
    "text": "Patient Refuses"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The reason why the immunization was not performed.<br>\n\n<b>Note:</b> This parameter is generally
    only used for the status of <code>not-done</code>.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"statusReason\": {\n

                }
            }
        }
    }
}
```

Nested Schema : vaccineCode

Type:

object

The vaccine that was administered or will be administered.

Example:

```
{
  "vaccineCode": {
    "coding": [
      {
        "system": "https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72",
        "code": "2797921",
        "display": "hepatitis A-hepatitis B vaccine",
        "userSelected": false
      }
    ],
    "text": "hepatitis A-hepatitis B vaccine"
  }
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The vaccine that was administered or will be administered.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"vaccineCode\": {\n    \"coding\": [\n      {\n        \"system\":
    \"https://fhir.cerner.com/ec2458f2-1e24-41c8-b71b-0e701af7583d/codeSet/72\",\n        \"code\": \"2797921\",\n
            \"display\": \"hepatitis A-hepatitis B vaccine\",\n        \"userSelected\": false\n      }\n    ],\n
    \"text\": \"hepatitis A-hepatitis B vaccine\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{

        },
        "text":{
            "type":"string"
        }
    }
}
```

Nested Schema : authorReference

Type:

object

Show Source

* reference: string

```
{
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : items

Type:

object

Show Source

performer.actor: object

performer.actor

The practitioner or organization who performed the action.

Example:

```
{
  "actor": {
    "reference": "Practitioner/7750958",
    "display": "Doe, John"
  }
}
```

performer.function: object

performer.function

Describes the type of performance (such as ordering provider, administering provider, and so on).

Example:

```
{
  "function": {
    "coding": [
      {
        "system": "http://terminology.hl7.org/CodeSystem/v2-0443",
        "code": "OP",
        "display": "Ordering Provider"
      }
    ],
    "text": "Ordering Provider"
  }
}
```

```
{
    "type":"object",
    "properties":{
        "performer.function":{
            "description":"Describes the type of performance (such as ordering provider, administering provider, and so
    on).<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"function\": {\n    \"coding\": [\n      {\n        \"system\":
```

```
    \"http://terminology.hl7.org/CodeSystem/v2-0443\",\n        \"code\": \"OP\",\n        \"display\": \"Ordering
    Provider\"\n      }\n    ],\n    \"text\": \"Ordering Provider\"\n  }\n}</code></pre>\n",
            "type":"object",
            "properties":{
                "text":{
                    "type":"string"
                },
                "coding":{
                    "type":"array",
                    "items":{

```

ETag

If-Match

Headers

* Etag: string For Update or Patch versioning controls. Related to If-Match. When a resource performs an operation that creates or updates a record, an Etag value is returned as a header. This same value should be included in request headers as an If-Match for any subsequent update to that record.

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# InsurancePlan

File: r4-rest-api-v32/api-insuranceplan.html

### Description

InsurancePlan

This topic describes information for the InsurancePlan resource.

Overview

The InsurancePlan resource is used to describe a health insurance offering and returns a list of details, such as who owns and administers the plan, the plan's coverage area, and contact information.

The following fields are returned if valued:

InsurancePlan ID

Status

Type

Name

Period

OwnedBy

Terminology Bindings

InsurancePlan.type

Details: Insurance Plan Type

System: http://terminology.hl7.org/CodeSystem/insurance-plan-type

Details: For more information, see Code Set 27137 Health Plan Service Type under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/27137

InsurancePlan

The operations from the InsurancePlan category.

Get a list of insurance plans

Method: get Path: /InsurancePlan

Get an insurance plan by ID

Method: get Path: /InsurancePlan/{ID}

# Get a list of insurance plans

File: r4-rest-api-v32/op-insuranceplan-get.html

Retrieves a list of insurance plans that meet supplied query parameters.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Query Parameters

_id: string

The logical resource ID. Example:

* This parameter is required if the owned-by parameter is not used.

* May be provided with a single value or a comma-separated list of references. Example: _id=12345 or _id=12345,67890.

* May not be provided with owned-by.

_id=1234

owned-by: string

The organization associated with the insurance plan. Example:

* This parameter is required if the _id parameter is not used.

* Must be provided only once.

* May not be provided with _id.

owned-by=Organization/5678

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

# Get an insurance plan by ID

File: r4-rest-api-v32/op-insuranceplan-id-get.html

Retrieves an individual insurance plan by the associated ID.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example retrieval of a insurance plan record by resource ID.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/InsurancePlan/2798233
```

Example Response:

```
{
    'resourceType': 'InsurancePlan',
    'id': '589723',
    'text': {
      'status': 'generated',

# Location

File: r4-rest-api-v32/api-location.html

### Description

Location

This topic describes information for the Location resource.

Overview

The Location resource describes physical places where healthcare services are provided. In Oracle Health Millennium Platform, facilities are the top level of the patient location hierarchy. A facility is also an Organization resource that is associated with patient locations. All facilities are organizations, but not all organizations are facilities. A location can also be an ambulatory patient care area such as a clinic or an emergency room. The location hierarchy from highest to lowest is facility, building, nursing unit, room, and bed.

This resource supports the US Core Location Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0.

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site.

Note:

Fields

Location ID

Status

Name

Alias

Identifier

Mode

Telecom

Address

Physical Type

Managing Organization

Part Of

* Extensions including custom attribute (for more information, see the Custom Extensions section of this topic)

Terminology Bindings

Location.identifier.type

Description: The type used to determine which identifier to use for a specific purpose.

Details: For more information, see Code Set ##### XXXXX under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/73

Location.physicalType

Description: The physical form of the location.

Details: Location physicalType

System: https://terminology.hl7.org/CodeSystem/location-physical-type

Details: For more information, see Code Set 222 Location Type under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/222

Location.extension[x].extension[x].valueCodeableConcept

Description: The value of the client-defined custom attribute. This binding is used for the custom-attribute-value extension nested under custom-attribute extensions.

Note:

* The terminology binding only applies when the custom-attribute-value extension is of the CodeableConcept type.

* The value of the custom attribute is not limited to a single code set or nomenclature.

Details: For more information, see the Proprietary Codes section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/<code set>

Details: For more information, see Nomenclature under the Proprietary Systems section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/nomenclature

Location.status

Description: The status of the location.

Details: Active location

Details: Inactive location

Location.mode

Description: An indication of whether a resource instance represents a specific location or a class of locations.

Details: Instance

Location.telecom

Description: The contact details of communication devices available at the location. This information can include phone numbers, fax numbers, mobile numbers, email addresses and web sites.

Details: Location Telecom System

Location.type

Description: A distinction between physical addresses (those you can visit) and mailing addresses (for example, PO Boxes and care-of addresses). Most addresses are both.

Details: Location Address Type

Location.use

Description: The purpose of this address.

Details: Location Address Use

Custom Extensions

All URLs for custom extensions are defined as https://fhir-ehr.cerner.com/r4/StructureDefinition/{id}.

Table - Custom Extensions

ID | Value[x} Type | Description
custom-attribute | None (contains nested extensions) | A client-defined custom attribute for the resource. Attribute values can be the following types: integer, string, or CodeableConcept.

Location

The operations from the Location category.

Get a list of locations

Method: get Path: /Location

Get a location by ID

Method: get Path: /Location/{ID}

# Get a list of locations

File: r4-rest-api-v32/op-location-get.html

Retrieves a list of locations that meet supplied query parameters.

### Request

Query Parameters

-physicalType: string

The location's physical type. Searching by Millennium proprietary codes is not supported. This parameter is required if the parameter is not used. Example:

_id

`http://terminology.hl7.org/CodeSystem/location-physical-type|ro`

* _count: string The maximum number of results to return. Default: 100

* _id: string The logical resource ID. This parameter is required if the -physicalType parameter is not used.

* address: string Part of the location's address. Example: 123%20Main

* address-city: string The city specified in the address. Must include the address-state or address-postalcode parameter. Example: Kansas

* address-postalcode: string The postal code specified in the address. Example: 64111

* address-state: string The state specified in the address. Example: MO

* identifier: string The location's identifier. Example: 653385|FSI^~BUILD^~NU

* name: string The portion of the location's name or alias. Must include any of the following parameters: -physicalType, identifier, address, address-state, address-city, or address-postalcode. Example: Main

* organization: string The organization that manages the location. Must include any of the following parameters: -physicalType, identifier, address, address-state, address-city, or address-postalcode. Example: 675844

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

# Get a location by ID

File: r4-rest-api-v32/op-location-id-get.html

Retrieves an individual location by the associated location ID.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

# Media

File: r4-rest-api-v32/api-media.html

### Description

Media

This topic describes information for the Media resource.

Overview

The Media resource represents a photo, video, or audio recording acquired or used in healthcare. The content of the resource is provided inline as a Base64 encoded string in the Media.content.data field.

This resource is currently referenced in the DiagnosticReport resource.

Oracle recommends requesting Media resources only after obtaining links to the resources through references from DiagnosticReport. Starting a workflow with Media resources is not recommended.

The following fields are returned if valued:

* Media ID

* Status

Subject

* Reference (Patient)

Content

* Attachment ContentType

* Attachment Data

* Attachment Size

Terminology Bindings

Media.status

Description: The current state of the Media resource.

Details: EventStatus

System: http://hl7.org/fhir/ValueSet/event-status

Media

The operations from the Media category.

Get media by ID

Method: get Path: /Media/{ID}

# Get media by ID

File: r4-rest-api-v32/op-media-id-get.html

Retrieves individual media content by the associated media ID.

Note: This media is linked from the DiagnosticReport resource and should be accessed using the exact link given in the referring resource. Modifying the link has undefined consequences.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

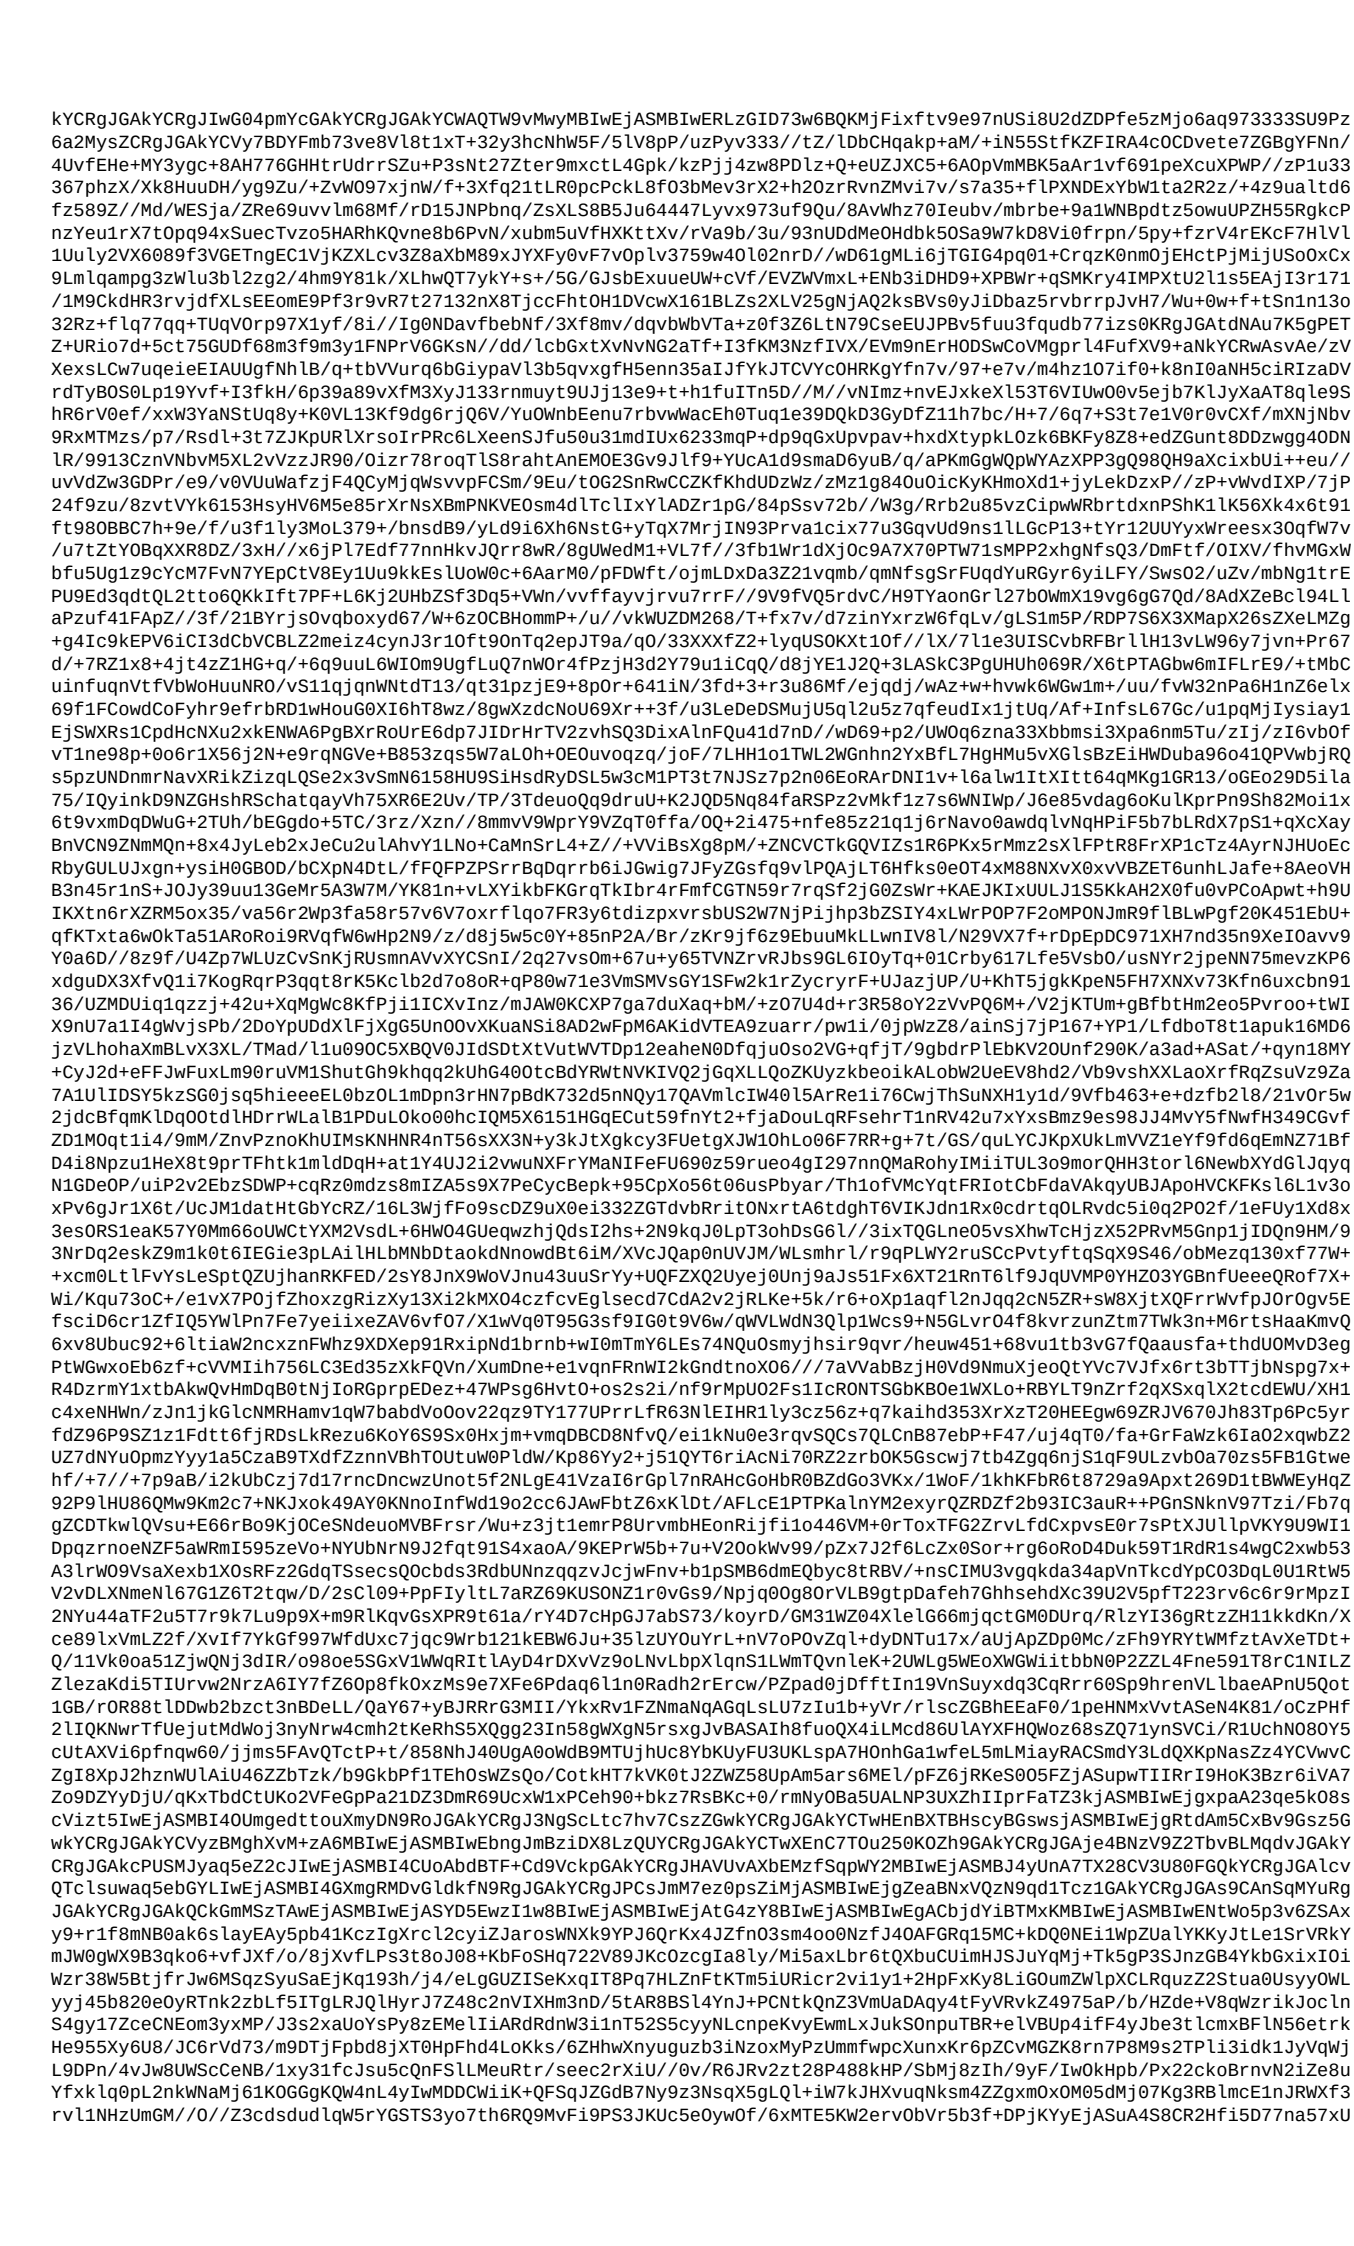

Example retrieval of a media record by resource ID.

Example Request:

```
GET https://fhir-
    open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/Media/drm197704684-InpBMTk3NzA0Njg0QjE5NzcwNDY4OEMi
```

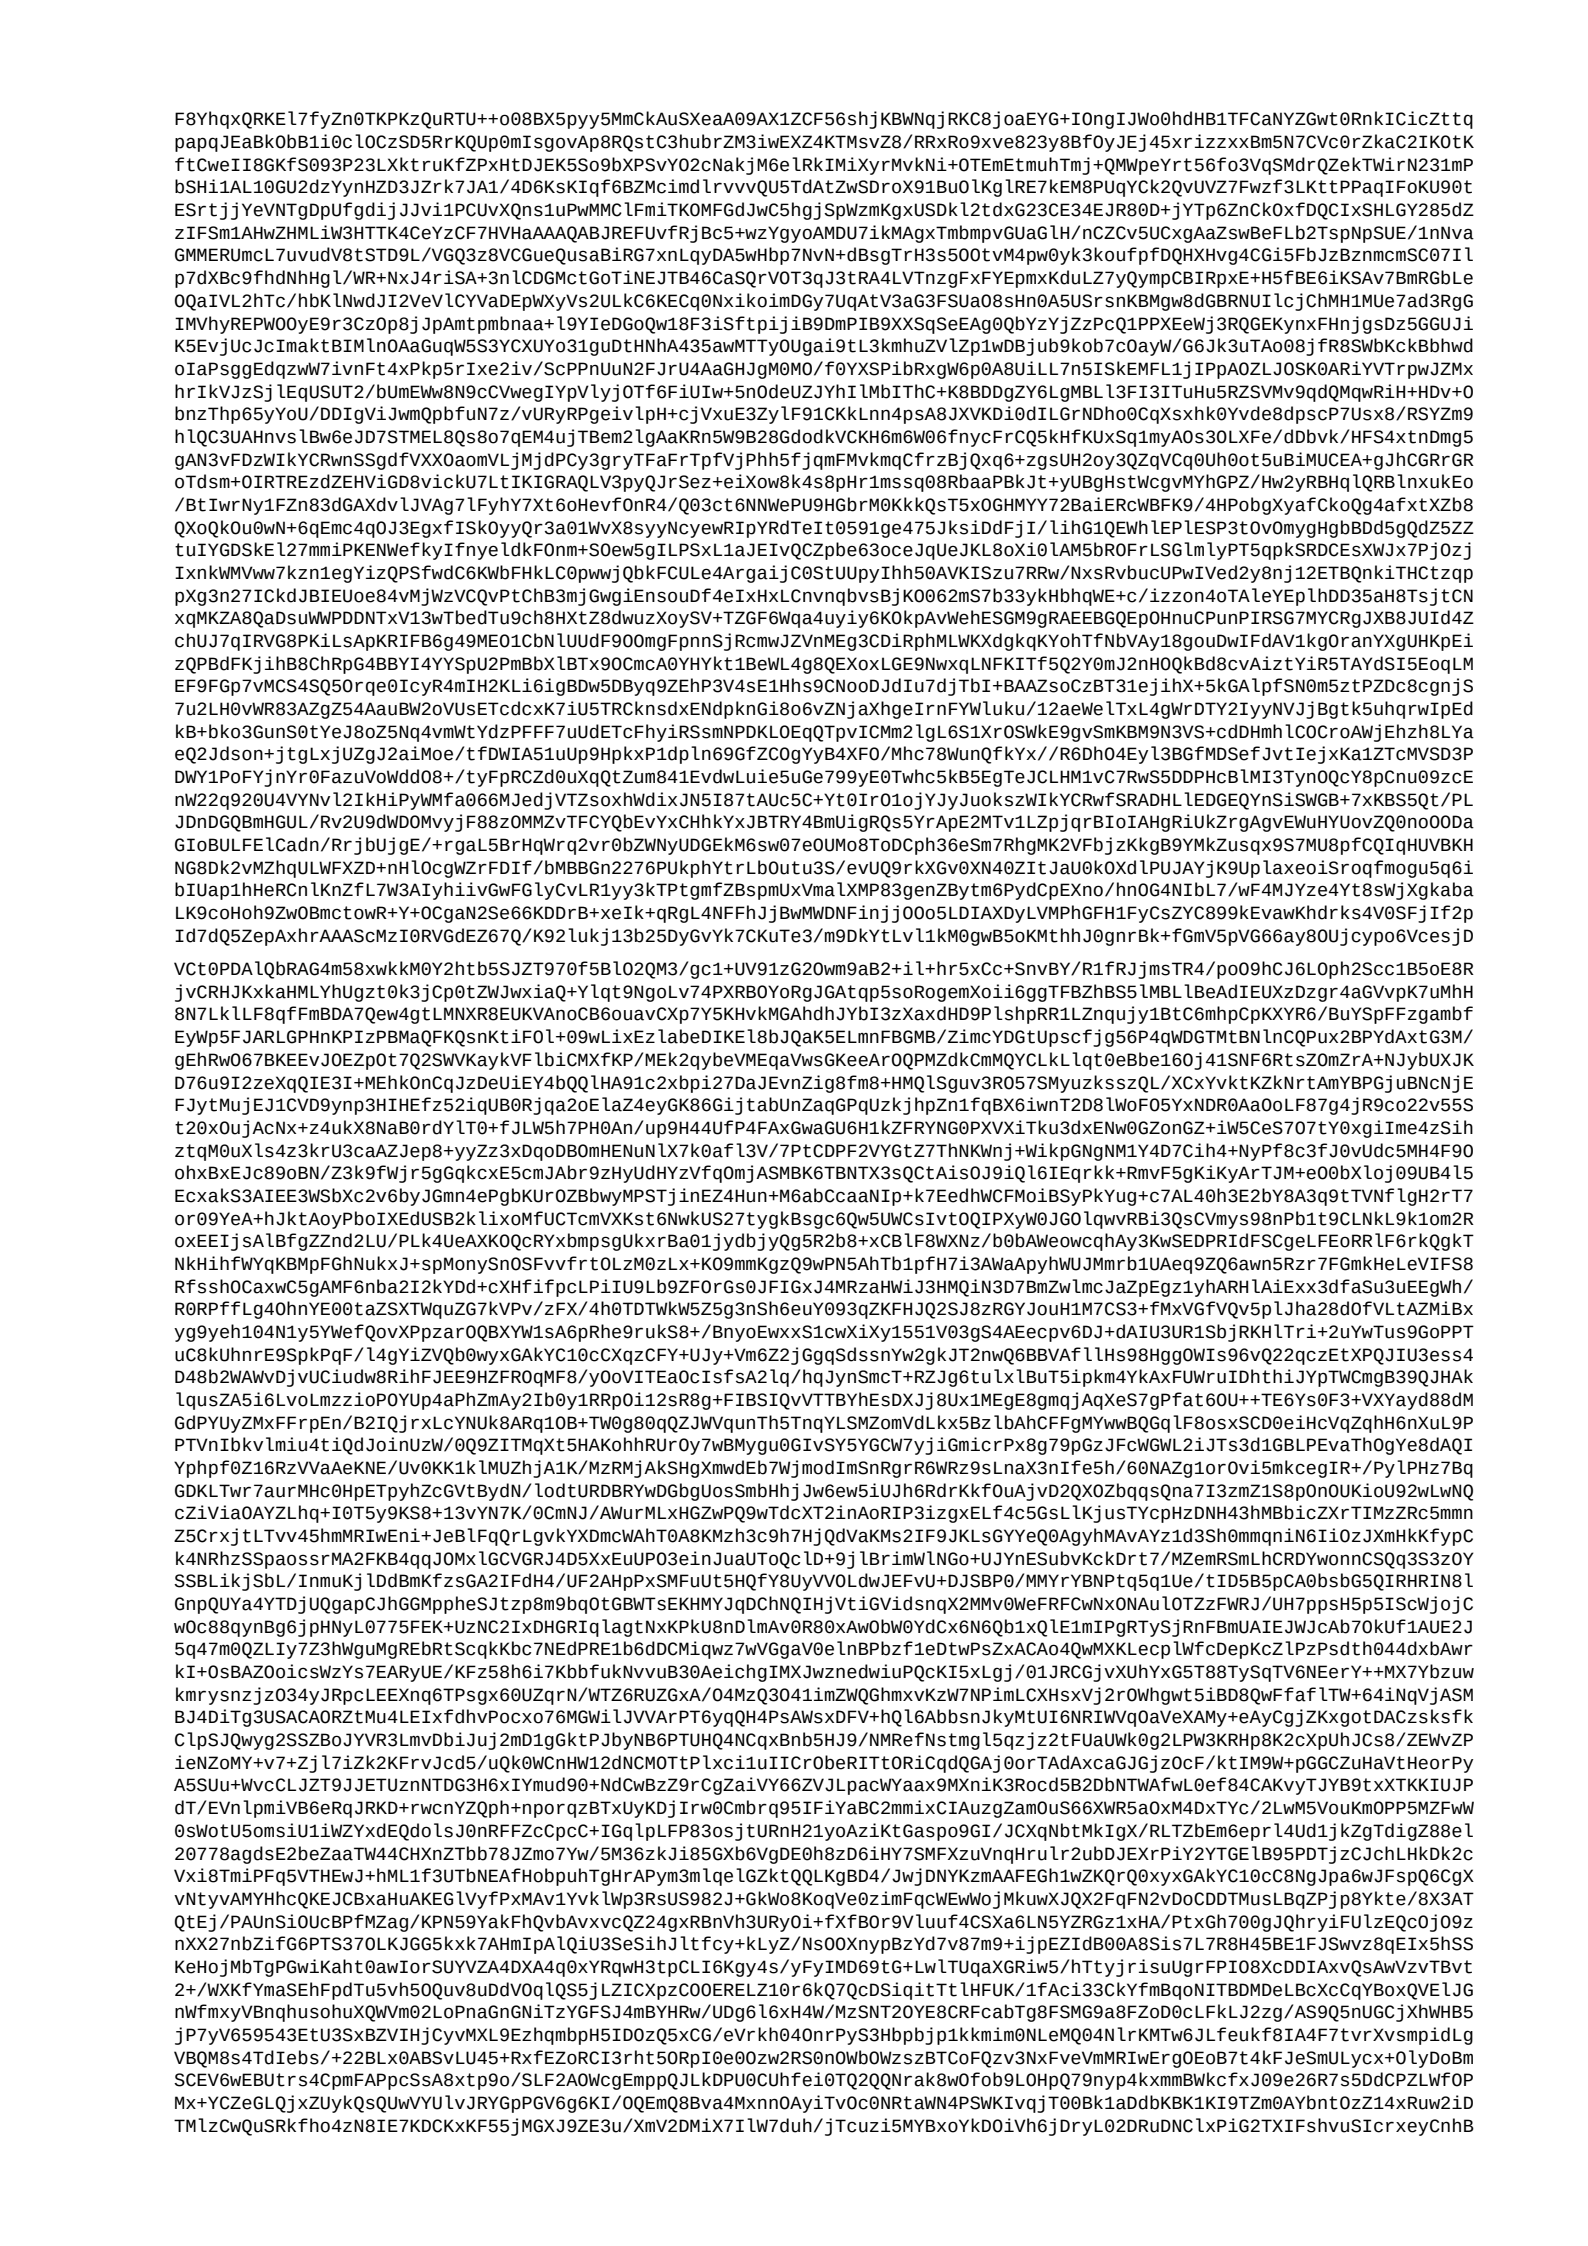

Example Response:

```
{
    'resourceType': 'Media',
    'id': 'drm197704684-InpBMTk3NzA0Njg0QjE5NzcwNDY4OEMi',

# MedicationAdministration

File: r4-rest-api-v32/api-medicationadministration.html

### Description

MedicationAdministration

This topic describes information for the MedicationAdministration resource.

Overview

The MedicationAdministration resource provides information about medications administered to a patient or consumed by a patient including injections, intravenous solutions, and self-administered oral medications. You can use this resource to search for full administration details for vaccinations administered by the current healthcare system. For historically

administered vaccines, or vaccines administered by other healthcare disciplines, care settings, or regions, you must use the Immunization resource to create or retrieve information.

Important: Infuse or bolus administration results for continuous infusion orders may require additional calculations to determine the actual amount of medication administered per ingredient. An additional calculation is required when the dosage dose does not equal the contained medication ingredient strength denominator. In this case, calculate the ratio between the ingredient's numerator divided by the denominator and multiply by dosage dose. This result is the actual amount of medication administered.

The following fields are returned if valued:

MedicationAdministration ID

Infuse Over Time Extension (for more information, see the Extensions section of this topic)

Status

StatusReason

Medication

Subject

Effective

Performer

Request

Note

Dosage

Body Site

Route

Dose

Rate

MedicationAdministration.medication may be a reference to a contained medication when the medication cannot be represented by a CodeableConcept because it contains a unique combination of ingredients. Medications in the system always exist in the context of a medication administration and cannot be referenced independently.

Terminology Bindings

MedicationAdministration.status

Description: The medication administration status.

Details: MedicationAdministration Status

System: http://terminology.hl7.org/CodeSystem/medication-admin-status

MedicationAdministration.statusReason

Description: A code indicating why the administration was not performed.

Details: MedicationAdministration Status Reason Codes

System: http://snomed.info/sct

MedicationAdministration.medicationCodeableConcept

Description: A code that defines the medication that was administered.

Details: RxNorm

System: http://www.nlm.nih.gov/research/umls/rxnorm

MedicationAdministration.performer.function

Description: Distinguishes the peformer's type of involvement in the medication administration.

Details: Medication administration performer function codes

System: http://terminology.hl7.org/CodeSystem/med-admin-perform-function

MedicationAdministration.dosage.site

Description: A coded specification of the anatomic site where the medication first entered the body.

Details: SNOMED CT

System: http://snomed.info/sct

MedicationAdministration.dosage.route

Description: The route or physiological path of administration of a therapeutic agent into or onto the body of a subject.

Details: SNOMED CT

System: http://snomed.info/sct

Contained Medication Bindings

Medication.code

Description: A code that defines the medication.

Details: RxNorm

System: http://www.nlm.nih.gov/research/umls/rxnorm

Extensions

All URLs for custom extensions are defined as https://fhir-ehr.cerner.com/r4/StructureDefinition/{id}

Table - Extensions

ID | Value[x] Type | Description
infuse-over-time | Quantity | The length of time in minutes it took to infuse a medication.

MedicationAdministration

The operations from the MedicationAdministration category.

Get a list of medication administrations

Method: get Path: /MedicationAdministration

Get a medication administration by ID

Method: get Path: /MedicationAdministration/{ID}

# Get a list of medication administrations

File: r4-rest-api-v32/op-medicationadministration-get.html

Retrieves a list of medication administrations that meet supplied query parameters.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Query Parameters

* _count: string The maximum number of results to include on a page. Example: _count=50

_id: string

The logical resource ID. Example:

* This parameter is required if the patient parameter is not used.

* May be a list separated by commas.

* Must not be provided with any other parameters.

_id=12345

effective-time: string

A date range for when the administration happened. Example:

* For a single effective-time occurrence:

* Must be provided with a ge, gt, le, or lt prefix to imply the date range for an administrations search.

* The time component is required.

* Example: effective-time=ge2014-05-19T20:54:02.000Z

* For two effective-time occurences:

* Must be provided once with the le or lt prefix, and once with the ge or gt prefix to search for administrations within the given upper and lower timestamps, respectively.

* The time component is required for both parameters.

* Example: effective-time=ge2014-05-19T20:54:02.000Z&effective-time=le2014-05-20T20:54:02.000Z

effective-time=ge2014-05-19T20:54:02.000Z

* patient: string The specific patient to return medication administrations for. This parameter is required if the _id parameter is not used. Example: patient=1234

* performer: string The logical resource ID of the practitioner who administered the medication. May be a list separated by commas. Example: performer=1245,7659

* status: string The status of the medication administration event. May be a list separated by commas. The supported status values are completed, not-done, and entered-in-error. Example: status=completed,not-done

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

# Get a medication administration by ID

File: r4-rest-api-v32/op-medicationadministration-id-get.html

Retrieves an individual medication administration by the associated ID.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example retrieval of a medication administration record by resource ID.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/MedicationAdministration/197287785
```

Example Response:

```
{

# MedicationDispense

File: r4-rest-api-v32/api-medicationdispense.html

### Description

MedicationDispense

This topic describes information for the MedicationDispense resource.

Overview

The MedicationDispense resource indicates that a medication product is to be or has been dispensed for a named person or patient. This information includes a description of the medication product (supply) provided and the instructions for administering the medication. The medication dispense is the result of a pharmacy system responding to a medication order.

This resource supports the US Core MedicationDispense Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0.

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site.

Note:

The following fields are returned if valued:

MedicationDispense ID

Status

Status Reason

Category

Medication

Subject

Context

Performer

* Actor

Location

AuthorizingPrescription

Type

Quantity

DaysSupply

WhenPrepared

WhenHandedOver

Dosage Instruction

Text

Timing

asNeeded

Route

DoseAndRate

Substitution

* wasSubstituted

MedicationDispense.medication may be a reference to a contained medication when the medication cannot be represented by a CodeableConcept because it contains a unique combination of ingredients. Medications in the system exist in the context of a medication dispense and cannot be referenced independently.

Terminology Bindings

MedicationDispense.status

Description: The medication dispense status.

Details: MedicationDispense Status

System: http://terminology.hl7.org/CodeSystem/medication-dispense-status

MedicationDispense.statusReasonCodeableConcept

Description: A code indicating why the dispense was not performed.

Details: MedicationDispense Status Reason Codes

System: http://terminology.hl7.org/fhir/CodeSystem/medicationdispense-status-reason

Details: For more information, see Code Set 4031 Reason for Medication under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4031

MedicationDispense.medicationCodeableConcept

Description: A code that defines the medication that was dispensed.

Details: RxNorm

System: http://www.nlm.nih.gov/research/umls/rxnorm

MedicationDispense.category

Description: A code that indicates the type of medication dispense.

Details: MedicationDispense Category Codes

System: http://terminology.hl7.org/fhir/CodeSystem/medicationdispense-category

Details: For more information, see Code Set 4500 Pharmacy Types under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4500

MedicationDispense.type

Description: A code that indicates the type of dispensing event that is performed.

Details: ActPharmacySupplyType

System: http://terminology.hl7.org/CodeSystem/v3-ActCode

MedicationDispense.dosageInstruction.timing.code

Description: A code for a known or defined timing pattern.

Details: TimingAbbreviation

System: http://terminology.hl7.org/CodeSystem/v3-GTSAbbreviation

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 4003 Frequency under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4003

MedicationDispense.dosageInstruction.asNeeded[x]

Description: Indicates whether the medication is only taken when needed or the preconditions for taking the medication.

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 4005 Reason for Medication under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4005

MedicationDispense.dosageInstruction.route

Description: The route or physiological path of administration of a therapeutic agent into or onto the body of a subject.

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 4001 Medication Administration Route under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4001

Contained Medication Bindings

Medication.code

Description: A code that defines the medication.

Details: RxNorm

System: http://www.nlm.nih.gov/research/umls/rxnorm

Medication.form

Description: A code that describes the form of the item (powder, tablets, capsule, and so on).

Details: SNOMEDCTFormCodes

System: http://hl7.org/fhir/ValueSet/medication-form-codes

Details: For more information, see Code Set 4002 Form under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4002

MedicationDispense

The operations from the MedicationDispense category.

Get a list of medication dispenses

Method: get Path: /MedicationDispense

Get a medication dispense by ID

Method: get Path: /MedicationDispense/{ID}

# Get a list of medication dispenses

File: r4-rest-api-v32/op-medicationdispense-get.html

Retrieves a list of medication dispenses that meet supplied query parameters.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Query Parameters

* _count: string The maximum number of results to include on a page. Example: _count=50

_id: string

The logical resource ID. Example:

* This parameter is required if the patient parameter is not used.

* May be a list separated by commas.

* Must not be provided with any other parameters.

_id=12345

_lastUpdated: string

The date and time used to search for medication dispenses that were last updated on or after the provided value. Example:

* Only a single value is supported. Ranges (multiple values) are not supported.

* Only the ge and gt prefixes are supported.

* Cannot be used together with date. If both are provided, date is ignored.

_lastUpdated=ge2024-01-01T00:00:00Z

_revinclude: string

The Provenance resource entries to be returned as part of the bundle. Example:

* May be provided once with the Provenance:target value. Example: _revinclude=Provenance:target.

* May be provided with the _id or patient parameters. Example: _id=214938095&_revinclude=Provenance:target.

* When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding with the authorization type, such as user/Provenance.read, patient/Provenance.read, or system/Provenance.read.

_revinclude=Provenance:target

date: string

The date and time when medication dispenses were handed over. Example:

* Only a single value is supported. Ranges (multiple values) are not supported.

* Only the ge and gt prefixes are supported.

* Cannot be used together with _lastUpdated. If both are provided, date is ignored.

date=ge2024-01-15T10:00:00Z

* patient: string The specific patient to return medication dispenses for. This parameter is required if the _id parameter is not used. Example: patient=1234

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example search by .

patient

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/MedicationDispense?patient=12621984
```

# Get a medication dispense by ID

File: r4-rest-api-v32/op-medicationdispense-id-get.html

Retrieves an individual medication dispense by the associated ID.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example retrieval of a medication dispense record by resource ID.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/MedicationDispense/5142939
```

Example Response:

```
{
        'resourceType': 'MedicationDispense',
        'id': '5142939',
        'meta': {
            'versionId': '0',

# MedicationRequest

File: r4-rest-api-v32/api-medicationrequest.html

### Description

MedicationRequest

This topic describes information for the MedicationRequest resource.

Overview

The MedicationRequest resource provides orders for all medications with administration instructions for a patient in both the inpatient and outpatient settings (orders or prescriptions filled by a pharmacy and discharge medication orders). This resource also includes a patient's historical or documented home medications reported by the patient, significant other, or another provider.

If the medication request represents a prescription the patient takes at home, then the start, stop, and other information may not be a representation of when the medication was taken. For example, the system may not know if the patient ever filled or took the prescribed medication, or when the prescription was filled. Documented historical, past, and home medications are commonly captured when taking the patient's medical history.

This resource supports the US Core MedicationRequest Profile from HL7 FHIR US Core Implementation Guide STU 6.1.0.

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site. The field is present only for confidential resources.

Note:

meta.security

The following fields are returned if valued:

MedicationRequest ID

Extensions (for more information, see the Extensions section of this topic)

Extensions

All URLs for custom extensions are defined as https://fhir-ehr.cerner.com/r4/StructureDefinition/{id}

ID | Value[x] Type | Description
clinical-instruction | String | Extension to MedicationRequest.dosageInstruction. Represents instructions for an order that are intended for healthcare providers.
pharmacy-verification-status | CodeableConcept | Represents whether a medication request was verified by a pharmacist. Supported values are Does not need pharmacy verification, Needs pharmacy verification, or Rejected by pharmacy.

Sweden Extensions

All URLs for Swedish extensions are defined as http://electronichealth.se/fhir/StructureDefinition/{id}

ID | Value[x] Type | Description
MedicationRequest.extension.nllRegistrationBasis | Coding | The format when the prescription was registered.
MedicationRequest.extension.nllPrescriptionFormat | Coding | The current prescription format.
MedicationRequest.extension.nllPatientTreatmentReason | String | The treatment reason described for the patient.
MedicationRequest.extension.nllUsageDates.usageStartDate | Date | The date when the patient should start using the medication.
MedicationRequest.extension.nllUsageDates.usageEndDate | Date | The date when the patient should stop using the medication.
MedicationRequest.extension.nllTreatmentDates.treatmentEndDate | Date | The treatment end date.
MedicationRequest.extension.nllTreatmentDates.treatmentReviewDate | Date | The treatment review date.
MedicationRequest.note.extension.nllMedReqNoteType | String | The type of note.
MedicationRequest.dispenseRequest.extension.nllPrescriptionCommunicableDiseasesAct | Boolean | The prescription according to the Communicable Diseases Act.
MedicationRequest.dispenseRequest.extension.nllConditionsPharmaceuticalBenefitsAct | Boolean | The pharmaceutical benefits act conditions.
MedicationRequest.dispenseRequest.extension.nllPatientPharmaceuticalBenefitsAct | Boolean | The patient eligible for benefits.
MedicationRequest.dispenseRequest.extension.nllNumberOfPackagesPrescribed | positiveInt | The number of packages prescribed per dispense.
MedicationRequest.dispenseRequest.extension.nllNumberOfDispensesAllowed | unsignedInt | The number of dispenses allowed.
MedicationRequest.dispenseRequest.extension.nllDosePackaging | Boolean | The dose dispensed prescription.
MedicationRequest.dispenseRequest.validityPeriod.extension.nllFirstDispenseBefore | Date | The date before which the first dispense must occur.
MedicationRequest.dosageInstruction.extension.nllSiteQualifier | CodeableConcept | A more precise administration site.
MedicationRequest.dosageInstruction.extension.nllMedicalDevice | CodeableConcept | The medical device to use for administration.

MedicationRequest

The operations from the MedicationRequest category.

Create a medication request

Method: post Path: /MedicationRequest

Get a list of medication requests

Method: get Path: /MedicationRequest

Get a medication request by ID

Method: get Path: /MedicationRequest/{ID}

Patch a medication request

Method: patch Path: /MedicationRequest/{ID}

# Create a medication request

File: r4-rest-api-v32/op-medicationrequest-post.html

Creates an individual medication request.

Note: Only the body fields mentioned below are supported. Unsupported fields are ignored or can result in errors.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

### Request

Supported Media Types

* application/fhir+json

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

* content-type(required): string Specifies the content type of the request entity body.

Body ()

The body of the create operation.

Root Schema : MedicationRequestCreate

Type:

object

A summary representation of the create (POST) operation for a medication request.

Show Source

* dispenseRequest: object dispenseRequest The medication supply authorization.

doNotPerform: boolean

Indicates whether the provider is asking for the medication request not to occur. If provided, must be set to .

Note:

false

Example:

```
{
  "doNotPerform": false
}
```

* dosageInstruction: string Indicates how the medication is to be used by the patient. Note: Can only be provided once.

dosageInstruction.additionalInstruction: string

The supplemental instruction or warnings to the patient. If provided, can only be provided once. Only is supported.

Note:

text

Example:

```
{
  "dosageInstruction": [
    {
      "additionalInstruction": [
        {
          "text": "Take with food."
        }
      ]
    }
  ]
}
```

dosageInstruction.asNeeded[x]:

Indicates whether the medication is only taken when needed or the preconditions for taking the medication. When providing the field, and the field is provided, and must be provided together.

Note:

asNeededCodeableConcept

coding

system

code

Example:

```
{
  "dosageInstruction": [
    {
      "asNeededBoolean": true
    }
  ]
}
```

```
{
  "dosageInstruction": [
    {
      "asNeededCodeableConcept": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "25064002"
          }
        ],
        "text": "For headaches"
      }
    }
  ]
}
```

* dosageInstruction.doseAndRate: string How the drug should enter the body. Note: Can only be provided once.

dosageInstruction.doseAndRate.dose[x]:

The amount of medication per dose. Must be of type . Must contain the and fields if either are provided.

Note:

SimpleQuantity

system

code

Example:

```
{
  "dosageInstruction": [
    {
      "doseAndRate": [
        {
          "doseQuantity": {
            "value": 5,
            "unit": "tabs",
            "system": "http://unitsofmeasure.org",
            "code": "tbl"
          }
        }
      ]
    }
  ]
}
```

dosageInstruction.route: object

dosageInstruction.route

The route or physiological path of administration of a therapeutic agent into or onto the body of a subject.

Note:

* If provided, only the coding field is supported.

* When the coding field is provided, system and code must be provided together.

Example:

```
{
  "dosageInstruction": [
    {
      "route": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "41974700"
          }
        ]
      }
    }
  ]
}
```

dosageInstruction.site: object

dosageInstruction.site

The anatomic site where the medication first enters the body.

Note:

* If provided, only the coding field is supported.

* When the coding field is provided, system and code must be provided together.

Example:

```
{
  "dosageInstruction": [
    {
      "site": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "368208006"
          }
        ]
      }
    }
  ]
}
```

dosageInstruction.text: string

The free-text dosage instructions.

Example:

```
{
  "dosageInstruction": [
    {
      "text": "5 mL, Oral, Daily."
    }
  ]
}
```

* dosageInstruction.timing: string When the medication should be administered.

dosageInstruction.timing.code: object

dosageInstruction.timing.code

Code for a known or defined timing pattern.

Note:

* If provided, only the coding field is supported.

* When the coding field is provided, system and code must be provided together.

Example:

```
{
  "dosageInstruction": [
    {
      "timing": {
        "code": {
          "coding": [
            {
              "system": "http://terminology.hl7.org/CodeSystem/v3-GTSAbbreviation",
              "code": "BID"
            }
          ]
        }
      }
    }
  ]
}
```

* dosageInstruction.timing.repeat: string When the event is to occur.

dosageInstruction.timing.repeat.bounds[x]:

The outer bounds for start and end limits of the timing schedule.

Example:

```
{
  "dosageInstruction": [
    {
      "timing": {
        "repeat": {
          "boundsPeriod": {
            "start": "2020-03-03T20:07:53Z",
            "end": "2021-03-03T20:07:53Z"
          }
        }
      }
    }
  ]
}
```

dosageInstruction.timing.repeat.count: string

The number of times to repeat.

Example:

```
{
  "dosageInstruction": [
    {
      "timing": {
        "repeat": {
          "count": 1
        }
      }
    }
  ]
}
```

dosageInstruction.timing.repeat.duration: string

How long when it happens. If provided, must be provided.

Note:

durationUnit

Example:

```
{
  "dosageInstruction": [
    {
      "timing": {
        "repeat": {
          "duration": 1,
          "durationUnit": "d"
        }
      }
    }
  ]
}
```

dosageInstruction.timing.repeat.durationUnit: string

The units of time for the duration. If provided, must be provided.

Note:

duration

Example:

```
{
  "dosageInstruction": [
    {
      "timing": {
        "repeat": {
          "duration": 5,
          "durationUnit": "h"
        }
      }
    }
  ]
}
```

encounter: object

encounter

The that this medication request was created for or associated with.

encounter

Example:

```
{
  "encounter": {
    "reference": "Encounter/1621910"
  }
}
```

intent(required): string

Whether the request is a proposal, plan, or an original order.

Note:

* When creating a medication request, the intent must be order or plan.

* When read back, the created medication request always has an intent of order or plan. The reported field can be used to determine if a medication is an authorization or a medication reported by a patient. Medication requests with intents of order and plan are supported in accordance with the changes to the US Core Profile.

Example:

```
{
  "intent": "order"
}
```

medication[x](required):

A code that defines the medication Must be of type CodeableConcept. Either , or one with a and must be provided.

Note:

text

coding

system

code

Example:

```
 {
  "medicationCodeableConcept": {
    "coding": [
      {
        "system": "http://www.nlm.nih.gov/research/umls/rxnorm",
        "code": "352362"
      }
    ],
    "text": "Acetaminophen"
  }
}
```

* meta: object meta The MedicationRequest metadata.

note: object

note

Information about the medication request.

Example:

```
{
  "note": [
    {
      "authorString": "Leslie Knope",
      "time": "2020-03-03T20:07:53Z",

  ]
}
```

reported[x](required):

Indicates if this record was captured as a secondary record rather than as an original primary source-of-truth record. Must be of type boolean and must be set to .

reported

Note:

true

Example:

```
{
  "reportedBoolean": true
}
```

* resourceType(required): string Allowed Values: [ "MedicationRequest" ] The type of the FHIR resource.

status(required): string

The current state of the medication request. When creating a new medication request, the status must be .

Note:

active

Example:

```
{
  "status": "active"
}
```

subject(required):

A link to a resource representing the person or set of individuals to whom the medication will be given. Must be a reference.

Note:

Patient

Example:

```
{
  "subject": {
    "reference": "Patient/12742400"
  }
}
```

```

    }\n}</code></pre>\n"
                        }
                    }
                }
            }
        }
    }
}
```

Nested Schema : dispenseRequest

Type:

object

The medication supply authorization.

Show Source

dispenseRequest.numberOfRepeatsAllowed: string

The number of refills authorized.

Example:

```
{
  "dispenseRequest": {
    "numberOfRepeatsAllowed": 5
  }
}
```

dispenseRequest.quantity: object

dispenseRequest.quantity

The amount of medication to supply per dispense.

Note:

* Must contain the system and code fields if either are provided.

* The unit field is not supported.

Example:

```
{
  "dispenseRequest": {
    "quantity": {
      "value": 12,
      "system": "http://unitsofmeasure.org",
      "code": "tbl"
    }
  }
}
```

* substitution: object substitution Any restrictions on medication substitution.

```
{
    "description":"The medication supply authorization.\n",

    }\n}</code></pre>\n"
                }
            }
        }
    }
}
```

Nested Schema : dosageInstruction.route

Type:

object

The route or physiological path of administration of a therapeutic agent into or onto the body of a subject.

Note:

* If provided, only the coding field is supported.

* When the coding field is provided, system and code must be provided together.

Example:

```
{
  "dosageInstruction": [
    {
      "route": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "41974700"
          }
        ]
      }
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The route or physiological path of administration of a therapeutic agent into or onto the body of a

                }
            }
        }
    }
}
```

Nested Schema : dosageInstruction.site

Type:

object

The anatomic site where the medication first enters the body.

Note:

* If provided, only the coding field is supported.

* When the coding field is provided, system and code must be provided together.

Example:

```
{
  "dosageInstruction": [
    {
      "site": {
        "coding": [
          {
            "system": "http://snomed.info/sct",
            "code": "368208006"
          }
        ]
      }
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"The anatomic site where the medication first enters the body.<br>\n\n<b>Note:</b>\n<ul>\n  <li>If
    provided, only the <code>coding</code> field is supported.</li>\n  <li>When the <code>coding</code> field is

                    "system":{
                        "type":"string"
                    },
                    "code":{
                        "type":"string"
```

```
                }
            }
        }
    }
}
```

Nested Schema : dosageInstruction.timing.code

Type:

object

Code for a known or defined timing pattern.

Note:

* If provided, only the coding field is supported.

* When the coding field is provided, system and code must be provided together.

Example:

```
{
  "dosageInstruction": [
    {
      "timing": {
        "code": {
          "coding": [
            {
              "system": "http://terminology.hl7.org/CodeSystem/v3-GTSAbbreviation",
              "code": "BID"
            }
          ]
        }
      }
    }
  ]
}
```

Show Source

* coding: array coding

* text: string

```
{
    "description":"Code for a known or defined timing pattern.<br>\n\n<b>Note:</b>\n<ul>\n  <li>If provided, only the

                        "type":"string"
                    },
                    "code":{
                        "type":"string"
                    }
                }
            }
        }
    }
}
```

Nested Schema : encounter

Type:

object

The that this medication request was created for or associated with.

encounter

Example:

```
{
  "encounter": {
    "reference": "Encounter/1621910"
  }
}
```

Show Source

* reference: string

```
{
    "description":"The <a target=\"_blank\" href=\"https://hl7.org/fhir/R4/encounter.html\"><code>encounter</code></a>
    that this medication request was created for or associated with.<br>\n<b>Example:</b>\n\n<pre><code>{\n
    \"encounter\": {\n    \"reference\": \"Encounter/1621910\"\n  }\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "reference":{
            "type":"string"
        }
    }
}
```

Nested Schema : meta

Type:

object

The MedicationRequest metadata.

Show Source

* security: array security The MedicationRequest confidentiality.

```
{
    "description":"The MedicationRequest metadata.",
    "type":"object",
    "properties":{
        "security":{
            "description":"The MedicationRequest confidentiality.",
            "type":"array",
            "items":{
                "type":"object",
                "properties":{
                    "system":{
                        "description":"The confidentiality system.",
                        "type":"string",
                        "example":"http://terminology.hl7.org/CodeSystem/v3-ActCode"
                    },
                    "code":{
                        "description":"The confidentiality label.",
                        "type":"string",
                        "example":"PHY"
                    }
                }
            }
        }
    },
    "example":"{\n  \"security\": [\n    {\n      \"system\": \"http://terminology.hl7.org/CodeSystem/v3-ActCode\",\n
          \"code\": \"PHY\"\n    },\n    {\n      \"system\": \"http://terminology.hl7.org/CodeSystem/v3-ActCode\",\n
          \"code\": \"PRS\"\n    }\n  ]\n}\n"
}
```

Example:

```
{
  "security": [
    {
      "system": "http://terminology.hl7.org/CodeSystem/v3-ActCode",
      "code": "PHY"
    },
    {
      "system": "http://terminology.hl7.org/CodeSystem/v3-ActCode",
      "code": "PRS"
    }
  ]
}
```

Nested Schema : note

Type:

object

Information about the medication request.

Example:

```
{
  "note": [
    {
      "authorString": "Leslie Knope",
      "time": "2020-03-03T20:07:53Z",
      "text": "Patient has had medication in past."
    }
  ]
}
```

Show Source

* authorReference: object authorReference

* text: string

* time: string

```
{
    "description":"Information about the medication request.<br>\n<b>Example:</b>\n\n<pre><code>{\n  \"note\": [\n
    {\n      \"authorString\": \"Leslie Knope\",\n      \"time\": \"2020-03-03T20:07:53Z\",\n      \"text\": \"Patient
    has had medication in past.\"\n    }\n  ]\n}</code></pre>\n",
    "type":"object",
    "properties":{
        "authorReference":{
            "type":"object",
            "properties":{
                "reference":{
                    "type":"string"
                }
            }
        },
        "time":{
            "type":"string"
        },
        "text":{
            "type":"string"
        }
    }
}
```

Nested Schema : dispenseRequest.quantity

Type:

object

The amount of medication to supply per dispense.

Note:

* Must contain the system and code fields if either are provided.

* The unit field is not supported.

Example:

```
{
  "dispenseRequest": {
    "quantity": {
      "value": 12,
      "system": "http://unitsofmeasure.org",
      "code": "tbl"
    }
  }
}
```

Show Source

* code: string

* system: string

* unit: string

* value: number

```
{
    "description":"The amount of medication to supply per dispense.<br>\n\n<b>Note:</b>\n<ul>\n  <li>Must contain the
    <code>system</code> and <a target=\"_blank\"
    href=\"https://hl7.org/fhir/R4/datatypes.html#code\"><code>code</code></a> fields if either are provided.</li>\n

    "type":"object",
    "properties":{
        "value":{
            "type":"number"
        },
        "unit":{
            "type":"string"
        },
        "system":{
            "type":"string"
        },
        "code":{
            "type":"string"
        }
    }
}
```

Nested Schema : substitution

Type:

object

Any restrictions on medication substitution.

Show Source

substitution.allowed[x]:

Whether substitution is allowed. Only a type of is supported.

Note:

boolean

Example:

```
{
  "substitution": {
    "allowedBoolean": true
  }
}
```

```
{
    "description":"Any restrictions on medication substitution.\n",
    "type":"object",
    "properties":{
        "substitution.allowed[x]":{
            "description":"Whether substitution is allowed.<br>\n\n<b>Note:</b> Only a type of <a target=\"_blank\"
    href=\"https://hl7.org/fhir/R4/datatypes.html#boolean\"><code>boolean</code></a> is
    supported.<br>\n\n<b>Example:</b>\n\n<pre><code>{\n  \"substitution\": {\n    \"allowedBoolean\": true\n
    }\n}</code></pre>\n"
        }
    }
}
```

Nested Schema : coding

Type:

array

Show Source

* Array of: object items

```
{
    "type":"array",
    "items":{
        "type":"object",
        "properties":{

ETag

If-Match

Headers

* Etag: string For Update or Patch versioning controls. Related to If-Match. When a resource performs an operation that creates or updates a record, an Etag value is returned as a header. This same value should be included in request headers as an If-Match for any subsequent update to that record.

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# Get a list of medication requests

File: r4-rest-api-v32/op-medicationrequest-get.html

Retrieves a list of medication requests that meet supplied query parameters.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Query Parameters

-timing-boundsPeriod: string

The date and time that should fall within the when the medication should be given to the patient. Example:

dosageInstruction.timing.repeat.boundsPeriod

* Must be provided with a ge prefix to imply the date range for the medications search.

* The time component is optional.

-timing-boundsPeriod=ge2014-05-19T20:54:02.000Z

* _count: number The maximum number of results to include on a page. Example: _count=50

_id: string

The logical resource ID. Example:

* This parameter is required if the patient parameter is not used.

* Must not be provided with any other parameters, except with the _revinclude parameter as indicated below.

_id=1234

_lastUpdated: string

The date and time range within which the most recent clinically relevant update was made to the medication. Example:

* For a single _lastUpdated occurence:

* Must be provided with a le or ge prefix to imply the date range for the medications search.

* Example: _lastUpdated=ge2014-05-19T20:54:02.000Z

* For two _lastUpdated occurences:

* Must be provided with the le and ge prefixes to search for medications within the given upper and lower timestamps, respectively.

* Example: _lastUpdated=ge2014-05-19T20:54:02.000Z&_lastUpdated=le2014-05-20T12:00:00.000Z

* The time component is required.

_lastUpdated=ge2014-05-19T20:54:02.000Z

_revinclude: string

The Provenance resource entries to be returned as part of the bundle. Example:

* May be provided once with the Provenance:target value. Example: _revinclude=Provenance:target.

* May be provided with the _id or patient parameter. Example: _id=74771957,4732066&_revinclude=Provenance:target.

* When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding with the authorization type, such as user/Provenance.read, patient/Provenance.read, or system/Provenance.read.

_revinclude=Provenance:target

* intent: string Whether the medication is an authorization or a medication reported by a patient. Example: intent=order,plan

* patient: string The specific patient to return medication requests for. This parameter is required if the _id parameter is not used. Example:patient=5678

* status: string The status of the medication. May be a list separated by commas. Example: status=active,completed

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example search by patient.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/MedicationRequest?patient=12742400
```

Example Response:

```

# Get a medication request by ID

File: r4-rest-api-v32/op-medicationrequest-id-get.html

Retrieves an individual medication request by the associated ID.

Authorization Types

This operation supports the following authorization types:

* Provider

* Patient

* System

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

Example retrieval.

Example Request:

```
GET https://fhir-open.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/MedicationRequest/56770371
```

Example Response:

```

# Patch a medication request

File: r4-rest-api-v32/op-medicationrequest-id-patch.html

Patch an existing medication request.

Note:

* This implementation follows the JSON PATCH specification.

* Only operations on the paths listed below are supported.

Authorization Types

This operation supports the following authorization types:

* Provider

* System

Patch Operations

Path | Operation | Value Type
/status | replace | code
Description: The status of the MedicationRequest Example: { "op": "replace", "path": "/status", "value": "stopped" } Note: Only the stopped and cancelled statuses are supported. The stopped status indicates that the medication was stopped before all scheduled administrations occurred. The cancelled status indicates that the first instance was never administered. Use the dosageInstruction.timing.repeat.boundsPeriod.start field to determine if the stopped or cancelled status is most appropriate. If the field is in the past, then use the stopped status; otherwise, use the cancelled status. If you use stopped when the cancelled status is most appropriate, the status is updated to cancelled. If you use cancelled when the stopped status is most appropriate, the status is updated to stopped. Only historical documented medications in Millennium can have their status updated. To identify these medications, you can use the following query parameters to filter the medication request: MedicationRequest.intent = order MedicationRequest.category = patientspecified & community MedicationRequest.reportedBoolean = true

### Request

Supported Media Types

* application/fhir+json

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* If-Match(required): string The current version of the MedicationRequest resource.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

content-type(required): string

Specifies the content type of the request entity body.

Example: application/json-patch+json

Body ()

The body of the patch operation.

Root Schema : MedicationRequestPatch

Type:

array

Minimum Number of Items:

A summary representation of the patch (PATCH) operation for a medication request.

Show Source

* Array of: object items

```
{
```

```
    "description":"A summary representation of the patch (PATCH) operation for a medication request.",

        }
    }
}
```

Back to Top

### Response

Supported Media Types

* application/json-patch+json

### Default Response

The response header indicates the current version to use on a subsequent update.

Example Request:

```
PATCH https://fhir-ehr.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/MedicationRequest/1621910
```

Example Request Body:

```
[
    {
      'op': 'replace',
      'path': '/status',
      'value': 'stopped'
    }
  ]
```

Example Response:

```
  Cache-Control: no-cache
  Content-Length: 0
  Content-Type: application/fhir+json
  Date: Tue, 26 Mar 2019 15:42:29 GMT
  Etag: W/"10"
```

```
Last-Modified: Tue, 26 Mar 2019 15:42:27 GMT
Vary: Origin
X-Request-Id: 11111111-1111-1111-1111-111111111111
opc-request-id: /11111111111111111111111111111111/11111111111111111111111111111111
```

ETag

If-Match

Headers

* Etag: string For Update or Patch versioning controls. Related to If-Match. When a resource performs an operation that creates or updates a record, an Etag value is returned as a header. This same value should be included in request headers as an If-Match for any subsequent update to that record.

* X-Request-Id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the X-Request-Id, if present.

* opc-request-id: string Unique Oracle-assigned identifier for the request. If you need to contact Oracle about a particular request, provide the opc-Request-Id, if present.

# NutritionOrder

File: r4-rest-api-v32/api-nutritionorder.html

### Description

NutritionOrder

This topic describes information for the NutritionOrder resource.

Overview

The NutritionOrder resource returns requests or orders to supply a diet or supplement to a patient.

The examples provided here are non-normative and replaying them in the public sandbox is not guaranteed to yield the results shown on the site. The field is present only for confidential resources.

Note:

Terminology Bindings

NutritionOrder.status

Description: The status of the nutrition order.

Details: Request Status

System: http://hl7.org/fhir/request-status

NutritionOrder.intent

Description: The degree of authority or intentionality associated with the order.

Details: Request Intent

System: http://hl7.org/fhir/request-intent

NutritionOrder.foodPreferenceModifier

Description: Information about a patient's food preference.

Details: For more information, see Code Set 6102 Dietary Modifiers under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/6102

Details: For more information, see Code Set 6103 Beverage Modifiers under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/6103

NutritionOrder.oralDiet.type

Description: The type of diet or dietary restriction.

Details: SNOMED CT

System: http://snomed.info/sct

NutritionOrder.oralDiet.schedule

Description: A code for a known or defined timing pattern.

Details: TimingAbbreviation

System: https://hl7.org/fhir/r4/v3/GTSAbbreviation/cs.html

Details: SNOMED CT

System: http://snomed.info/sct

Details: For more information, see Code Set 4003 Frequency under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/4003

NutritionOrder.oralDiet.texture.modifier

Description: Texture modifications that should be made for solid food.

Details: For more information, see Code Set 100197 Diet Consistency under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/100197

NutritionOrder.oralDiet.fluidConsistencyType

Description: The required consistency of fluids served to the patient.

Details: For more information, see Code Set 100123 Beverage Consistency under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/100123

NutritionOrder.supplement.type

Description: The type of nutritional supplement required.

Details: For more information, see Code Set 6107 Dietary Supplement under the List of Code Sets section in Proprietary Codes and Systems.

System: https://fhir.cerner.com/<EHR_source_id>/codeSet/6107

NutritionOrder.meta.security

Description: These tags connect specific resources to the overall security policy and infrastructure.

Details: ValueSet

System: http://terminology.hl7.org/CodeSystem/v3-ActCode

Extensions

basedOn

NutritionOrder

The operations from the NutritionOrder category.

Get a list of nutrition orders

Method: get Path: /NutritionOrder

Get a nutrition order by ID

Method: get Path: /NutritionOrder/{ID}

# Get a list of nutrition orders

File: r4-rest-api-v32/op-nutritionorder-get.html

Retrieves a list of nutrition orders that meet the supplied query parameters.

### Request

Query Parameters

* _count: string The maximum number of nutrition orders to include on a page.

_id: string

The logical resource ID. Example:

* This parameter is required if patient is not used.

* If _id is provided, no other parameters are required.

11111111

_lastUpdated: string

An explicit or implied date and time range during which the most recent clinically relevant update was made to the nutrition order. Example:

* Must include a time and must be prefixed by ge or le.

* May be provided once with a prefix of ge or le representing the earliest date or latest date (for example, date=ge2015-01-01 or date=le2016-01-01).

* May be provided twice with the prefixes of ge and le to indicate a specific range (for example, date=ge2015-01-01&date=le2016-01-01).

ge2014-05-19T20:54:02.000Z

_revinclude: string

The Provenance resource entries to be returned as part of the bundle. Example:

* May be provided once with the Provenance:target value. Example: _revinclude=Provenance:target.

* May be provided with the _id or patient parameters. Example: _id=214938095&_revinclude=Provenance:target.

* When _revinclude is provided in a request to the closed endpoint, the OAuth2 token must include the scope corresponding with the authorization type, such as user/Provenance.read, patient/Provenance.read, or system/Provenance.read.

_revinclude=Provenance:target

* patient: string Who the nutrition order is for. This parameter is required if _id is not used. Example: 12345

* status: string The status of the nutrition order. Example: active

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

# Get a nutrition order by ID

File: r4-rest-api-v32/op-nutritionorder-id-get.html

Retrieves an individual nutrition order by the associated order ID.

### Request

Path Parameters

* ID(required): string The logical resource ID.

Header Parameters

* Authorization(required): string Contains the credentials to authenticate a consumer to the service. This should be the OAuth2 Bearer Token.

* accept(required): string The media type to be requested. See what the resource's operation produces for what is supported.

Back to Top

### Response

Supported Media Types

* application/fhir+json

### Default Response

This operation supports the following authorization types:

* Provider

* Patient

* System

Example Request:

```
GET https://fhir-ehr.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/NutritionOrder/328575687
```

Example Response:

```

### x-error-in-status Response

This operation supports the following authorization types:

* Provider

* Patient

* System

Example Request:

```
GET https://fhir-ehr.cerner.com/r4/ec2458f2-1e24-41c8-b71b-0e701af7583d/NutritionOrder/328575703
```

Example Response:

```
{
  "resourceType": "NutritionOrder",
  "id": "328575703",
  "meta": {
    "versionId": "1",
    "lastUpdated": "2021-05-03T14:38:20.000Z"
  },
  "text": {
